PREFACE

This edition of "Reclamation Repayments and Payout Schedules" supersedes the volume, "How Reclamation Pays," published as of January 1, 1947, by the Bureau of Reclamation, and the 1952 edition entitled "Repayment Histories and Payout Schedules." This volume brings these data up to date as of June 30, 1957.

MELTING SNOW AND RAINFALL PROPERLY CONTROLLED

BY DAMS AND CANALS PRODUCE WEALTH

THROUGH INDUSTRIAL POWER, CROPS, LIVESTOCK, AND TRADE

TO REPAY CONSTRUCTION COSTS

SUMMARY

The criterion for authorization of Federal Reclamation projects since their inception has been whether they are feasible. At the inauguration of the Federal Reclamation program, Congress authorized the Secretary of the Interior to proceed with the construction of an irrigation project if the Secretary determined that the project was practicable and that the estimated cost of construction could be returned to the United States by the water users in not exceeding 10 annual installments. Amendments and supplements to the Reclamation law subsequent to the original Reclamation Act of 1902 lengthened the period during which reimbursable project costs might be repaid.

The repayment contracts which schedule annual payments on construction charges are written and executed in accord with the laws that govern the particular project or unit. Many different repayment plans are found in the repayment contracts because the repayment requirements of the general Reclamation law have varied over the years and frequently individual project authorizing and other acts included repayment provisions tailored to the circumstances on the individual project.

Reclamation repayment laws

Act of June 17, 1902: The Reclamation Act of June 17, 1902 (32 Stat. 388), authorized the issuance of water-right applications by which individual water users contracted to repay their portion of the construction cost of a project in a period of 10 years.

Act of February 21, 1911: The Warren Act, (36 Stat. 925), provided for the disposition of surplus water to individuals or irrigation enterprises outside Government Reclamation projects, on terms determined to be just and equitable. The terms of payment now usually run from 10 to 40 years.

Act of August 13, 1914: The 20-year repayment plan, authorized by the Reclamation Extension Act of August 13, 1914 (38 Stat. 686), was de-

signed to permit a longer term for payment than the Reclamation Act of 1902.

Act of May 15, 1922: By the act of May 15, 1922 (42 Stat. 541), the Secretary of the Interior was authorized to contract with legally organized irrigation districts, and to dispense with water-right applications on the part of landowners and entrymen.

Act of December 5, 1924: The Fact Finders Act of December 5, 1924 (43 Stat. 672), provided for a plan of payment based on 5 percent of the average gross crop value in a district for a 10-year period. These payments, as a general rule, will run for long terms of years. Authority for additional contracts of this type was repealed in 1926.

Act of May 25, 1926: The Omnibus Adjustment Act of May 25, 1926 (44 Stat. 636), authorized a 40-year repayment period in place of the crop repayment plan. Some old contracts were renegotiated under this act and many new contracts were entered into on the 40-year basis provided by this law.

Act of August 4, 1939: The Reclamation Project Act of 1939 (53 Stat. 1187), provides for flexibility in determining the annual rate of repayment for new contracts, again on a crop-income basis, but total repayment must be made in 40 years for distribution systems. A development period not to exceed 10 years may be established, from the time water is delivered to a block of land, before payment of construction charges commences. Water service contracts are authorized for storage and carriage works. It also authorizes the negotiation of amendatory contracts for old projects, under the same rules, or for submission of the most practical amendatory plan to Congress for its approval.

The Reclamation Project Act of 1939 authorizes the United States to allocate portions of the total cost of a project to be repaid from power revenues or from municipal water revenues, and to flood control and navigation on a nonreimbursable basis. This made feasible for construction many projects

where the water users could not reasonably be expected to repay the entire costs.

Act of August 14, 1946: This amendment (60 Stat. 1080) to the Fish, Wildlife and Game Act of 1934 provides for nonreimbursable allocations to the preservation and propagation of fish and wildlife for new projects.

Act of October 7, 1949: A number of contracts have been entered into pursuant to the Rehabilitation and Betterment Act (63 Stat. 274). This act provides that repayment of rehabilitation and betterment expenditures on Federal Reclamation projects is to be in installments fixed in accordance with the ability of the water users to pay, and, to the fullest practicable extent, is to be scheduled for return concurrently with the water users' existing construction repayment obligations. Determinations of the Secretary of the Interior with regard to the rate and schedule for repayment of such expenditures are not effective until either 60 days after they have been submitted to House and Senate Committees on Interior and Insular Affairs, or earlier if each such committee approves.

Act of July 4, 1955: Public Law 130—84th Congress (69 Stat. 244) as amended May 14, 1956 (70 Stat. 155) authorized loans for the construction of distribution systems on authorized Federal Reclamation projects by irrigation districts and other local water user organizations. The terms of repayment of the loans are similar to the standard repayment provisions of Reclamation law except that a contribution of up to 10 percent of the cost of construction is required of the local organization.

Act of June 13, 1956: Public Law 575—84th Congress (70 Stat. 274) provides essentially that drainage and minor completion work on projects being constructed pursuant to the Federal Reclamation laws may be performed by the repayment organization concerned using federally appropriated funds. In the event construction work to be accomplished by any one repayment organization, pursuant to contract with the United States, exceeds a total cost of \$200,000, the act requires that such contract shall not be executed on behalf of the United States prior to the expiration of 60 calendar days following submittal of the contract to the Congress for reference to the appropriate congressional committees. The 60-day waiting period may be shortened if the appropriate con-

gressional committees approve the contract sooner

Act of July 2, 1956: Public Law 643—84th Congress (70 Stat. 483) provides for the inclusion in any long-term water service contract pursuant to section 9 (e) of the Reclamation Project Act of 1939 a provision for renewal if the contracting organization so requests. It also provides for the crediting of water user payments in excess of annual operation and maintenance costs against the organization's appropriate share of the water supply works construction costs until such time as the total credits equal the organization's share of the construction costs. Thereafter no construction component would be included in the water service charges. Public Law 643 also provides that a long-term section 9 (e) contract can be converted to a section 9 (d) construction repayment contract at such time as the amount of the construction costs remaining to be amortized can be repaid within the term (usually 40 years) of a contract under section 9 (d). The act provides that any party to any contract entered into pursuant either to section 9 (e) or section 9 (d) will have a first right to a stated share of the project's available water supply during the term of the contract or any renewal thereof.

The act of July 2, 1956, clears up many points with regard to the administration of sections 9 (d) and 9 (e) of the Reclamation Project Act of 1939. In so doing, several major objections that had been directed against the section 9 (e) water service type of contract were alleviated. These objections are: (1) That no assurance can be given in the contract itself that the contract will be renewed upon its expiration; (2) that the water users who have this type of contract are not assured that they will be relieved of payment of construction charges after the Government has recovered its entire irrigation investment; and (3) that the water users are not assured of a "permanent right" to the use of water under this type of contract.

Act of August 6, 1956: The Small Reclamation Projects Act of 1956 (70 Stat. 1044) as amended, authorizes loans and grants to irrigation districts, conservancy districts, other public agencies, and States for the construction of projects similar to those of the regular Reclamation program.

While such projects must have irrigation as a principal purpose, they may also provide for power production, flood control, recreational benefits,

fish and wildlife improvement, and municipal and industrial water supplies.

The act authorizes the Bureau of Reclamation to grant or lend up to \$5,000,000 to local sponsors to aid in the construction of any approved project. Grants or loans will be limited to projects that will not have an overall cost of more than \$10,000,000, inclusive of any local contribution.

The law requires that the organization seeking Federal aid itself finance a portion of the construction costs. For new projects this portion must cover the costs of acquiring lands for rights-of-way and other purposes, and of obtaining water rights up to a limit of 25 percent of the reimbursable costs. Reimbursable costs are those that the irrigation, municipal, and industrial water users or power producers are obligated to repay. Costs allocated to flood control or fish and wildlife benefits are nonreimbursable and the local organization may obtain an outright grant for such amounts. The project must be found financially feasible and assurance must be given by the State that the water rights for the project are as claimed. Construction of the project will be the responsibility of the local organization.

Loans under this act are to be repaid in a period not to exceed 50 years, exclusive of a development period of not to exceed 10 years, with no interest on those portions of the reimbursable cost properly charged to the irrigation of lands not in excess of 160 acres in a single ownership.

The portions of the reimbursable cost properly chargeable to other purposes—including the irrigation of lands in excess of 160 acres in a single ownership, commercial power, or municipal, domestic and industrial water—must pay interest. This rate of interest is based upon the rate paid on certain long-term obligations of the United States and is determined each year by the Secretary of the Treasury and applies to all contracts signed during that year.

Special project acts: In addition, a number of special acts control the terms of repayment of individual projects. Notable among these are the Columbia Basin Project Act of March 10, 1943 (57 Stat. 14); the Boulder Canyon Project Act of December 21, 1928 (45 Stat. 1057), as amended by the Adjustment Act of July 19, 1940 (54 Stat. 774); and the act authorizing the Colorado River Storage project and participating projects (70 Stat. 105, April 11, 1956).

Repayment of project costs

The Reclamation Project Act of 1939 (53 Stat. 1187), was designed to meet the difficulties encountered by farmers in paying their construction charges during a depression period under the fixed schedules established by the 1926 act. The 1939 act in section 4 provides for a variation in construction charges again in accordance with crop values, under a formula similar to that of the 1924 act, but limiting the period of repayment to 40 years. Section 7 of the act further authorizes the Secretary to negotiate for repayment contracts in excess of 40 years, but such repayment contracts are limited to existing projects or projects under construction and must be ratified by Congress.

The 1939 act modified the rules of feasibility. It brought into Reclamation law the concept that benefits from Reclamation projects were more than local in scope, and benefits that were national in character should not be a burden on the beneficiaries of Reclamation projects. In other words, certain values assigned to national benefits could be deducted from the cost of a project for repayment purposes. Section 9 (b) of the 1939 act provides that allocations of cost to flood control and navigation would be nonreimbursable.

An important feature of the 1939 act (as amended by the act of July 2, 1956) for repayment of the cost of irrigation works is found in section 9 (e), which permits an extended period for return of irrigation costs by sale of water without a fixed repayment period. Section 9 (e) contracts are applicable only to works connected with water supply and do not apply to distribution systems. The Secretary can renew such contracts and can convert them to a 9 (d) type contract. All contracts for irrigation distribution systems executed in accordance with the 1939 act are limited to 40 years under provisions of section 9 (d) of the act. In like manner, contracts for the sale of power and municipal water are limited to forty years with the privilege of the Secretary to renew these contracts from time to time.

Reclamation law was further modified in 1946 by passage of the act of August 14, wherein provision was made by Congress that costs properly allocable to fish and wildlife benefits need not be repaid by the project beneficiaries.

During the period 1933 to 1940 Congress appropriated large sums for undertaking public works throughout the United States. These sums were

appropriated to the Federal Emergency Relief Administration, Public Works Administration, and the Works Progress Administration. The acts of Congress appropriating these funds in general provided that the works were to be constructed in accordance with existing law controlling their authorization, and under the direction of the agency responsible for the administration of the existing laws. Reclamation projects were among the public works initiated under the authority vested in the President for the expenditure of relief funds. Such initial authorizations were later ratified by findings of feasibility under Reclamation law, or by a specific authorization by Congress. In general, these relief acts in no way modified the feasibility requirements of Reclamation law. If anything, they established a further criterion that the particular project should, besides satisfying Reclamation law, provide a basis for work relief. In return the project would be entitled to financing on the basis of a grant or loan from a relief appropriation. Reclamation projects initiated under the relief acts were later completed by regular Reclamation appropriations made on a fully reimbursable basis.

In addition to authorization of Reclamation projects under general laws, many Reclamation projects have been authorized by special acts of Congress. These acts of Congress are too numerous to quote in detail here, but generally they anchor to the requirement of basic Reclamation law requiring the cost to be returned by the beneficiaries. The special features of most of these acts have been directed to provisions for repayment that differ somewhat from the standard requirements of Reclamation law. These differences usually are in the form of an extension of the repayment period for that portion of the project to be repaid by irrigation water users.

The Flood Control Act of 1944 stated the policy of Congress "to recognize the interests and rights of the States in determining the development of watersheds within their borders and likewise their interest and rights in water conservation and control." In conformity with this policy it provided a procedure whereby both the Chief of Engineers, War Department, and the Secretary of the Interior are required to give to the affected State or States, and to each other, information developed by the investigations and opportunity for consultation regarding plans and proposals. In the event that the affected States or the Secretary of War make objections to a proposal, the project

shall not be deemed authorized in accordance with the Reclamation Project Act of 1939, as described above, but shall require an act of Congress. The Flood Control Act of 1944 also provided for construction by the Secretary of the Interior of additional irrigation works in connection with dams and reservoirs operated by the Secretary of War.

Water conservation and utility projects

Another outgrowth of the depression years was the effort of Congress to provide relief through Reclamation for distressed conditions in the Western Plains and Mountain States affected by the extreme droughts of the mid-1930's. Congress' efforts here were directed to providing for small irrigation projects, usually with only a few thousand acres or less, as contrasted with large developments authorized under the Reclamation Act. The Interior Department Appropriation Act for 1940 (53 Stat. 719) contained \$5,000,000 for water conservation and utilization projects in the Great Plains. The projects were subject to such repayment provisions as the President determined. In 1939 Congress passed the Water Conservation and Utility Project Act of August 11, 1939 (53 Stat. 1418), known as the Wheeler-Case Act.

A number of repayment contracts have been negotiated by the Bureau of Reclamation with water users' organizations for these projects. A development period of not to exceed 10 years is permissible and repayment of reimbursable costs is to be contracted in 40 annual installments. The July 16, 1943, amendment of the Wheeler-Case Act (57 Stat. 566) authorized the Secretary of the Interior, upon agreement with the Secretary of Agriculture, to designate as a project under the W. C. U. Act any project authorized for construction from appropriations under the water conservation and utility provision in the Interior Department Appropriation Act of 1940.

This 1939 act, as amended, authorized the construction of small projects on the basis of joint findings of feasibility by the Secretary of Agriculture and the Secretary of the Interior and approved by the President. The act provided originally for reimbursable appropriations combined with non-reimbursable participation by the Works Progress Administration and the Civilian Conservation Corps, thereby making projects with a high total cost per acre feasible, provided sufficient relief labor could be made available to hold the reimbursable portion to a reasonable amount. This act ordinarily would have expired with termination of

the WPA and CCC at the beginning of World War II. Congress, by the act of July 16, 1943, modified the original law to permit the completion of water conservation and utility projects which were justifiable as an aid in winning the war.

