## FOREWORD

This publication is a 1990 directory of manufacturers and a report of round timber processed in Georgia during calendar year 1989. It is intended as a marketing guide in bringing buyer and seller together where Georgia grown or manufactured forest products are involved.

The utilization report is designed for foresters, economists, and others interested in the evaluation of timber production trends. The directory, which contains 1771 listings, will be of benefit to persons or firms seeking to buy or sell specific items.

The directory includes companies which manufacture or process wood. Pulpwood yards, naval stores facilities, and several other related business types are also included in order to make the publication more complete as a marketing aid.

Primary industries are those which use round timber, and 521 listings are in this section. Secondary industries are those using partially manufactured wood, such as lumber or plywood, as raw material. Including naval stores, 1250 listings are in the secondary section. Of the 1250, 60 were classed as both primary and secondary, due to the nature of their operations or products. Some other firms, with distinct multiple processes or product types, are also listed more than once.

Commission personnel attempt to locate and interview all qualifying companies. However, classification of some plants is questionable because of varied products or raw material. Some plants have changed name, telephone, location, or ownership. Because of these and other reasons, plants that should have been listed may have been missed. Therefore, omission of a firm is not intended as a reflection against it, nor is inclusion a recommendation.

## ACKNOWLEDGEMENT

This project required varying degrees of input from several hundred people, several different agencies, and also cooperation from companies listed. All companies were contacted with a phone call or personal visit by Forestry Commission personnel. Survey data was processed by the Forestry Commission and Southeastern Forest Experiment Station, USFS. In addition, statistics have been furnished by the Station where indicated.

## GEORGIA'S TIMBER RESOURCES<sup>1</sup>

In 1989, Georgia had 23.6 million acres in commercial forest land of a total 37.2 million acre land area. Approximately one half of the total merchantable timber volume was southern yellow pine. Species mixtures occur throughout the state, allowing pine sawmills to operate in north Georgia and hardwood sawmills to operate in south Georgia. Species distribution may not be adequately represented by a type map, so inventory summaries are presented for this purpose.

## INTRODUCTION TO UTILIZATION SECTION

In 1989, Georgia's primary wood-using industries processed sawtimber into 3.074 billion board feet of products. Of this volume, 87 percent was southern yellow pine, 12 percent was hardwoods, and 1 percent was white pine and cypress. The total 1989 production was 234 percent of 1964 volume, and 1989 yellow pine production was 289 percent of 1964.

Sawmills used 2.49 billion board feet or 81 percent of the total. Another 502 million board feet was used for veneer and plywood. Treating plants processed 56 million board feet of poles and piling, and other roundwood processors used 28 million board feet.

Production data are listed by forest survey unit to show geographic distribution of industries and timber use. This also allows comparison of previous industry surveys and to Georgia forest survey data.

## SAWMILLS

In Early 1990, 179 Georgia sawmills were in operation. Twenty one of these were portable and custom saw only. This continued a trend toward a smaller number of higher production mills which has been occurring since the 1950's. In 1950 more than 2,200 sawmills were operating in the state. Forty seven plants each produced 10,000 MBF or more during 1989 and accounted for 88 percent of the years's lumber output. Sixty five percent of 1989 lumber was manufactured by 23 mills cutting over 40,000 MBF each, and 56 percent was manufactured by 17 mills cutting 60,000 mbf or more.

<sup>1</sup> Includes Cypress.

<sup>2</sup> Includes Cypress and other softwoods.

## VENEER AND PLYWOOD

Sixteen plants produced 502 million board feet of veneer and plywood in 1989. Five southern pine plywood mills accounted for 89 percent of this. Included in the total is production of three mills which made wirebound containers and which are listed separately in the primary processors section. Three additional plants made plywood and one made containers from purchased veneer only. These four are listed only in the secondary processors section.

TABLE 7.--TIMBER PROCESSED FOR VENEER AND PLYWOOD IN GEORGIA, 1989

## TREATING PLANTS

Eighteen primary wood treating plants reported treatment of 5.6 million fence posts and 56 million board feet of poles and piling during 1989. An additional 32 companies treated lumber products only. Production from 5 white post and pole mills was not reported to avoid double counting of the volume.

TABLE 8.--VOLUME OF ROUND TIMBER TREATED IN GEORGIA, 1989

<b>Total</b>	<b>18</b>	<b>55,665</b>	<b>5,607</b>

## OTHER ROUND TIMBER PROCESSORS

In this category are 18 plants which processed 28 million board feet of round timber into products during 1989. These plants manufactured items which are not usually sold on a lumber or board foot basis. This includes 2 excelsior, 1 flooring, 2 log home, and 13 pallet mills. In addition, four oriented strand board and one parallel strand lumber plants do not have a volume included.

TABLE 9.--VOLUME PROCESSED BY OTHER ROUND TIMBER USERS IN GEORGIA, 1989

## PULPWOOD

Listed in this directory are 208 yards and dealers engaged in buying, cutting, shipping, and otherwise processing wood for use in pulp and paper manufacture. Many of these ship directly from the forest to the pulp mill with no intermediate concentration yard. Facilities codes 14 and 15 are used to identify these. Also included in the directory are 25 chip mills, of which 11 were built as portable full tree chippers.

<sup>1</sup> Data compiled by Southeastern Forest Experiment Station, USFS.

<sup>2</sup> Includes Bark from pulp mills.

## USE OF THIS DIRECTORY

Mills manufacturing round timber into products are listed in the primary processors section by mill type, county, and alphabetical order. It is the intent of this section to provide market information for persons or firms dealing in stumpage, poles, lumber, ties, etc.

Major products are listed, but some minor items may not be because the computer program is limited to six items. In some situations, such as a sawmill which also makes pallets, the firm will be listed again in the pallet section. If a treating cylinder is used, the firm will be listed also in the preservative treatment section.

Plants using lumber or other partially processed wood as a raw material are listed by plant type, county, and alphabetical order in the secondary processors section. County order listing allows location of plants in a given radius by drawing the proper size circle on one of the front section maps, and then using the county code listing inside the back cover.

To help with locating listings in this directory, both primary and secondary processor indexes list plants by type, alphabetical order, and county code. A county index lists all plants in each county by alphabetical order and page number. The fourth index lists all plants by alphabetical order and page number.

## EMPLOYMENT SIZE CLASS

A = 1 - 3	D = 20 - 49	G = 200 - 499
B = 4 - 9	E = 50 - 99	H = 500 - 999
C = 10 - 19	F = 100 - 199	J = 1000+

## FACILITIES CODE

1. Sawmill	11. Portable full tree chipper