Status of construction program

The financial status of repayments on Federal Reclamation projects, as reflected in the records of the Bureau of Reclamation, is outlined in "Reclamation Repayments and Payment Schedules," historically and by description of existing contractual arrangements. The record affords a means of analysis of development, success, and difficulties for each project or major division of a project.

The following schedules at the end of this summary provide the project details on cost and repayment:

SCHEDULE I.—Repayment of Reclamation project construction costs.

SCHEDULE II.—Tentative allocations of estimated total construction costs.

SCHEDULE III.—Irrigation allocation repayment.

SCHEDULE IV.—Power allocation repayment.

SCHEDULE V.—Repayment from sources other than contracts and power revenues.

As shown in table A, "Summary of Construction Status and Reimbursability," on page xvii, the total estimated cost of the 102 projects covered by this study is \$7,853,820,000, of which \$2,962,171,000 had been spent on June 30, 1957. There are 62 projects costing \$511,250,000 which are completed insofar as present plans are approved. The construction program of the Bureau includes the other 40 projects consisting of the Missouri River Basin project, estimated to cost the Bureau of Reclamation \$3,403,867,000, Colorado River storage and 11 participating projects estimated to cost \$992,174,000, and 38 other projects, estimated to cost \$2,922,703,000. Completed projects for which rehabilitation and betterment work is scheduled are excluded from the latter group. Cost estimates for incomplete work are subject to constant revision due to changes in plans as construction begins on new sections of projects, price changes, closer approximations in estimating completion as work progresses, etc. As of June 30, 1957, the Bureau's construction program for the 38 regular projects under construction was 69.5 percent complete. The total value of completed projects, plus completed portions of other projects, equals \$2,658,001,000. In addition, \$304,170,000

COST OF PLANT, PROPERTY AND EQUIPMENT CUMULATIVE TO F. Y. 1952 THRU F. Y. 1957

Commercial power.....	2, 228, 693, 040	28. 38
Municipal, industrial, and domestic water.....	167, 717, 678	2. 14
Flood control.....	25, 728, 572	. 33
Investigations.....	43, 242, 803	. 55
Preconstruction contributions, Columbia Basin....	313, 440	. 00
Recreation.....	2, 588, 300	. 03
Fish and wildlife conservation.....	2, 768, 000	. 04
Mexican Treaty service....	10, 524, 000	. 13
Not allocated.....	102, 838, 554	1. 31

	\$527, 206, 594	Percent 6. 71
Nonreimbursable, subtotal...		
Navigation and flood control.....	370, 197, 173	4. 71
Irrigation.....	70, 826, 632	. 90
Fish and wildlife conservation.....	66, 412, 134	. 85
Recreation.....	8, 179, 778	. 11
Boulder City.....	3, 250, 322	. 04
Power.....	5, 204, 100	. 07
Municipal water (military).....	1, 000, 000	. 01
Highway construction.....	936, 455	. 01
Mexican Treaty service.....	1, 000, 000	. 01
Columbia Basin spillway.....	200, 000	. 00

(3) By acts of Congress applying to irrigation allocations of individual projects also shown in table C.....	\$45, 290, 200
Total.....	527, 206, 594

As shown on schedule I, "Repayment of Reclamation Project Construction Costs," the total estimated construction cost is \$7,853,820,095, of which \$527,206,594 or 6.71 percent is nonreimbursable and 93.29 percent is reimbursable.

Nonreimbursable costs

Nonreimbursability is determined in three principal ways:

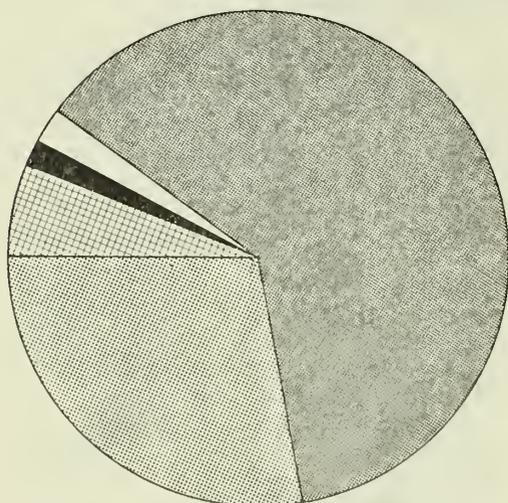

- (1) By function, according to basic statutory authority shown by table B..... \$456, 379, 962
- (2) By adjustments authorized by Congress in 1926 and similar subsequent acts, charging off specific costs for specific reasons shown in table C..... 25, 536, 432

For Missouri River Basin project, nonreimbursable costs of \$186,634,800 covering navigation and flood control allocations of Bureau of Reclamation features were authorized under the Flood Control Act of December 22, 1944. Combined with amounts for other projects shown in table B on page xviii, total nonreimbursable cost authorized by basic legislation to June 30, 1957, amounts to \$456,379,962. Costs which are nonreimbursable by congressional adjustment and those which are nonreimbursable by acts applying to project allocations to irrigation, such as the Water Conservation and Utilization acts, are shown in table C on page xix. Also included are costs authorized by Congress to be in excess of the repayment obligation of the water users.

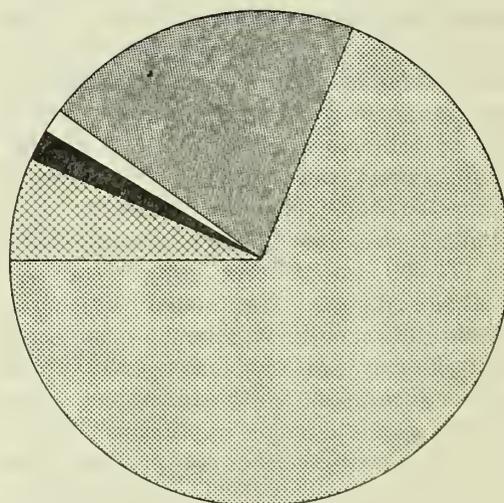

Contractual obligation of water users

The reimbursable irrigation allocation shown in schedule II, "Tentative Allocations of Estimated Total Construction Costs," is the basis for determining the repayment obligation of the water users. As shown in schedule III, "Irrigation Allo-

IN THOUSANDS OF \$**

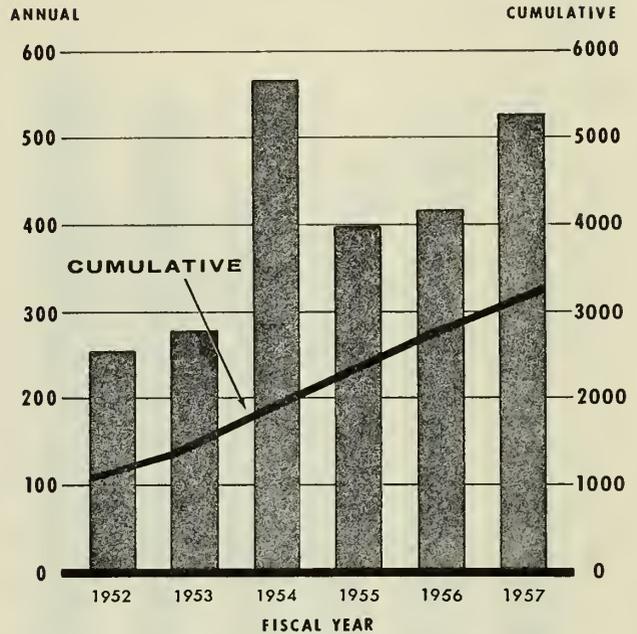

CHART D

cation Repayment," the \$824,451,095 in existing repayment contracts includes \$18,093,224 in funded operation and maintenance charges and funded interest and penalties, which the water users are obligated to repay. Also included in the water users' contracts are \$97,110,431 in obligations of municipal and other water users, who in some cases combined with the irrigation water users as contractors. Certain contracts with irrigation water users include the cost of power facilities, and power revenues are applied against the total obligation. Giving effect to power revenues, water service contracts, and other items identified as "Sources Other than Repayment Contracts" and, after allowing for minor adjustments required to bring the repayment obligations in line with construction costs, there remains \$506,415,850 in irrigation water users' contracts to be negotiated. Of this amount \$380,595,376 is for Missouri River Basin project.

Current status of repayment contracts

Of the \$824,451,095 total contracted obligation

of the water users for repayment, \$129,985,506 had become due on June 30, 1957, of which \$129,826,748 was collected (chart C). Details of these contracts are shown in schedule III. Uncollected items against these maturities were \$158,758 or 0.12 percent, to be paid after June 30, 1957. These payments are made into the Reclamation fund (table E), and become available for reappropriation by the Congress to construct future projects. Chart D depicts municipal and industrial water revenues in years 1952 through 1957.

Irrigable acreage and crop values for calendar years 1952 through 1957 are illustrated in charts E and F, respectively.

Application of power revenues to repayment

The total power investment, present and contemplated, to be repaid from power revenues for the 25 projects discussed in this volume which have power systems, is \$2,228,693,040, as shown on schedule IV, "Power Allocation Repayment." In addition to repaying the commercial power

IRRIGABLE ACREAGE
CUMULATIVE TO C. Y. 1952 THRU C. Y. 1957
 IN MILLIONS OF ACRES

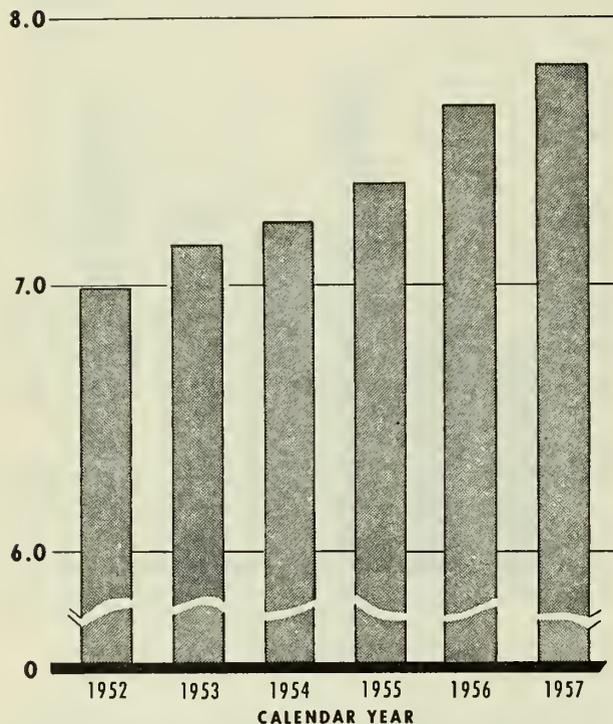

CHART E

allocation, power revenues will also be applied against the following:

(1) Irrigation allocation.....	\$3, 119, 498, 561
(2) Flood control allocation for Hoover Dam.....	25, 000, 000
(3) Servicing Mexican Treaty on Parker-Davis.....	10, 524, 000
(4) Allocations to investigations, recreation, and fish and wildlife on Missouri River Basin.....	40, 607, 100

Thus power revenues will be used to repay about \$5.4 billion out of the total reimbursable amount of \$7.3 billion or 74 percent. Power rates are established to pay the operation and maintenance expenses and interest charges as well as these construction costs. Total revenues to date are over \$582 million.

Most power revenues are also paid into the Reclamation fund (table E) and became available

CROP VALUES
ANNUAL C. Y. 1952-C. Y. 1957
CUMULATIVE TO C. Y. 1952 THRU C. Y. 1957

CHART F

for appropriation by Congress to construct future projects and to operate those which are in service. Revenues from Hoover powerplant are paid into the Colorado River Dam fund (table F), from which appropriations for operation and maintenance are made annually. These revenues are also used to repay, with interest, the advances made to the fund for construction of the project, to make payments in lieu of taxes to Arizona and Nevada, and to finance the Colorado River Development fund. Revenues from the Colorado River Storage project powerplants will similarly finance the Upper Colorado River Basin fund. The Fort Peck continuing fund (table G) is a revolving fund for financing the costs of operating that project, including the Corps of Engineers, and for repaying the construction costs.

Charts G and H show installed capacities and power revenues, respectively, for fiscal years 1952 through 1957.

Williston, N. Dak.	409,095					409,095			
Yakima, Wash.	61,781,410	54,896,417	5,650,844			4,215		1,229,934	
Yuma, Ariz.-Calif.	7,480,803	6,639,709	457,356			383,738			
Yuma Auxiliary, Ariz.	1,143,045	120,663				1,022,382			

¹ Other reimbursable costs:

- Flood control.
- Costs not allocated.
- Fish and wildlife conservation.
- Frypan-Arkansas project costs, not allocated.
- Recreation.
- Servicing Mexican Treaty.

² Other nonreimbursable costs:

- Boulder City costs not directly associated with construction or operation of project.

³ Forest Service road construction.

- Power.
- Spillway lighting.
- Highway construction.
- Municipal water (military).
- Mexican Treaty, \$1,000,000 and power litigation costs.

⁴ Constructed by International Boundary and Water Commission.⁵ Excludes costs of U. S. Corps of Engineers features.⁶ Included in Colorado River storage project.⁷ Advanced by Metropolitan Water District.

¹ \$618,669—Imperial Irrigation District credits, Act of June 13, 1949 (63 Stat. 172).
² Includes loss on disposal of material and equipment (—\$22,301).
³ Includes expenses of hospital operations (—\$348) and other costs (—\$5,111).
⁴ Includes initial expenditures of appropriated funds allocated to municipal water.
⁵ Includes loss from expenditures for guide service and town operations—Coulter Dam (—\$502,254).
⁶ Includes expenses on temporary water service contracts (—\$36,753).

GLOSSARY

Accretions.—Funds collected by agencies other than the Bureau of Reclamation, which are authorized by law to be deposited in the Reclamation fund.

Allocation of costs.—The proportionate distribution of the cost of facilities of a project to the various purposes served, such as irrigation, power, municipal water supply, and miscellaneous purposes as directed in section 9 of the Reclamation Project Act of 1939.

Approved for construction.—Authorized projects for which congressional action has provided construction funds.

Authorized projects.—Projects may be authorized in two ways: by the Secretary of the Interior acting in conformance with the Federal Reclamation laws (act of June 17, 1902, 32 Stat. 388, and acts amendatory thereof or supplementary thereto); or by special legislation of the Congress on project proposals which do not fully conform to existing requirements of the Reclamation laws. Prior to the passage of the act of August 4, 1939 (53 Stat. 1187), a number of projects were authorized by the President. This act returned project authorization to the Secretary of the Interior.

Chargeoffs authorized by the Congress.—Revaluations of reimbursable costs for which projects have been relieved of repayment requirements by congressional authorization.

Collections.—Collections are receipts derived from construction repayments, operation and maintenance repayments, power revenues, water rentals and miscellaneous items.

Colorado River Dam fund.—A special fund established by the Congress under the Boulder Canyon Project Act of December 21, 1948 (45 Stat. 1057) (as amended and modified by the Boulder Canyon Project Adjustment Act of July 19, 1940) (54 Stat. 774), to receive collections from and to finance construction and pertinent operation of Hoover Dam and powerplant and the All-American Canal System.

Construction costs.—All costs, including labor, construction equipment, materials, supplies, installed equipment, land and rights, investigations, engineering and related services which contribute to the original value of the physical works constructed.

Contributions.—Cash or other assets contributed or donated to the project for the purpose of financing wholly or in part extensions of facilities.

Cost of plant, property and equipment.—The term "cost" includes materials, supplies, labor, services, and other items consumed or employed in the construction and installation, the cost of preliminary studies, plans, surveys, engineering, supervision, and general expenses, which contribute directly to the plant.

Cost, total estimated.—Calculations covering all foreseeable costs of a feature, structure or activity, regardless of the source of the funds used for financing.

Distribution system (irrigation).—Usually, a system of small canals and laterals, which, starting from the main canal, conveys water directly to the farm turnouts.

Features (of a project).—The major components, such as dams, canals, powerplants, pumping plants, drains and laterals.

Finding of feasibility.—A document approved by the Secretary of the Interior and sent to the President and the Congress, in which the Secretary states that the proposed project has engineering feasibility and that the estimated cost, less allocations to flood control, navigation and fish and wildlife, will probably be returned to the United States.

Funded charges.—(See "*Operation and maintenance charges funded*" and "*Interest and penalties funded.*")

Interest and penalties funded.—Interest and penalties on delinquent charges due from water users which have been included in the construction repayment contracts.

Investment.—The total of all expended Federal appropriations and appropriations available for expenditure as adjusted by transfers of costs and property between Bureau projects and other governmental agencies. The “net” investment of the United States Government is determined by deducting from the total investment the charge-off authorized by the Congress, funds returned to the United States Treasury and nonreimbursable expenditures. The term “investment” is also occasionally used to refer to the construction cost of project facilities even though non-Federal expenditures (contributions) may be included.

Matured charges.—The portion of a repayment contract represented by the installments due, whether paid or not.

Operation and maintenance charges funded.—Operation and maintenance charges due from water users which have been included in the construction repayment contracts.

Power revenue.—The amounts of money received from sales of electric energy, electric property rentals and any other income incidental thereto, including interproject sales.

Project.—Any reclamation or irrigation project, including incidental features thereof, authorized by the Federal Reclamation laws, or constructed by the United States pursuant to said laws, or in connection with which there is a repayment contract executed by the United States, pursuant to said laws, or any project constructed or operated and maintained by the Secretary through the Bureau of Reclamation for the reclamation of the arid lands or other purposes. (Reclamation Project Act of 1939, 53 Stat. 1187.) A project may consist of one major structure or of an entire river basin development. Major subdivisions of a project, consisting of a part that is designed, constructed, and operated as an integral development, more or less self-contained, may be known as *divisions*, and a subdivision of a division may be known as a *unit*.

Reclamation fund.—A special fund established by the Congress under the Reclamation Act of June 17, 1902 (32 Stat. 388), as amended, for the receipts from the sale of public land, proceeds from Oil Leasing Act and certain other revenues. (See “accretions” and “collections.”) The Congress makes appropriations from this fund for the in-

vestigation, construction, operation and administration of Reclamation projects. Collections from water users for reimbursable costs are returned to the fund.

Rehabilitation and betterment.—A program authorized by the act of October 7, 1949, providing for the maintenance, including replacements, of irrigation systems on projects governed by Federal Reclamation laws, which cannot be financed currently but which the organizations concerned obligate themselves to return in installments. Construction projects which may include the rehabilitation of features on previously non-Federal projects are not included in the “rehabilitation and betterment” program which is restricted to Federal projects.

Reimbursable.—The portion of the allocation of construction or other costs which is not authorized by the Congress to be nonreimbursable.

Repayment contract.—A contract between a water users’ organization and the United States by which the organization obligates itself to repay its share of the reimbursable construction and other costs of a Reclamation project in installments determined in accordance with Reclamation law.

Revenue, miscellaneous.—All revenues received from the operation of Reclamation projects not otherwise classified as repayments, power revenues, or water rentals.

Revenue (power).—See *Power revenue*.

Upper Colorado River Basin fund.—A special fund established by Congress in the Colorado River Storage project authorization, act of April 11, 1956 (70 Stat. 105), to receive operating revenues from the projects and to finance construction and operation of all facilities.

Water rentals.—Revenue received by projects from water users, usually during the construction or development period, which is applied against the reimbursable irrigation (or municipal water) allocation in determining the repayment obligation.

Water service contracts.—A type of contract authorized by the Reclamation Project Act of August 4, 1939 (53 Stat. 1187), whereby water is furnished for irrigation (sec. 9-e) or municipal or miscellaneous purposes (sec. 9-c) at rates to produce revenues sufficient to cover the applicable reimbursable charges.

PROJECT STATEMENTS

ARNOLD PROJECT

BEND, OREG.

Arnold project in Deschutes County, Oregon, serves the Arnold Irrigation District, which was organized as the Arnold Irrigation Co. in 1905. A diversion dam located immediately above the canal intake diverts part of the Deschutes River flow into a short intake channel leading into the distribution system. The district supplements its river flow water with storage water from Crane Prairie Reservoir through inter-district agreements with the Central Oregon Irrigation District.

As most of the structures in the distribution system were constructed of wood, considerable replacement became necessary in later years, and in 1948 the largest flume on the main canal, just below the intake, was in imminent danger of complete failure and possible serious loss of irrigated crops throughout the entire district. Funds to initiate emergency rehabilitation of the works were provided July 25, 1947, in the Interior Department Appropriation Act of 1948 (61 Stat. 460). The Bureau of Reclamation replaced the old wood flume with a semicircular steel flume and installed a new concrete headworks. This work was completed in 1949.

The total construction cost at June 30, 1957, was \$197,926, all of which is allocated to irrigation and is reimbursable. Additional rehabilitation work of replacing deteriorated wooden flumes at a cost of \$70,000, has not been included.

Repayment contracts.—A repayment contract between the Arnold Irrigation District and the United States, dated September 3, 1948, provides for repayment to the United States of all costs up to a maximum of \$210,000.

An amendatory contract dated June 22, 1953, was entered into primarily to modify the repayment terms of the September 3, 1948, contract by extending the payout period from 35 to 40 years. The purpose of the contract was to increase the amount of current district revenues which would be available to the district for doing further rehabilitation and betterment work.

The Arnold irrigation district operates the project works.

Payout schedule.—Based on the announced actual cost of \$197,926, payout under the current contract is scheduled for completion in 1991 with an annual base installment of \$4,902 commencing in 1952.

PUBLIC NOTICES AND CONTRACTS

- 1948, September 3: Contract Ilr-1519 with Arnold irrigation district to rehabilitate distribution system, cost not to exceed \$210,000.
- 1950, December 21: Notice from acting regional director announcing the total estimated cost at \$207,150, to be repaid in 35 equal installments, subject to application of normal and percentage repayment plan.
- 1953, June 22: Contract 14-06-100-132 extending the repayment period to 40 years.
- 1953, August 24: Notice from Assistant Secretary of the Interior announcing the actual project cost at \$197,926, to be repaid in 40 annual installments, subject to application of normal and percentage repayment plan.

² Excludes uncollected accrual of \$637 for 1958.

AVONDALE PROJECT

COEUR D'ALENE, IDAHO

Rehabilitation of irrigation facilities on the Avondale project was authorized by the terms of the Interior Department Appropriation Act of 1954 (July 31, 1953, 67 Stat. 266). The project is located in Kootenai County in northern Idaho. The purpose of the project works is to provide irrigation water to about 900 acres in which part-time farms and suburban residence units predominate.

The principal features consist of 2 centrifugal pumps capable of delivering 3,000 gallons per minute, an elevated steel equalizing reservoir with a 50,000-gallon capacity, and 470 feet of steel pipeline to deliver irrigation water under pressure to the project's distribution system for sprinkler irrigation.

Total construction cost of these facilities is \$244,424, all of which is allocated to irrigation and is reimbursable.

The Avondale irrigation district operates the project works.

Repayment contracts.—The repayment contract with the district, dated July 14, 1954, provides for repayment to the United States of the actual cost of the project works in an amount not to exceed \$224,000. This amount includes \$2,000 for actual costs of past surveys and investigations, and is established as a part of the district's construction charge obligation. A supplemental contract was also signed with the district on July 14, 1954, to repay an additional sum not to exceed \$53,000. This contract provides for the inclusion

of an elevated steel equalizing tank with automatic pump control facilities and additional steel pipe distribution lines to the project works. The cost of these facilities is to be consolidated with the district's construction obligation and to be repaid by continuing the same annual installments over an extended period.

PUBLIC NOTICES AND CONTRACTS

1954, July 14: Contract 14-06-100-517 and 518 with Avondale irrigation district to repay \$224,000, the estimated cost of project rehabilitation in 40 equal annual installments or, at the district's option, in 80 equal semiannual installments.

1954, July 14: Contract for construction of additional irrigation facilities, to repay \$53,000 in extended annual installments. The extended payments shall be in the same amounts, and due and payable upon the same basis as established in the contract dated July 14, 1954.

1957, June 13: Notice from acting regional director announcing the actual cost at \$244,424, to be repaid in 44 annual installments.

The summary of status of repayment contracts:

Total value of contracted repayment	\$244,424
Total matured charges	0
Total matured charges repaid	0
Total matured charges unpaid	0

Payout schedule.—A 2-year development period has been fixed, starting January 1, 1956. The first annual construction installment is to be made on or before December 31, 1958, with repayment completed in 40 years.

BAKER PROJECT

BAKER, OREG.

Baker project was found feasible by the Secretary of the Interior on March 17, 1931, and construction of Thief Valley Dam was authorized by the President on March 18, 1931, in pursuance of section 4 of the act of June 25, 1910 (36 Stat. 836) and subsection B of section 4 of the act of December 5, 1924 (43 Stat. 702). The dam is located 17 miles northeast of Baker in Union County, Oreg.

The original project, developed by early settlers, consisted of diversion works and a canal system to serve approximately 7,300 acres in Baker County in the lower Powder River Valley. Mid-summer river flows proved too erratic for sustained crop production. To supplement the water supply, construction of Thief Valley Dam was begun September 12, 1931, with first storage available June 1, 1932.

Total cost of \$281,589 is reimbursable and allocated to irrigation. A contribution for construction amounted to \$5,000. Payment of general investigations costs of \$51,574 has been deferred pending development of the proposed Greater Baker project.

The Lower Powder River irrigation district has operated the project since June 1, 1932. There are no power facilities or reserved works.

Repayment contracts.—The Lower Powder River

irrigation district contracted with the Bureau of Reclamation to build Thief Valley Dam and Reservoir. After excavation was started, it became apparent that more excavating would be required than originally estimated. The year following, a supplemental contract was negotiated increasing the limitations on expenditures from \$200,000 to \$240,000 to provide for additional excavating and concrete work. Otherwise provisions of the original contract remained unchanged.

Payout schedule.—Payout is scheduled for completion in 1976 by 39 equal installments of \$5,770, commencing in 1937 with the first half-year payment.

CONTRACTS

1931, May 18: Contract Ilr-649 with Lower Powder River irrigation district for construction of Thief Valley Dam with total obligation not to exceed \$200,000 repayable in 39 years.

1932, February 29: Supplemental repayment contract to increase the limit of expenditure from \$200,000 to \$240,000.

The summary of status of repayment contracts:

Total value of contracted repayment.....	\$225,015
Total matured charges.....	118,276
Total matured charges repaid.....	118,276
Total matured charges unpaid.....	0

BALMORHEA PROJECT

BALMORHEA, TEX.

Repairs and reconstruction work on the Balmorhea project in Reeves County in west Texas were completed in 1947 by the United States. The work was approved by the President on April 15, 1944, under authority of the Water Conservation and Utilization Act of August 11, 1939 (53 Stat. 1418), as amended.

The project was developed to supply supplemental water to 10,608 acres of land. The project features include purchase of the Phantom Lake Spring, construction of the Phantom Lake Canal to convey water from the spring to the project, construction of the inlet feeder canal to carry normal low flows in excess of immediate irrigation demands from the present main canal to the Lower Parks Reservoir, some necessary repairs to existing irrigation facilities, and the necessary operation and maintenance during construction.

The total completed cost of the Balmorhea project features was \$437,298 including \$30,765 of funded operation and maintenance charges. Reimbursable costs are limited to \$255,600 by the finding of feasibility made pursuant to the July 16, 1943, amendment to the Water Conservation Utilization Act.

The Balmorhea project is operated by the Reeves County Water Improvement District No. 1.

CONTRACT

1945, August 23: Contract Ilr-1473 with Reeves County Water Improvement District No. 1 for repayment of \$255,600 in 40 annual installments.

The status of repayment on June 30, 1957, is as follows:

Total value of contracted repayment.....	\$255, 600
Total matured charges.....	24, 200
Total matured charges repaid.....	24, 200
Total matured charges unpaid.....	0

Payout schedule.—The contract between the United States and the Reeves County Water Improvement District No. 1 dated August 23, 1945, provides that \$255,600 will be paid in 40 annual installments. The payout period is 1948–87, inclusive. From 1948 through 1967 the annual payments, on a calendar year basis, vary from \$2,219 to \$2,879, averaging \$2,467, until the district repays its RFC obligations. The remainder of the payout-period payments will be \$10,719 annually, except for the final payment which will be \$2,599:

BELLE FOURCHE PROJECT

NEWELL, S. DAK.

Construction of the Belle Fourche project was authorized by the Secretary of the Interior on May 10, 1904, under provisions of the original Reclamation Act of June 17, 1902 (32 Stat. 388).

The principal purpose of the Belle Fourche project is irrigation and the project at present supplies water to 57,400 acres of land in Meade and Butte Counties, S. Dak. The water supply is diverted from the Belle Fourche River with diversion works located 1½ miles downstream from the city of Belle Fourche. From the diversion dam, the Inlet Canal carries the water approximately 6½ miles in a northeasterly direction to the Belle Fourche Reservoir on Owl Creek. Water from the reservoir is released through the Belle Fourche Dam into the North and South main canals, each about 45 miles long, which carry the water to the irrigated lands.

The reimbursable cost of the project is allocated entirely to irrigation. A recapitulation of the costs and repayment is presented in the following table:

Primary construction cost.....	\$3, 531, 575. 18	
Supplemental construction cost.....	1, 069, 344. 53	
Rehabilitation and betterment.....	399, 870. 92	
Court of Claims cost.....	37, 316. 36	
Total.....		\$5, 038, 106. 99
Operation and maintenance funded.....	570, 194. 90	
Interest and penalties funded.....	106, 382. 63	
Deductions:		
Contributed funds.....	\$5, 324. 86	
Chargeoff, act of May 25, 1926.....	652, 699. 48	

Deductions—Continued

Chargeoff, land classification Dec. 27, 1948, 13,604.7 acres.....	\$735, 606. 13
Chargeoff, land classification approved Feb. 11, 1955, 1,682.9 acres.....	90, 994. 40

Total deductions..... \$1, 484, 624. 87

Total obligation..... 4, 230, 059. 65

On January 1, 1949, the Belle Fourche irrigation district assumed the operation and maintenance of the project works.

Repayment contracts.—An amendatory contract dated November 29, 1949, was negotiated pursuant to subsection (a) of section 7 of the Reclamation Act of 1939 and was approved by Public Law 419, 81st Congress, 1st session. The obligation is to be repaid at the rate of \$38,700 per year. The district may elect to pay annual installments according to a variable formula reflecting changing economic conditions. A rehabilitation and betterment construction program, completed in 1956 in the amount of \$399,870.92, is included in the amendatory contract.

PUBLIC NOTICES AND CONTRACTS

- 1907, June 21: Public notice. Construction charge \$30 per acre. Payable 10 equal annual installments.
- 1910, February 19: Public notice. Construction charge \$30 per acre. Payable 10 equal annual installments.
- 1911, December 30: Public notice. Equal annual installments charged to graduated annual installments and for some lands construction charge raised to \$35 and \$40 per acre.
- 1912, May 2: Public notice. Construction charge \$30, \$35, and \$40 per acre. Payable in 10 graduated installments.

¹ Decrease. Decreases are due to funding of delinquent charges, deferments under relief acts and cancellations of water-right applications. 1912—Reduction of accruals, 1911 public notice. 1915—Reclamation Extension Act, Aug. 3, 1914. 1924—Funding of delinquencies, 1923 contract. 1929—Funding of delinquencies, 1927 contract.
² Increase in obligation due to assumption by district of obligation to pay construction and operation and maintenance deficits and to funding of delinquencies.
³ Increase in obligation due to assumption by district of obligation for drainage work and replacements, and to funding of delinquencies.
⁴ Moratorium period. Acts of Apr. 1, 1932, Mar. 3, 1933, Mar. 27, 1934, June 13, 1935, and Apr. 14, 1936. Construction charges deferred for calendar years 1931, \$51,907; 1932, \$50,764; 1933, \$49,202; 1934, \$49,574; 1935, \$49,062; 1936,

\$27,047. Part 1937 charge deferred under act of Aug. 21, 1937, \$38,500. Part 1938 charges deferred under act of May 31, 1939, \$40,248.
⁵ Charges deferred under act of Aug. 4, 1939: Year 1939, \$53,993; 1940, \$26,930; 1941, \$30,630; 1943, \$20,685; 1948, \$20,000; and 1949, \$30,300. \$32,407 additional credits allowed under the 1949 amendatory repayment contract.
⁶ Decrease due to beginning and completion of land reclassification as provided for in the amendatory contract dated Nov. 29, 1949.
⁷ \$400,000 rehabilitation and betterment added.
⁸ Applications of funds received from grazing rentals and purchase of high-way rights of way.
⁹ Applications of funds received from sale of public lands and purchase of high-way rights of way.
¹⁰ Includes \$5,411 paid on suspended or temporarily unproductive lands.

- 1915, May 18: Public notice. Construction charge \$40 per acre. Payable 20 graduated installments.
- 1917, January 9: Public notice. Construction charge \$45 per acre. Payable 20 graduated installments.
- 1921, August 2: Public notice. Construction charge \$45 per acre. Payable 20 graduated installments.
- 1923, July 16: Contract with Belle Fourche irrigation district. District obligated to pay construction cost of project. Construction deficit, operation and maintenance deficit, and delinquent charges merged as supplemental construction to be paid after 20-year-repayment period in installments of \$3.15 per acre.
- 1927, October 4: Contract with Belle Fourche irrigation district. Time of payment of primary construction charges extended to 40 years. Delinquent operation and maintenance and penalties and construction penalties funded. District assumed additional obligation for construction of drains, \$1,000,000, and for replacement of structures, \$150,000, to be paid as supplemental construction. Supplemental construction to be paid in 20 semi-annual installments after primary construction.
- 1931, September 1: Contract with Belle Fourche irrigation district. Remainder of primary construction to be paid in graduated annual installments of from \$50,000 to \$75,000, 1931 to 1955. Supplemental construction to be paid after primary at rate of \$75,000 per year.
- 1949, November 24: Amendatory contract Ilr-1555 with the Belle Fourche irrigation district established a repayment rate of \$38,700 per year unless the district elects to pay annual installments according to a variable formula.

Payout schedule.—Payout of the unmatured obligation of \$2,679,946 is scheduled for completion in about 70 years by the annual payment of \$38,700 annually, commencing in fiscal year 1951.

² Project assumed full responsibility for all operation and maintenance costs after 1952.

BITTER ROOT PROJECT

HAMILTON, MONT.

Rehabilitation of the irrigation system of the Bitter Root irrigation district in Missoula and Ravalli Counties, Mont., and the liquidation of its private indebtedness were authorized by the act of July 3, 1930 (46 Stat. 852).

Facilities to serve land in the Bitter Root project were originally constructed with private capital. Water is stored in Lake Como Reservoir, on Rock Creek, one of the tributaries of Bitterroot River. Diversion is accomplished by the Rock Creek diversion dam, 1 mile below Lake Como.

The cost and repayment allocations are:

Construction cost.....	\$932, 124
Rehabilitation and betterment.....	325, 000
Operation and maintenance funded.....	22, 927
	<hr/>
Total estimated project cost.....	1, 280, 051
Less chargeoff by Congress (act of January 30, 1954).....	2, 310
	<hr/>
Reimbursable cost.....	1, 277, 741
	<hr/> <hr/>
Allocation of reimbursable costs: Irrigation.....	1, 277, 741

The district has always operated and maintained the irrigation system.

Repayment contracts.—The total original cost incurred by the United States in rehabilitating the project irrigation system and liquidation of the private indebtedness of the Bitter Root irrigation district was \$747,641. In 1936, \$200,000 was added for rehabilitation, making a total obligation of \$947,641. A portion (\$5,100) of the costs of financial adjustment investigations and contract negotiation leading to the 1948 repayment contract have been added to this. By approving the 1948 amendatory repayment contract, Congress established the total obligation of the district at \$952,741. This 1948 contract also includes provision for expenditure of not more than \$100,000 or additional rehabilitation work by the United

States which would increase the total obligation to \$1,052,741. The latest contract dated December 28, 1956, provides for another rehabilitation program of \$225,000, making a total repayment ceiling of \$1,277,741. As noted above, the amendatory repayment contract ceiling of \$1,052,741 includes \$5,100 to cover the cost of writing the amendatory contract to be repaid by the district. Actual cost of writing the contract was \$7,410. The excess cost of \$2,310 not covered by the contract was charged off by Congress by Public Law 289, 83d Congress, 2d session (act of January 30, 1954).

The original repayment contract with the Bitter Root irrigation district was signed on August 24, 1931. This contract provided \$1,250,000 of Federal funds, of which not to exceed \$500,000 would be used by the United States to retire the bonded and other outstanding indebtedness of the district, and the balance remaining of \$750,000 would be used to rehabilitate the irrigation system for the district. A contract dated March 17, 1936, provided for expenditure by the United States of an additional \$200,000 to rehabilitate the system of the district. An amendatory contract dated September 16, 1948, canceled payment of interest by the district on the amount advanced initially to liquidate its indebtedness, canceled all interest on delinquencies to the date of the contract, and rescheduled annual payments by the district on the basis of water-user repayment ability. Contract also provides that a maximum of \$100,000 can be spent by the United States to rehabilitate the irrigation system. Amounts expended under this provision are to be added to the total construction obligation and repaid at the same rate as provided for the other portions of the construction obligation. The latter contract was approved by act of Congress on May 6, 1949 (Public Law 56, 81st Cong., 1st sess.).

Payout schedule.—Payout is estimated to be completed in about 49 years commencing in 1948 by payments of \$16,665, subject to annual adjustment by application of the normal and percentage plan plus parity. Payout under the 1956 contract will require 40 years beginning in 1958 at an estimated installment of \$5,625 per year.

CONTRACTS

1931, August 24: Contract with Bitter Root irrigation district. Repay indebtedness and repair system. Seven hundred and fifty thousand dollars maximum to be spent by United States. Interest at 4 percent on all advances. Only interest to be paid first 5 years, then obligation in 35 amortized installments.

1936, March 17: Contract with Bitter Root irrigation district. Two hundred thousand dollars additional provided for rehabilitation of the irrigation system. Also \$43,247.81 in delinquent interest funded with original obligation. Interest payments no longer required on funds advanced for rehabilitation. Added amount to be repaid in 40 equal annual installments.

1948, September 16: Contract with Bitter Root irrigation district. Canceled interest payments on all advanced funds, including \$43,247.81 previously funded. Cost of financial adjustment investigation, \$5,100, added to construction obligation. Installments scheduled at \$16,665 annually, varied by normal and percentage and the parity ratio for feed grains, hay, and dairy products. Installments may vary from a minimum of 15 percent to a maximum of 200 percent of the base rate.

1956, December 28: Contract with Bitter Root irrigation district for rehabilitation and betterment work not to exceed \$225,000. First installment due July 1, 1958, in the amount of \$5,625 and each year thereafter until final costs are determined. The balance due after final costs are established shall be spread equally over the remainder of a total 40-year payout period.

The summary of status of repayment contracts:

¹ Decrease due to deferment of charges under Relief Act.

² Obligation of water users reduced by amendatory contract IIR-1533, dated Sept. 16, 1948, by eliminating interest being charged on amount expended for liquidation of bonded indebtedness of district. Obligation reflects \$40,000 of the \$100,000 for current and anticipated rehabilitation and betterment work.

³ Decrease to reflect adjustment under new contract whereby delinquencies are funded.

⁴ Application of prior interest payments on liquidated bonded indebtedness to construction obligation.

⁵ Obligation increased \$60,000 to reflect full amount provided in repayment contract for rehabilitation and betterment work.

⁶ Obligation increased by \$225,000 to reflect additional rehabilitation and betterment repayment contract.

⁷ Excludes 1958 payment of \$11,399 received in fiscal year 1957.

BOISE PROJECT

IDAHO, OREG.

Construction of the Boise project was originally authorized for (a) the Arrowrock division on March 27, 1905, by the Secretary of the Interior under provisions of the Reclamation Act of June 17, 1902 (32 Stat. 388); (b) Arrowrock Dam, January 6, 1911; (c) Black Canyon Dam and powerplant, 1924; (d) Deadwood Dam and Reservoir, October 19, 1928; (e) Payette division, December 19, 1935, by the President under section 4 of the act of June 25, 1910 (36 Stat. 836); (f) Anderson Ranch Dam and Reservoir, August 12, 1940, by the Secretary of the Interior under Reclamation Project Act of 1939 (53 Stat. 1187).

The Boise project development comprises irrigation, storage, diversion and distribution works which, together with auxiliary power development, provide water for lands in southwestern Idaho and eastern Oregon. When considered from the standpoint of lands served with irrigation water, the project falls naturally into the Arrowrock and Payette divisions, as described below.

The estimated total cost of the project is \$68,703,721 including \$1,821,473, funded charges.

The cost and repayment allocations are:

------------	------------

¹ Includes unsold space in Cascade and Deadwood Dams. Allocation is dependent on future sales and authorizations.

Power generated at the three powerplants (Anderson Ranch, diversion, and Black Canyon) is used primarily to serve project pumping loads on the Boise and Owyhee projects. A substantial block of power is also furnished to the Minidoka project and is used to supplement power generated and sold on that project. Power is also furnished one REA financed cooperative. Two thousand kilowatts of peaking power together with additional secondary energy is sold to the Idaho

Power Company. The Idaho Power Co. also furnishes transmission services from the project facilities to most of the powerloads.

ARROWROCK DIVISION

Lands in the Arrowrock Division are bounded generally by the Snake and Boise Rivers and lie in the Boise Valley. About 165,000 irrigable acres are furnished a full water supply and 126,000 acres are furnished supplemental water. Project facilities of this division are Anderson Ranch Dam and Reservoir, Arrowrock Dam and Reservoir, both on the Boise River; the Boise River diversion dam which heads the main canal which flows into Lake Lowell, an offstream reservoir; and canals, laterals, and drains to serve the project. Hydroelectric installations include the Anderson Ranch and Boise River diversion powerplants and transmission facilities.

Anderson Ranch Dam and Reservoir, for purposes of irrigation allocation and repayable obligations, is carried as a separate unit from the Arrowrock division.

The repayable obligation of the water users in the Arrowrock division now totals \$13,682,811. The entire amount, with exception of congressional chargeoffs, is repayable under the terms of the repayment contracts with districts and individual water users within the division.

Operation and maintenance of the division, with exception of reserved works and power facilities was transferred to a board of control in April 1926. These reserved works and power facilities consist of Boise River Diversion Dam and powerplant; Arrowrock Dam and Reservoir; Anderson Ranch Dam and Reservoir and powerplant; and the transmission facilities.

PUBLIC NOTICES AND CONTRACTS

- 1915, June 1: Contract with Nampa-Meridian irrigation district for construction of drains and for storage in Arrowrock Reservoir.
- 1915, June 15: Contract Ilr-415 with Pioneer irrigation district for storage in Arrowrock Reservoir and for drainage work.
- 1917, July 2: Public notice. Construction charge \$80 per acre, payable in 20 graduated installments.
- 1917, August 13: Contract Ilr-412 with Farmers Union Ditch Co., Ltd., for Arrowrock Reservoir storage.
- 1917, December 3: Contract Ilr-411 with Farmers Co-operative Ditch Co. for Arrowrock Reservoir storage.

- 1918, February 9: Contract Ilr-416 with Settlers irrigation district for Arrowrock Reservoir storage.
- 1918, February 15: Contract Ilr-409 with Riverside irrigation district and Big Bend irrigation district for construction of drains and for storage in Arrowrock Reservoir.
- 1918, April 1: Public notice. Rate and terms same as 1917 public notice.
- 1919, February 18: Contract Ilr-416 with Settlers irrigation district for water right at \$70 per acre for 518.13 acres of project land.
- 1919, March 7: Public notice. Rate and terms same as 1917 public notice.
- 1924, January 2: Public notice. Construction charge \$77.44 per acre, payable in 20 graduated installments.
- 1926, March 1: Contract Ilr-16 with Riverside irrigation district, Ltd., for removal of slides.
- 1926, March 25: Contract Ilr-409 with Big Bend irrigation district; March 20, Ilr-54 with Boise-Kuna irrigation district; March 2, Ilr-414 with Nampa-Meridian irrigation district; September 27, Ilr-54 with New York irrigation district; and April 6, Ilr-417 with Wilder irrigation district, under which districts assumed obligations of individual water users. Contracts provide also for additional drainage work and for funding of delinquent operation and maintenance charges and penalties, and penalties on delinquent construction charges. Payments of construction charges by districts to be made semiannually on a crop production basis (5 percent plan—Fact Finders Act of 1924).
- 1951, November 30: Amendatory repayment contract, I74r-1685 with Big Bend irrigation district, I74r-1682 with Boise-Kuna irrigation district, I74r-1683 with Nampa-Meridian irrigation district; April 3, I74r-1566 with Wilder irrigation district, provided for payment under the normal and percentage plan of Reclamation Project Act of 1939.
- 1956, June 18: Contract 14-06-100-1005 with Big Bend irrigation district; June 19, contract 14-06-100-1007 with Nampa-Meridian irrigation district, and contract 14-06-100-1006 with Wilder irrigation district; June 25, contract 14-06-100-1008 with Boise-Kuna irrigation district, and contract 14-06-100-1009 with New York irrigation district for rehabilitation and betterment of the New York Canal.
- 1956, September 4: Amendatory repayment contract with the Riverside irrigation district for deferment of delinquent construction repayment installments due under contract of March 1, 1926.

The status of the Arrowrock division repayment on June 30, 1957, is as follows:

Total value of contracted repayment.....	\$15, 907, 811

¹ Decrease. Decreases are due mainly through cancellation of water-right applications. Large decrease in 1927 due to cancellation of delinquent accounts and funding of penalties under 1926 contracts. Decreases in 1933 and 1934 due to deferral of charges under moratorium acts.

² Increase in obligation due to funding of delinquent operation and maintenance charges and penalties and construction penalties.

³ Moratorium period. Acts of April 1, 1932, March 3, 1933, March 27, 1934, June 13, 1935, and April 14, 1936. Charges deferred for calendar years 1931,

\$329,116; 1932, \$301,784; 1933, \$277,790; 1934, \$275,817; 1935, \$271,547; 1936, \$132,991.

⁴ An obligation of \$662,127.46 for repairs, resurfacing, and improvements of Arrowrock Dam, which under the act of April 22, 1940 (54 Stat. 155), is repayable in 20 equal annual instalments beginning in 1942 was carried under Anderson Ranch schedules prior to 1947. These were combined with the Arrowrock division schedule in 1947.

⁵ Decrease. Decrease due to deferral of construction repayment accruals.

constructed for the benefit of the Boise project and private irrigation districts in the Boise Valley. Power is also generated at the dam. The total cost allocated to irrigation now under contract totals \$5,146,511, and is to be repaid in full by the various contractors.

The status of the Anderson Ranch Dam and Reservoir repayment, allocated to irrigation, as of June 30, 1957, is as follows:

Total value of contracted repayment	\$5,146,511
Total matured charges	745,176
Total matured charges repaid	742,074
Total matured charges unpaid	3,102

REPAYMENT CONTRACTS, ANDERSON RANCH DAM

- 1941, July 2: Contract Ilr-1362 with Nampa-Meridian irrigation district, payable in 40 annual installments.
- 1941, August 1: Contract with Boise-Kuna irrigation district, payable in 40 annual installments.
- 1941, August 1: Contract Ilr-1361 with Wilder irrigation district, payable in 40 annual installments.
- 1941, August 7: Contract Ilr-1359 with New York irrigation district, payable in 40 annual installments.
- 1943, June 5: Contract with Farmers Union Ditch Co., Ltd., payable in 40 annual installments.
- 1943, July 26: Contract Ilr-1478 with Settlers irrigation district, payable in 40 annual installments.
- 1943, November 10: Contract with Pioneer irrigation district, payable in 40 annual installments.
- 1944, October 5: Contract Ilr-1480 with New Dry Creek Ditch Co., payable in 40 annual installments.
- 1945, February 26: Contract Ilr-1476 with South Boise Mutual Irrigation Co., Ltd., payable in 40 annual installments.

- 1945, June 25: Contract Ilr-1481 with Boise Valley Irrigation Ditch Co., payable in 40 annual installments.
- 1946, December 11: Contract Ilr-1544 with Big Bend irrigation district, payable in 40 annual installments.
- 1948, January 20: Contract Ilr-1512 with Ballentyne Ditch Co., payable in 40 annual installments.
- 1951, April 3: Amendment to original contract with Wilder irrigation district rescheduling payments.
- 1951, November 30: Amendment to original contract with Boise-Kuna irrigation district rescheduling payments.
- 1951, November 30: Amendment to original contract with Nampa-Meridian irrigation district rescheduling payments.
- 1951, November 30: Amendment to original contract with Big Bend irrigation district rescheduling payments.
- 1951, December 17: Amendment to original contract with Settlers irrigation district rescheduling payments.
- 1954, July 7: Contract 14-06-100-525 with Capital View irrigation district, payable in 40 annual installments.

PAYETTE DIVISION

Lands in the Payette division are located in the lower Payette River Valley and along the north slope of the Boise Valley. The lands are irrigated with water from the Payette River and surplus drainage from the Arrowrock division. There are 75,700 acres of presently irrigable land in the division, of which 22,500 acres are operated by the Emmett irrigation district. Project facilities are Deadwood Dam and Reservoir on the Deadwood River; Cascade Dam and Reservoir on the North Fork of the Payette River; Black Canyon Dam which serves as a diversion structure; the Black Canyon main canal, which serves both Payette and Boise Valley lands; the "C" line pump plant, which pumps water to 26,000 acres of higher Payette lands; and the necessary canals, laterals, and drains. Hydroelectric installations include the Black Canyon powerplant and transmission facilities to serve the "C" line pump plant and intertie with private lines.

The repayable obligation of the water users in the Payette division now totals \$9,439,254. The entire amount is repayable under the terms of the existing contracts with district and individual water users.

Operation and maintenance of the division, except for the reserved works, is carried on by the water users' organizations. The reserved works are the Cascade and Deadwood Dams and storage reservoirs, the Black Canyon diversion dam, and the power facilities.

Repayment contracts.—The existing contract with the Black Canyon irrigation district involves

¹ The total obligation to repay includes \$662,127.46 representing the cost of repairs, resurfacing, and improvements of Arrowrock Dam which under the act of Apr. 22, 1940 (54 Stat. 155), is repayable in 20 equal instalments beginning in 1942. The cost of this work was included in the cost of Anderson Ranch Dam and Reservoir until 1947.

² Reduced by cost Arrowrock repairs which are now included in Arrowrock division.

³ Inclusion of additional construction contracts negotiated.

⁴ Contract amounts adjusted to maximum amounts in accordance with contract provisions.

the repayable allocation of construction cost of the irrigation and storage works and one-fourth the cost of rehabilitation and betterment of Black Canyon Dam. The Emmett irrigation district contract includes one-fourth the cost of rehabilitation and betterment of Black Canyon Dam.

CONTRACTS

- 1918, January 2: Contract with Black Canyon irrigation district for water rights for 6,873.83 acres at \$70 per acre, 20 graduated installments.
- 1921, November 18: Contract I1r-251 with Emmett irrigation district to repay one-half of construction cost of Black Canyon Dam and pumping plant in 20 graduated installments.
- 1926, April 21: Contract I1r-251 with Black Canyon irrigation district. Contract changed method of repayment to crop-production basis and funded delinquent charges and penalties.
- 1927, October 3: Contract I1r-251 with Black Canyon irrigation district for construction of Payette division.
- 1929, September 18: Contract with Black Canyon irrigation district for drainage work.
- 1932, June 30: Contract with Emmett irrigation district extending time for repayment to 40 years, equal semiannual installments beginning 1932.
- 1934, August 20: Contract with Black Canyon irrigation district for drainage work.
- 1946, April 2: Contract I74r-203 with Drainage District No. 4 for drain construction.

- 1954, March 17: Amendment to original contract with Drainage District No. 4 to increase contract amount.
- 1954, September 2: Amendment to contract with Black Canyon irrigation district to increase contract amounts and change method of payment.
- 1955, October 4: Amendment to contract with Emmett irrigation district to increase contract amounts.
- 1956, April 12: Supplement to amendatory contract with Black Canyon irrigation district to conform its provisions to the rehabilitation and betterment program.
- 1956, June 4: Supplement to amendatory contract with Black Canyon irrigation district to provide for payment for equipment and supplies transferred to district.

The status of the Payette division repayment on June 30, 1957, is as follows:

Total value of contracted repayment	\$9,439,254
Total matured charges	1,342,963
Total matured charges repaid	1,342,963
Total matured charges unpaid	0

Rehabilitation and betterment contracts.—Cost of rehabilitation and betterment of Black Canyon Dam will be repaid one-fourth by Black Canyon irrigation district lands, one-fourth by Emmett irrigation district lands, and one-half from power revenues.

BOULDER CANYON PROJECT

ALL-AMERICAN CANAL SYSTEM

YUMA, ARIZ.

The construction of the All-American Canal System for delivery of water to the Imperial and Coachella Valleys in California was authorized under the Boulder Canyon Project Act of December 21, 1928 (45 Stat. 1057).

Project features include the Imperial Dam and desilting works, the main All-American canals to the Imperial and Coachella Valleys, and the Coachella distribution system and protective works. The project was developed to provide substitute service to the Imperial Irrigation District in Imperial County, Calif., to which water was formerly delivered through a canal constructed partially in Mexico, to provide a supply of water to the Coachella Valley County Water District in Riverside County, Calif., and a supplemental supply to the city of San Diego. Although obligated for payment of construction and operation and maintenance costs, the city of San Diego has merged its water rights with the Metropolitan Water District for delivery above Parker Dam.

The cost of constructing the All-American Canal System, the Coachella distribution system, and appurtenant works was \$60,738,412.02 through June 30, 1957. Plans for the Pilot Knob Mesa development and minor drainage and flood protective works would bring the total cost to \$68,344,647.

This is allocated as follows:

Nonreimbursable or nonrecoverable:	
Irrigation (act of Aug. 31, 1951)-----	\$3, 260, 650
Flood protection (act of Aug. 4, 1939)---	4, 838, 760
Reimbursable:	
Irrigation-----	59, 779, 594
Municipal water-----	465, 643
Total-----	68, 344, 647

Operation and maintenance of the Imperial and Laguna Dams has been retained by the United

States in accordance with a contract of March 4, 1952, the cost of which is financed primarily from advances by water users. Except for the Coachella Canal below engineer station 2604, which has been transferred to Coachella Valley County water district, the All-American Canal is being operated and maintained by the Imperial irrigation district.

Repayment contracts.—The cost of constructing the All-American Canal system and appurtenant works is for repayment by Imperial irrigation district, Coachella Valley County water district, and the city of San Diego, under contracts dated respectively December 1, 1932, October 15, 1934, and October 2, 1934. Works were declared completed in 1952 and repayment of construction charges by the contractors commenced on March 1, 1955. Imperial irrigation district has made payments of \$1,315,522.42 from net power proceeds in accordance with articles 14 and 32 of the contract of December 1, 1932. \$625,500.03 of this amount has been applied against payments due, leaving \$690,022.39 for application against future accruals.

CONTRACTS

1932, December 1: Imperial irrigation district. Contract Ilr-747. Construction obligation of \$25,020,000.90, repayable in 40 annual installments at rate of 1 percent per year for the first 5 years, 2 percent per year for the next 10 years, and 3 percent per year for the last 25 years. The initial payment date was March 1, 1955, and as of June 30, 1957, all payments were current.

1934, October 2: City of San Diego. Contract Ilr-1151. Construction obligation of \$465,642.68, repayable in 38 annual installments at rate of 1 percent per year for first 5 years, 2 percent per year for the next 10 years, 3 percent per year for the next 21 years, and 6 percent per year for the last 2 years. The initial payment date was March 1, 1955, and as of June 30, 1957, all payments were current.

934, October 15: Coachella Valley County water district. Contract Ilr-781. Construction obligation of \$13,458,562.03, repayable in 40 annual installments at rate of 1 percent per year for first 5 years, 2 percent per year for next 10 years, and 3 percent per year for last 25 years. The initial payment date was March 1, 1955, and as of June 30, 1957, all payments were current.

952, March 4: Imperial irrigation district. Contract amendatory and supplemental to contract of December 1, 1932, declaring works completed.

955, December 27: Coachella Valley County water district. Contract supplemental to contract of October 15, 1934. Provides that district may hold to maturity certain United States savings bonds purchased by power rentals received for power rights and privileges on All-American Canal, at which time the proceeds therefrom are to be paid to the United States for deposit in the Colorado River Dam fund, and applied against the installment payments to become due under the 1934 contract.

The current allocation of costs of Imperial Dam and desilting works, the main All-American Canal, and the Coachella Branch of the All-American Canal to the three California contractors is as follows:

Imperial irrigation district.....	\$25,020,000.90
City of San Diego.....	465,642.68
Coachella Valley County water district..	13,458,562.03

A proportionate share of Imperial Dam costs is repayable by Gila project contractors.

Distribution system—Coachella division.—The irrigation distribution system in the Coachella Valley was constructed at a total estimated cost of \$16,760,650. However, the contract of December 22, 1947, with the Coachella Valley County

water district indicated that the distribution system would be constructed at a cost not to exceed \$13.5 million. Pursuant to the act of August 31, 1951 (65 Stat. 248), it was determined by the courts that the district would not be held liable for the costs in excess of \$13.5 million. The non-recoverable portion of the distribution system costs, therefore, is \$3,260,650. In addition, flood protective works costing \$4,838,759.63 were declared nonreimbursable in accordance with the act of August 4, 1939 (53 Stat. 1187).

The reimbursable cost of the Coachella Valley distribution system, totaling \$13,500,000, is to be allocated for repayment by irrigation blocks over a 40-year period following the end of an 8-year development period for each block. The initial payment will be due from irrigation blocks 1 and 2 on March 1, 1959, from block 3 on March 1, 1960, from block 4 on March 1, 1961, and from blocks 5 and 6 on March 1, 1963. However, an allocation of costs among blocks has not been made pending the outcome of negotiations between the Coachella Valley County water district and the Bureau of Indian Affairs concerning the furnishing of water to approximately 10,000 acres of Indian lands and the possible establishment of an additional block or blocks for those lands.

The status of repayment of the All-American Canal System on June 30, 1957, is as follows:

Total value of contracted repayment....	\$52,444,205.61
Total matured charges.....	973,605.16
Total matured charges repaid.....	973,605.16
Total matured charges unpaid.....	0

BOULDER CANYON PROJECT

HOOVER DAM AND POWERPLANT

BOULDER CITY, NEV.

The Boulder Canyon project was authorized by the act of December 21, 1928 (45 Stat. 1057), subject to the terms of the Colorado River Compact. The Boulder Canyon project Adjustment Act (54 Stat. 774) dated July 19, 1940, provided for certain changes in the original plan. The act of June 29, 1948 (62 Stat. 1112), provided for the deferment of repayment of certain nonproject costs.

The project was constructed primarily for (1) controlling floods, (2) improving navigation and regulation of the Colorado River, (3) providing for storage and delivery of stored water for reclamation of public lands and other beneficial uses within the United States, and (4) generating electric energy. The main features of the project include the dam and reservoir, hydroelectric plant, and high-voltage switchyards. Electric energy is delivered to the allottees at the high-voltage switchyards and transmitted from that point to loads in Arizona, California, and Nevada over facilities which are owned or arranged for by the power allottees.

The construction cost to May 31, 1957, was \$167,548,999, and the total cost of the project is estimated to be \$174,205,934. Expenditures were made from the Colorado River Dam fund created by advances from the general treasury on appropriation by Congress through fiscal year 1950. Thereafter expenditures have been made from appropriations for construction and rehabilitation, Bureau of Reclamation. The major plant has been substantially completed and placed in operation and is now serving the southwestern area of the United States with large quantities of

power. With the installation of generating unit N-8 currently scheduled for fiscal year 1963, the project will be completed. Through the sale of power and other incidental revenues, the project has accumulated \$84,157,097 as of May 31, 1957, which has been used for reimbursement to the United States Treasury of advances and interest on advances to the Colorado River Dam fund and other construction appropriations. In addition, \$12,000,000 has been paid or reserved for payment to the States of Arizona and Nevada in lieu of taxes and \$10,000,000 to the Colorado River development fund for investigations of potential projects in the Colorado River Basin. With the exception of \$25,000,000 allocated to flood control and the nonproject costs determined in accordance with the act of June 29, 1948 (62 Stat. 1112), the cost of construction, operation, maintenance, and replacement will be repaid to the United States in 50 years with interest at 3 percent per annum by revenues from the sale of power and water. These revenues are guaranteed by formal contracts with the power allottees with rates based on the repayment of construction cost within a 50-year period. Thereafter, repayment of the flood control and nonproject cost allocation is to be made from net revenues.

The dam and powerplant building and their appurtenances are owned, operated, and maintained by the United States. The generating, transforming and switching facilities are owned by the United States, but are operated and maintained by the Department of Water and Power of the city of Los Angeles and the Southern

California Edison Co. as agents for the United States.

The allocation of the construction cost is summarized as follows:

Total estimated cost.....	\$174, 205, 934
Commercial power.....	145, 955, 612
Flood control.....	25, 000, 000
Nonprojects cost.....	3, 250, 322

Contracts for sale of power (as amended to Feb. 13, 1957)

Contract No.	Contractor	Firm energy allocation, percent	Date of execution	Date of termination
Ilr-1334	Department of water and power.....	17. 5554	May 29, 1941	May 31, 1987
Ilr-1336	Metropolitan water district.....	35. 2517	do.....	Do.
Ilr-1455	State of Arizona.....	17. 6259	Nov. 23, 1945	Do.

Ilr-1341	California Electric Power Co.....	. 8813	do.....	Do.
Ilr-1339	City of Burbank.....	. 5573	do.....	Do.

NOTES: Metropolitan water district has the first right to all unused firm and all secondary energy for pumping only. The city of Los Angeles, Southern California Edison Co., and California Electric Power Co. are obligated to take and/or pay for respectively 55-40-5 percent of all firm energy allocated to the States but unused by them or metropolitan water district. The city and companies have also the right to use in the same respective percentages, secondary energy unused by metropolitan water district.

United States reserves up to 20,000 kilowatts to be deducted equally out of the allotments to the city of Los Angeles and the Southern California Edison Co. United States can use reserved power for its own use or for resale in its construction or operating camps, or for any purpose within an area defined in the regulations.

Allocation to the cities of Burbank, Pasadena, and Glendale is generated and transmitted by the city of Los Angeles.

RECLAMATION REPAYMENTS

BUFFALO RAPIDS PROJECT

GLENDIVE, MONT.

The Buffalo Rapids project, located along the Yellowstone River in Custer, Dawson, and Prairie Counties, Mont., consists of two divisions.

Glendive unit was approved by the President, September 27, 1937, under Emergency Relief Act of 1937. Glendive Extension was approved by the President May 15, 1940, under Water Conservation and Utilization Program Act of May 10, 1939 (53 Stat. 685). Glendive Unit and Extension constitute the First Division.

Construction of the Second Division consisting of Shirley, Terry, and Fallon units was approved by the President on October 11, 1939, and May 15, 1940, under the water conservation and utilization program. The act of October 10, 1949 (63 Stat. 725), authorized the Secretary of the Interior to complete the construction of irrigation facilities including necessary drainage works on the First and Second Divisions of the project.

Major works for the project are:

First Division: An intake channel of 1,000 feet, pumping plant with a capacity of 330 cubic feet per second and 103-foot lift; 35 miles of canal and 58 miles of laterals. Drainage system is being constructed as needed.

Second Division: Shirley unit—pumping plant with a capacity of 111 cubic feet per second and 51-foot lift, 13.3 miles of canal, and 15.7 miles of laterals. Terry unit—pumping plant with a capacity of 61.5 cubic feet per second and 109-foot lift, 7.5 miles of canal, and 15.4 miles of laterals. Fallon unit—pumping plant with a capacity of 72 cubic feet per second and 45-foot lift, 6.8 miles of canal, and 8.0 miles of laterals.

Allocation and repayment of costs:

	<i>First Division</i>	<i>Second Division</i>	<i>Total</i>
Total construction cost.....	\$2,604,098	\$2,601,305	\$5,205,403
Operation and maintenance deficit.....	15,292	32,849	48,141
Total estimated cost.....	2,619,390	2,634,154	5,253,544
Allocation of costs to irrigation.....	2,619,390	2,634,154	5,253,544
Irrigation repayment.....	930,000	696,000	1,626,000
Water users equity.....	12,360	9,145	21,505
Nonreimbursable ¹	1,677,030	1,929,009	3,606,039

¹ Includes Department of Agriculture costs for First Division, \$232,323, and Second Division, \$323,003. Authorized by act of Oct. 10, 1949 (Public Law 336, 81st Cong.).

The irrigation districts have assumed the operation and maintenance of the district works through a board of control.

Repayment contracts.—Repayment contracts were executed March 22, 1954, with Buffalo Rapids irrigation districts No. 1 and No. 2. The contracts provide for the repayment of a \$60 total obligation per irrigable acre over a 60-year period, pursuant to the act of October 10, 1949.

PUBLIC NOTICES AND CONTRACTS

- 1940, May 3: Public notice. Temporary water rental charge for the irrigation season of 1940 and thereafter until further notice will be \$1 per acre-foot under approved applications.
- 1947, June 9: Public notice. Temporary water rental charge for the irrigation season of 1947 and thereafter until further notice will be \$1 per acre-foot when available under approved applications for irrigable lands in the Shirley and Terry units of the Second Division of the Buffalo Rapids project.
- 1954, March 22: Repayment contract No. 14-06-600-1216 with Buffalo Rapids irrigation district No. 1 and No. 14-06-600-1217 with Buffalo Rapids irrigation district No. 2, under which each of the districts

agree to pay a total construction obligation of \$60 per irrigable acre over a period of 60 years, not to exceed a total of \$930,000 for district No. 1 and \$696,000 for district No. 2, these amounts to be determined at the time the Secretary announces completion of the district works when such irrigable acreage is to be determined.

District No. 1:

Total value of contracted repayment.....	\$930,000
Total matured charges.....	40,500
Total matured charges repaid.....	33,850
Total matured charges unpaid.....	6,650

District No. 2:

Total value of contracted repayment.....	696,000
Total matured charges.....	25,800
Total matured charges repaid.....	21,500
Total matured charges unpaid.....	4,300

Status of the two irrigation district repayment contracts as of June 30, 1957, is as follows:

Construction repayment history

IRRIGATION DISTRICT NO. 1

¹ Application of construction payments received from lands purchased for subdividing.

BUFORD-TRENTON PROJECT

WILLISTON, N. DAK.

This project was first authorized on January 23, 1906, by the Secretary of the Interior under the Reclamation Act of June 17, 1902. Under the act of May 26, 1926 (44 Stat. 653), costs in the amount of \$221,423 were charged off in the accounts of the United States as a loss to the Reclamation fund. The balance of the construction costs, \$1,999, had been reimbursed from project revenues.

Construction of this project with some change in area and in plans was approved by the President on September 23, 1939, under the water conservation and utility provision of the Interior Department Appropriation Act of 1940, with an estimated cost of \$1,500,000. Of this amount, \$870,000 was to be nonreimbursable, \$220,000 to be reimbursable to the Department of Agriculture, and \$410,000 to the Bureau of Reclamation for project facilities. On March 14, 1945, the President approved the designation of the project as a war food project under the provisions of the Water Conservation and Utilization Act of October 14, 1940 (54 Stat. 1119), as amended on July 16, 1943 (57 Stat. 566). The estimated cost was increased by \$276,000 on August 7, 1942, by Presidential approval, \$138,000 to be returned to the Department of Agriculture and \$138,000 to the Bureau of Reclamation. Thus the total amount reimbursable to the Bureau of Reclamation for project works was \$548,000.

The project works, constructed to supply water

to approximately 14,800 acres, consist of a pumping plant with a capacity of 240 cubic feet per second to lift water 25 feet, 21.8 miles of canal, 38.8 miles of laterals, and approximately 32 miles of drains.

From September 15, 1944, to January 1, 1955, the project was operated by the Buford-Trenton Mutual Aid Corp. under an irrigation lease agreement entered into with the United States on September 14, 1944. Since January 1, 1955, the Buford-Trenton irrigation district has operated the project under a similar lease agreement.

Public Law 85-58 approved on June 21, 1957 (71 Stat. 184), provided for the purchase of lands in the Buford-Trenton irrigation district by the Corps of Engineers in lieu of protection of such lands in connection with the operation of the Garrison Dam and Reservoir on the Missouri River. The purchase price of these lands included the construction charge assignable to 2,987 acres of irrigable land amounting to \$110,613. The same act provided that the construction charge obligation assignable to the remaining lands in the district should be nonreimbursable. This construction charge obligation included an item for completion of minor construction now estimated to be \$152,612.

Based on the above legislation and the act of October 14, 1940 (54 Stat. 119), the reimbursability of the actual and estimated total cost of project facilities is as follows:

Item	Total cost	Nonreimbursable		Reimbursable
		October 1940	June 1957	
Regular features.....	\$941, 242	\$391, 442	\$439, 187	\$110, 613
Protective works.....	149, 019	149, 019	-----	-----
Estimated minor completion.....	152, 612	-----	152, 612	-----
Total.....	1, 242, 873	540, 461	591, 799	110, 613

BURNT RIVER PROJECT

HUNTINGTON, OREG.

Construction of Unity Dam and Reservoir, located on the Burnt River in Baker County, about 40 miles southwest of Baker, Oreg., was authorized by the Secretary of the Interior on September 25, 1935, upon his finding that the project was feasible. It was approved by the President under the Emergency Relief Act of 1935.

The Bureau of Reclamation built only the storage works for an irrigated area of approximately 5,000 acres which had for many years depended entirely on the natural flow of Burnt River for its water supply. Unity Dam and Reservoir, by providing for storage of floodwater and thus making possible the exchange of stored water for natural streamflow, not only assured an adequate supply for lands lying downstream from the reservoir but increased the supply for lands above the reservoir. Construction of the storage facilities began August 13, 1936, with storage water first available on January 1, 1939.

The total cost of constructing the storage system was \$601,026. The entire amount, except for \$1,291 in contributions, is repayable under the terms of the repayment contract with the irrigation district.

The dam and reservoir are operated by the Burnt River irrigation district.

Repayment contracts.—The Burnt River irrigation district (formerly Bridgeport irrigation district) contracted with the Bureau of Reclamation to build Unity Dam and Reservoir at a cost not to exceed \$550,000. Subsequently, due to a change in location of the dam which necessitated moving a bridge and section of the State highway, a supplemental contract was executed to increase the limitation on construction costs to not exceed \$600,000. Repayment is scheduled in 80 equal semiannual installments of \$7,496.42 commencing in 1940 with last payment due in 1979.

CONTRACTS

1935, December 24: Contract Ilr-821 with Burnt River irrigation district covers construction of Unity Dam and Reservoir at a cost not to exceed \$550,000, repayable in 80 semiannual installments.

1937, October 2: Contract Ilr-821 amended to provide for increasing limitation of obligation not to exceed \$600,000. Otherwise original contract remains in full force.

The summary of status of repayment contracts:

Total value of contracted repayment.....	\$599,735
Total matured charges.....	269,893
Total matured charges repaid.....	269,893
Total matured charges unpaid.....	0

CACHUMA PROJECT

GOLETA, CALIF.

The Cachuma project, located in southern Santa Barbara County, Calif., was authorized on March 4, 1948, by the Secretary of the Interior pursuant to section 9 (a) of the Reclamation Project Act of 1939 (55 Stat. 1187). On March 24, 1948, the Secretary submitted his findings of feasibility to the Congress of the United States. The purpose of this project is to furnish new and supplemental domestic and irrigation water to the project area.

Cachuma Dam and Reservoir, with a capacity of 205,000 acre-feet, stores surplus floodwaters of the Santa Ynez River after prior rights have been satisfied in the Santa Ynez Valley. Water is diverted through the 6.4-mile Tecolote tunnel to the south coast area. From the tunnel outlet the water is carried through the 26-mile south coast conduit, supplying water to the Goleta, Montecito, Summerland, and Carpinteria County water districts, and to the city of Santa Barbara. The Montecito County water district had an existing irrigation distribution system adequate to handle project water. An extensive lateral distribution system has been constructed for irrigation use and for municipal and miscellaneous uses in Goleta, Summerland, and Carpinteria County water districts.

The official estimated cost of the project is \$43,360,456, including the cost of distribution systems, which aggregates \$4,560,168. The entire cost of the project is reimbursable.

Allocation of estimated project costs:

Repayment of reimbursable costs:

Irrigation.....	\$18, 430, 137
Distribution systems.....	4, 560, 168
Municipal and industrial water.....	20, 370, 151
Total.....	43, 360, 456

The distribution systems were constructed by the Bureau of Reclamation under separate repayment contracts with the individual county water districts involved. Project repayment will be accomplished under water service contracts with the Santa Barbara County Water Agency, delivering water to the individual districts. This agency entered into a master water service contract with the United States on September 12, 1949, and in turn has entered into subcontracts with the city of Santa Barbara and the Goleta, Carpinteria, Montecito, and Summerland County water districts and the Santa Ynez River water conservation district for the purpose of constructing works and supplying water.

The Bureau has transferred the operation of the project to the water users. Cachuma Dam, however, will be operated by the United States until 1962. Each individual district will be responsible for operation and maintenance of distribution systems built by the Government.

Repayment and water service contracts.—A 40-year contract under section 9 (e) and 9 (c) 2 of the Reclamation Project Act of 1939 (55 Stat. 1187) has been executed with the Santa Barbara County Water Agency which requires a gradually increasing minimum use of water by the member districts.

WATER SERVICE CONTRACT

Santa Barbara County Water Agency

Date of contract.....	Sept. 12, 1949.
Date of initial water delivery.....	Feb. 28, 1956.
Type of contract.....	9 (e).
Contract period.....	40 years.
Maximum water rates:	
Irrigation.....	\$25 per acre-foot.
Municipal.....	\$35 per acre-foot.

Minimum water deliveries:¹

After year:

5.....	8,700 acre-feet.
10.....	12,400 acre-feet.
15.....	16,000 acre-feet.
20.....	19,300 acre-feet.
25.....	22,900 acre-feet.
30.....	26,300 acre-feet.
35.....	29,200 acre-feet.

¹ Maximum quantity limited by supply. Includes 500 acre-feet for Santa Ynez River water conservation district at a rate of \$10 per acre-foot.

Contracts covering the costs of construction of the distribution systems under section 9 (d) of the Reclamation Project Act of 1939 (55 Stat. 1187) have been executed with the Goleta, Summerland, and Carpinteria County water districts. Construction of Tecolote tunnel made available seepage water which has been delivered under contract to the various water districts and the city of Santa Barbara, with receipts being used to defray current operation and maintenance costs. A total of

\$23,038 in excess of operating expense had been collected from this source through February 28, 1956, when the long-term contract went into effect.

CONTRACTS

1952, April 10: Contract I75r-4561 with Goleta County water district for \$3,600,000.

1953, April 17: Contract 14-06-200-550 with Carpinteria County water district for \$1,800,000.

1953, June 29: Contract 14-06-200-949 with Summerland County water district for \$400,000.

Payout schedule.—The cost of the water supply facilities is to be returned to the United States under a water sales contract with the Santa Barbara County Water Agency, which in turn sells the water to its member units. This 40-year contract will, to the extent necessary, be renewed by a subsequent contract with the same organization to insure the full return of the Government's investment.

CANADIAN RIVER PROJECT

SANFORD, TEX.

The Canadian River project was authorized by act of December 29, 1950 (64 Stat. 1124).

The project is located on the High Plains region of northwest Texas. Proposed project facilities include a multiple-purpose dam and reservoir on the Canadian River near Sanford, Tex., and a pipeline system with sufficient capacity to deliver about 140,000 acre-feet annually to the various cities participating in the project. The reservoir, in addition to the conservation of presently unused water to supplement existing ground water supplies for the various cities, will provide pro-

tection to lands and improvements from flood damage, improvement of fish and wildlife resources, recreational opportunities of substantial magnitude, and sediment control.

The total estimated cost of the project is \$95,500,000 (January 1957 prices). All further activities are being withheld pending advice from the Canadian River Municipal Water Authority concerning the final allocation of the available water supply between the project cities and the question of Federal financing for the project.

CARLSBAD PROJECT

CARLSBAD, N. MEX.

The Carlsbad project was originally constructed by a private development company, but was damaged extensively by floodwaters in October 1904. On November 28, 1905, the Secretary of the Interior authorized purchase and rehabilitation of the project.

The Bureau of Reclamation work in connection with the project included rehabilitation of the canal and distribution systems and the Avalon and McMillan Reservoirs in Eddy County to irrigate 25,055 acres of land. The Alamogordo Dam, approved by the President on November 6, 1935, was constructed on the Pecos River in De Baca County approximately 250 river miles upstream from Carlsbad, N. Mex., to augment storage facilities of the project. Public Law 465, 83d Congress (July 1, 1954), provided for enlarging the spillway of Alamogordo Dam on a nonreimbursable basis to accommodate floods of major proportions.

The United States operated the Carlsbad project until September 30, 1949, at which time the Carlsbad irrigation district assumed responsibility of the care, operation, and maintenance of the project, except for the Alamogordo Dam.

The total estimated cost of the project is \$5,372,487, including funded charges of \$93,396 and \$18,091 allowable additional costs under the current repayment contract.

Construction and rehabilitation of irrigation facilities.....	\$4, 271, 479
Construction—spillway enlargement.....	1, 007, 612
<hr/>	
Total construction cost.....	5, 279, 091
Funded operation and maintenance.....	76, 541
Funded penalties.....	16, 855
<hr/>	
Total estimated project cost.....	5, 372, 487
<hr/>	

Allocation of costs:

Reimbursable costs:

Irrigation (repayment contract).....	\$3, 766, 761
Contributions.....	7, 980
Water and building rentals.....	33, 421
<hr/>	
Subtotal.....	3, 808, 162
<hr/>	

Nonreimbursable costs:

Flood control.....	1, 007, 612
CCC costs.....	181, 829
Chargeoff by Congress.....	374, 884
<hr/>	

Subtotal..... 1, 564, 325

Total allocation..... 5, 372, 487

Repayment contracts.—The total actual cost of constructing and rehabilitating the original project was covered in the repayment contract. The total actual cost of constructing the Alamogordo Dam is covered in a supplemental repayment contract.

Repayment on the original contract in the amount of \$1,464,650 began in 1910. Final payment by the Carlsbad irrigation district, due in 1946 under the 1932 contract, has been made. The supplemental repayment contract was signed on January 16, 1936, in the amount of \$2,600,000, to be repaid in 40 equal annual installments beginning in 1946.

PUBLIC NOTICES AND CONTRACTS

1907, December 17: Public notice. Construction charge \$31 per acre, payable in 10 equal annual installments.

1912, February 17: Public notice. Construction charge increased to \$45 per acre, payable in 10 graduated annual installments.

1915, April 10: Public notice. Construction charge \$60 per acre, payable in 20 graduated annual installments.

¹ Decrease. Decreases are due to funding of charges and to cancellation of water-right applications.
² 1912. Accruals canceled under 1912 public notice.
³ 1915. Reclamation Extension Act, Aug. 13, 1914.
⁴ Moratorium period. Acts of Apr. 1, 1932, Mar. 3, 1933, Mar. 27, 1934, June 13, 1935, and Apr. 14, 1936. Construction charges deferred for calendar years 1932, \$38,930; 1933, \$42,226; 1934, \$40,840; 1935, \$40,451; 1936, \$20,061.

⁵ Increase in obligation due to adding \$2,500,000 for Alamogordo Reservoir etc., under 1936 contract.
⁶ Decrease to correct prior error in computations.
⁷ Rehabilitation contract executed for work on McMillan Dike.
⁸ Scheduled accruals for calendar year 1955 deferred and rescheduled to Aug. 1, 1986, and Feb. 1, 1987.

- 1916, September 2: Public notice. Supplemental construction. Rate \$10 per acre, payable in additional installments after 20-year repayment period.
- 1919, June 24: Public notice. Construction charge \$69 per acre, payable in 20 graduated annual installments.
- 1932, November 14: Contract Ilr-717 with Carlsbad irrigation district. District assumed obligations under individual water-right application. Unpaid construction and operation and maintenance charges for 1930 and 1931 to be paid in 5 and 8 years with 6 percent interest.
- 1936, January 16: Contract Ilr-717 with Carlsbad irrigation district. Covers construction of Alamogordo Reservoir and concrete lining of canals at estimated cost of \$2,500,000. Payable in semiannual installments in 40 years beginning in 1944.
- 1943, October 5: Contract with Carlsbad irrigation district. Maximum obligation under 1936 contract raised to \$2,600,000, and beginning of repayment deferred to year 1946.
- 1955, May 10: Contract 14-06-500-168 with Carlsbad irrigation district for \$25,000 for rehabilitation accomplished by emergency funds. Repayable in 25 years commencing in 1956.

The status of repayment on June 30, 1957, is as follows:

Also contract 14-06-500-168 executed for repayment of \$25,000 for repair on McMillan Dam and Reservoir.⁵ Includes increase of \$18,091 estimated cost of possible additions to Alamogordo Dam and Reservoir allowable under the \$2,600,000 repayment contract.

CENTRAL VALLEY PROJECT

SACRAMENTO, CALIF.

The finding of feasibility authorizing initial features of the Central Valley project under the provisions of the Reclamation Act of December 5, 1924, was approved on December 2, 1935, by the President of the United States. A congressional reauthorization of the project under Reclamation law was provided in section 2 of the Rivers and Harbors Act of August 26, 1937 (50 Stat. 859), and by the Rivers and Harbors Act of October 17, 1940 (54 Stat. 1198). By act of October 14, 1949 (63 Stat. 852), Congress reauthorized the project to include the operation of Folsom Reservoir and the construction of Folsom powerplant, Nimbus Dam and powerplant, and the Sly Park unit of the American River and Cosumnes River Basins. By act of September 26, 1950 (64 Stat. 1036), Congress reauthorized the project to include the Sacramento River Canals unit. Additional works for waterfowl management were authorized by the act of August 27, 1954 (68 Stat. 879). The reauthorization of August 12, 1955 (69 Stat. 719), added the Trinity River division.

The features of the Central Valley project are a part of a multipurpose basin development. Presently authorized features, when complete and in full operation, will provide sufficient water so that approximately 1,200,000 irrigable acres of land may be irrigated. Of these lands, 655,000 acres were irrigated in 1955. In addition, the project will provide water for municipal and industrial purposes and generate an average of 3,500,000,000 kilowatt-hours of hydroelectric energy annually, as well as provide flood control, navigation, salinity control, fish and wildlife and recreation benefits.

The initially authorized features consist of Shasta Dam, forming a reservoir of 4,500,000 acre-foot capacity; Shasta powerplant of 379,000-kilowatt nameplate capacity; Keswick Dam and

Reservoir with a capacity of 23,700 acre-feet; Keswick powerplant of 75,000-kilowatt nameplate capacity; the Delta Cross Channel with a design capacity of 3,500 second-feet; the Contra Costa Canal and pumping plants with 350 second-feet initial capacity; the Tracy pumping plant with 4,600 second-feet capacity; and the 117-mile Delta-Mendota Canal with 4,600 second-feet initial capacity. Also initially authorized are Friant Dam and Reservoir with 520,000 acre-foot capacity; the 36-mile Madera Canal of 1,000 second-feet initial capacity; the 153-mile Friant-Kern Canal of 4,500 second-feet initial capacity; irrigation water distribution systems for the delivery of project water; and the electrical transmission system consisting of three 230-kilovolt lines between Shasta and Keswick and the Delta, together with essential substations, switchyards, and lower voltage transmission lines to insure dependable service to project pumping plants and other points of commercial sale. The reauthorization of October 14, 1949, added Folsom Dam and Reservoir, with 1,000,000 acre-foot capacity; Folsom powerplant of 162,000-kilowatt nameplate capacity; and the Nimbus Dam and the Nimbus powerplant of 13,500-kilowatt nameplate capacity; transmission lines to connect with the initial Central Valley project transmission system; and the Sly Park Dam and Reservoir with 41,000 acre-foot capacity on Sly Park Creek, a tributary of the Cosumnes River, a diversion dam on Camp Creek, a tunnel to carry water to Sly Park Reservoir, and a conduit to convey water to the El Dorado irrigation district. The reauthorization of September 26, 1950, added the Sacramento Canals unit, including Corning Canal, the Tehama-Colusa Canal, and the Chico Canal, with diversion works, pumping plants, and distribution systems. Additional works for waterfowl management were

authorized by the act of August 27, 1954. The reauthorization of August 12, 1955, added the Trinity River division, including Trinity Dam, Lewiston Diversion Dam, and appurtenant tunnels to bring Trinity River water into the Sacramento River. Studies are being conducted to determine whether the power facilities will be built by the United States or by private interests.

All completed project features are now operated by the United States except the Sly Park unit which has been transferred to the water users for care, operation, and maintenance. Present repayment contracts provide that all distribution systems will be transferred to water users for care, operation, and maintenance upon completion. By June 30, 1957, five distribution systems had been so transferred.

The allocation and repayment of costs:

Total estimated project costs.....	\$761, 627, 085
Included in repayment analysis:	
Folsom facilities ¹	61, 870, 300
Subtotal.....	<u>823, 497, 385</u>
Excluded from repayment analysis:	
Distribution systems.....	-65, 998, 917
Rewind Shasta generator unit #4.....	-166, 776
Friant fish hatchery pipeline.....	-66, 692
Net total allocated.....	<u>757, 265, 000</u>
Allocation of costs:	
Reimbursable:	
Irrigation.....	384, 605, 000
Power (commercial).....	292, 037, 000
Fish and wildlife.....	2, 737, 000
Municipal water supply.....	17, 419, 000
Subtotal.....	<u>696, 798, 000</u>
Nonreimbursable:	
Navigation.....	12, 940, 000
Flood control.....	35, 684, 000
Recreation.....	215, 000
Fish and wildlife.....	11, 628, 000
Subtotal.....	<u>60, 467, 000</u>
Total allocated cost.....	<u>757, 265, 000</u>

Repayment of reimbursable costs:

From power revenues:	
For electric plant investment....	\$292, 037, 000
For irrigation plant investment....	105, 287, 300
For fish and wildlife investment....	240, 700
Subtotal.....	<u>397, 565, 000</u>
From municipal water revenues:	
For municipal plant investment....	17, 419, 000
For irrigation plant investment....	157, 400
Subtotal.....	<u>17, 576, 400</u>
From irrigation water revenues:	
For irrigation plant investment....	279, 160, 300
From fish and wildlife revenues:	
For fish and wildlife plant investment.....	2, 496, 300
Subtotal.....	<u>696, 798, 000</u>
Repayment of water distribution system:	
From irrigation water users.....	65, 998, 917
Total.....	<u>762, 796, 917</u>

¹ Constructed by Corps of Engineers.

The cost of the water distribution systems will be repaid by contracts authorized by section 9 (d) of the 1939 act. These systems will be repaid in 40 years after an appropriate development period.

Repayment arrangements.—The costs of the Central Valley project will be repaid by the beneficiaries of the three principal reimbursable project functions: irrigation, municipal and industrial water use, and commercial power. Water service contracts authorized by section 9 (e) and 9 (c) (2) of the 1939 Reclamation Project Act (53 Stat. 1187) have been executed with districts for service from the principal project features. Power service is being provided to preference customers and one private utility. It is contemplated that the net revenues from commercial power and municipal and industrial water in excess of that required for repayment of the allocation of these functions will be applied to assist in the repayment of project costs allocated to irrigation to the extent that revenues are not available from irrigation during the repayment period.

RECLAMATION REPAYMENTS

Irrigation water service contracts

District	Date of contract	Initial delivery date	Type of contract	Contract period (years)	Maximum water rates		Minimum water deliveries (acre-feet) ¹		Maximum water deliveries (acre-feet)

Types of contract:

WS—Water service

WS & D—Water service and distribution system.

¹ Minimum contract quantities in effect after the first 5 years of water service.² Date of execution of original water service contract (or water service and distribution system, if combined); amendments have followed; water quantities are from latest amendment.³ Rate of \$1 per acre-foot for fiscal year 1955 to 1957, inclusive; \$2 per acre-foot for fiscal year 1958 to 1960, inclusive; \$2.50 per acre-foot thereafter. The district operates and maintains the Unit.

Distribution system repayment contracts

District	Date of contract ¹	Contract number	Maximum contract limit ¹	Repayment period (years)	Development period	Initial construction payment
Contra Costa Canal: Contra Costa County water district	² Sept. 18, 1951	175r-3401	\$1, 288, 000	40	³ 5	³ Jan. 1, 1959
Delta-Mendota Canal: Plain View irrigation district	May 22, 1953	14-06-200-785	838, 000	40	10	Aug. 1, 1965
Friant-Kern Canal: Delano-Earlimart irrigation district	Aug. 11, 1951	175r-3327	14, 509, 000	40	2	Aug. 1, 1961
Exeter irrigation district	Nov. 8, 1950	175r-2508	4, 373, 000	40	2	Do.
Ivanhoe irrigation district	Sept. 23, 1949	175r-1809	2, 276, 000	40	2	Aug. 1, 1958
Lindmore irrigation district	Feb. 28, 1949	175r-1635	5, 000, 000	40	2	Do.
Lindsay-Strathmore irrigation district	Sept. 12, 1950	175r-2447	2, 048, 038	40	1	Mar. 1, 1955
Saucelito irrigation district ⁴	Feb. 13, 1951	175r-2604	2, 644, 500	40	2	Aug. 1, 1965
Shafter-Wasco irrigation district	Feb. 11, 1955	14-06-200-4032	10, 250, 000	40	2	Aug. 1, 1964
Southern San Joaquin municipal utility district	May 14, 1948	175r-1434	9, 959, 484	40	3	Aug. 1, 1960
Stone Corral irrigation district	Dec. 13, 1950	175r-2555	777, 000	40	5	Aug. 1, 1965
Madera Canal: Madera irrigation district	May 14, 1951	175r-2891	8, 320, 000	40	2	July 1, 1958

¹ Date of original distribution system contract; some contracts have been amended subsequently. Maximum contract limit is that of the latest amendment in effect.

² Date of original distribution system repayment contract; subsequent amendments have been executed. "Maximum contract limit" is that of most recent contract amendment, and is for total of both agricultural and municipal.

³ Distribution system relates to both agricultural and municipal and miscellaneous use; the development period applies only to the repayment of the agricultural portion, for which the first payment is due Jan. 1, 1964.

⁴ Final decision not yet made by District, as to type, extent, and time of construction of distribution system; initial construction payment is present estimate.

Municipal and miscellaneous water-service contracts

District	Date of contract	Type of contract	Contract period	Initial delivery date	Maximum water rate	Quantities of water	
						Minimum (acre-feet)	Maximum (acre-feet)
Contra Costa Canal: Contra Costa County water district	Sept. 18, 1951	WS & D	40	Jan. 1, 1952	\$10. 00	25, 000	53, 000
Shasta Dam: Buckeye County water district	Dec. 18, 1951	WS	40	July 1, 1952	20. 00	45	175
Shasta Dam area public utility district	Aug. 12, 1948	WS	40	Oct. 15, 1948	20. 00	375	¹ 1, 000
Summit City public utility district	Oct. 22, 1948	WS	40	Dec. 15, 1948	20. 00	60	¹ 200
Sly Park unit: El Dorado irrigation district	June 15, 1953	WS	40	June 21, 1955	² 17. 50	625	2, 500
Friant-Kern Canal: City of Orange Cove	Feb. 28, 1956	WS	40	³ Mar. 1, 1956	10. 00	0	1, 400
Pacific Gas & Electric Co.	July 27, 1953	WS	40	Aug. 23, 1954	3. 50	0	⁴ 3, 000
Fresno County water district No. 18.	Aug. 17, 1956	WS	40	Oct. 23, 1956	20. 00	0	150
Folsom service area: Walter G. Ehrman	Feb. 28, 1956	WS	40	Feb. 28, 1956	(⁵)	(⁵)	(⁵)
Coffing and Stoltz	Jan. 2, 1957	WS	40	-----	(⁵)	(⁵)	(⁵)

Types of contract:

WS—Water service.
WS & D—Water service and distribution system.

¹ Theoretical maximum, computed from maximum contract rate of delivery; amended contract contains no maximum acre-foot figure.

² Rate of \$10 per acre-foot for fiscal year 1955 to 1957; \$15 per acre-foot for

fiscal year 1958 to 1960; and \$17.50 per acre-foot thereafter. In addition, the district operates and maintains the unit.

³ City started operating under long-term contract Mar. 1, 1956. Contract does not provide for initial delivery date.

⁴ Canal operational spill, no fixed entitlement.

⁵ Payment is \$300 per year minimum, or \$40 per residential unit, whichever is higher, no maximum or minimum quantities as such, flat-rate basis.

RECLAMATION REPAYMENTS

Payout study--Continued

SUMMARY

	<i>Cost allocation</i>	<i>Probable re payment</i>
Storage, conveyance, and power facilities:		
Reimbursable:		
Irrigation.....	\$384,605,000	\$279,160,300
Fish and wildlife.....	2,737,000	2,496,300
Municipal and industrial water service.....	17,419,000	^a 17,576,400
Power.....	292,037,000	^b 397,565,000
Subtotal.....	<u>696,798,000</u>	<u>696,798,000</u>
Nonreimbursable:		
Flood control, navigation.....	48,624,000	
Fish and wildlife.....	11,628,000	
Recreation.....	215,000	
Total.....	<u>757,265,000</u>	<u>696,798,000</u>
Interest on investment.....		^c 150,434,500
Earned surplus.....		<u>113,857,900</u>

^aIncludes \$157,400 aid toward irrigation repayment.

^bIncludes \$105,287,300 aid to irrigation and \$240,700 aid to fish and wildlife repayment.

^cIncludes \$128,877,900 on power investment and \$21,556,600 on municipal and industrial investment.

CHIEF JOSEPH DAM PROJECT

BRIDGEPORT, WASH.

Chief Joseph Dam, a key structure in the comprehensive irrigation development of the Columbia River Basin, was constructed by the Corps of Engineers, Department of the Army, on the Columbia River. Irrigation developments are to be constructed under the act of July 17, 1952 (66 Stat. 753), which provides a basis for authorization of irrigation works in connection with Chief Joseph Dam and for financial assistance to such developments from power revenues.

Facilities required to deliver water from the reservoir will be constructed for each division developed. The first irrigation development, Foster Creek Division, has been authorized and funds appropriated for its construction. Investigations are planned for three additional divisions, (1) Greater Wenatchee, (2) Okanogan-Similkameen, and (3) Methow, Chelan, Entiat, Nespelam and minor tributaries, development of which would provide a full water supply to 31,000 acres and a supplemental water supply to 23,000 acres.

FOSTER CREEK DIVISION

The Foster Creek division, which comprises Bridgeport Bar, Brewster Flat, and Bluebottle Flat units, was authorized by Congress on July 27, 1954 (68 Stat. 568), as Public Law 540, 83d Congress, 2d session. Congress on July 17, 1952 (66 Stat. 753), passed Public Law 577, 82d Congress, 2d session, providing the basis for authorizing irrigation works in connection with Chief Joseph Dam and for financial assistance to these developments from power development.

The Foster Creek division is located in Okanogan County adjacent to the Columbia River in north-eastern Washington midway between the Wenatchee and Okanogan fruit belts. The plan of development is to lift water from the Columbia River and supply it under pressure to sprinkler

irrigate 3,961 acres. The principal project features consist of pumping plants on the Columbia River, outlet works from Chief Joseph Dam, a relift pumping plant, steel-tank equalizing reservoirs, and a closed pipe distribution system.

The total estimated cost of the irrigation facilities of the Foster Creek division, including allocated costs from Chief Joseph Dam, is \$4,047,900. Following is a tabulation of the cost and repayment allocation:

Total estimated cost—on site.....	\$3, 915, 000
Allocated costs for outlet works, reservoir capacity, and substation, Chief Joseph Dam.....	132, 900
Total.....	4, 047, 900
Reimbursable costs allocated to irrigation:	
Repayment by irrigation water users....	\$1, 944, 300
Repayment by power revenues—on site costs.....	2, 086, 100
Total.....	4, 030, 400
Nonreimbursable costs—fish and wildlife....	17, 500
Total.....	4, 047, 900

Repayment contracts.—On June 6, 1956, the Brewster Flat irrigation district signed a contract to pay to the United States as its construction charge obligation \$1,276,800.

The repayment contract with the Bridgeport Bar irrigation district, dated May 21, 1956, provides for repayment to the United States its construction charge obligation of \$96,400. This obligation includes \$2,400 as the district's share of the cost of the Chief Joseph substation.

A contract for development of the townsite area, which is a part of the Bridgeport Bar unit, is under negotiation. A contract covering development of the Bluebottle Flat unit has not been negotiated.

PUBLIC NOTICES AND CONTRACTS

- 1956, June 6: Contract with Brewster Flat irrigation district to repay an amount not to exceed \$1,276,800 in 50 equal annual installments. If the district board of directors so elects, the amount of the basic annual installments may be adjusted in accordance with a formula, mutually acceptable to the Secretary and the District board of directors, that will reflect economic conditions pertinent to the water users payment capacity. A 10-year development period has been established for all lands. Annual construction installments shall be due on or before March 15 of the year following the last year of the development period.
- 1956, May 21: Contract with the Bridgeport Bar irrigation district to repay an amount not to exceed \$96,400 in 50 equal annual installments. Annual install-

ments shall become due the first calendar year following a 10-year development period and shall be payable on or before March 15 of the following year. If the board of directors of the district so elect, the basic annual installments may be varied in accordance with a formula, mutually acceptable to the Secretary and the district, that will reflect the project's economic conditions. The repayment of the district's obligation shall also be distributed among the various land classes to reflect their relative productivity.

The summary of status of repayment contracts:

Total value of contracted repayment.....	\$1, 373, 200
Total matured charges.....	0
Total matured charges repaid.....	0
Total matured charges unpaid.....	.0

COLLBRAN PROJECT

COLLBRAN, COLO.

The construction of the Collbran project in west-central Colorado was authorized by Congress July 3, 1952 (66 Stat. 325).

The project is designed to furnish an adequate irrigation water supply to approximately 20,600 acres of irrigable land and to have an installed capacity for the generation of 13,000 kilowatts of hydroelectric power. Of the total irrigable acreage, 2,300 acres would receive a full water supply and 18,300 acres would receive a supplemental water supply. Project features will include Vega Dam and Reservoir, South Side Canal, Bonham-Cottonwood pipeline, and the Upper and Lower Molina powerplants.

The total cost of constructing the project features is estimated to be \$14,190,000.

The authorizing legislation provides that net power revenues shall be applied to amortization of the costs allocated to irrigation which are beyond the ability of the irrigation water users to repay within a 50-year period. A contract will be negotiated with the Collbran conservancy district for the repayment of \$1,070,000, the portion of the irrigation allocation which is within the ability of the irrigation water users to repay.

The proposed allocation and repayment of costs:

Total estimated project cost.....	\$14,190,000
Reimbursable costs:	
Irrigation.....	4,162,000
Power.....	9,791,000
	<hr/>
Subtotal.....	13,953,000
	<hr/> <hr/>
Nonreimbursable costs:	
Fish and wildlife.....	100,000
Forest Service.....	33,000
Colorado River development funds....	104,000
	<hr/>
Subtotal.....	237,000
	<hr/> <hr/>
Repayment of reimbursable costs for irrigation investment:	
From irrigation water users.....	1,070,000
From net power revenues.....	3,092,000
	<hr/>
Subtotal.....	4,162,000
For powerplant investment: From power revenues.....	9,791,000
	<hr/>
Total reimbursable costs.....	13,953,000

COLORADO-BIG THOMPSON PROJECT

DENVER, COLO.

The Colorado-Big Thompson project in north-central Colorado, located on both sides of the Continental Divide, was found feasible by the Secretary and was approved by the President on December 21, 1937. The first appropriation of funds was made in the Interior Department Appropriation Act (50 Stat. 595) passed by Congress August 9, 1937, to initiate work on the project in accordance with the plan outlined in Senate Document No. 80, 75th Congress, 1st session.

The primary purpose of the Colorado-Big Thompson project is to supplement the water supply for an area currently estimated at 720,000 acres of irrigated land by diverting surplus water from the Colorado River on the western slope of the Continental Divide to the eastern slope through the Alva B. Adams tunnel. The power potential of the diverted water is utilized as it drops approximately 2,800 feet down the eastern slope of the Rocky Mountains between the Adams tunnel and the foothills storage system. Power is also produced from the waters stored for replacement purposes in Green Mountain Reservoir on the western slope.

The principal features of the project are as follows (the number of dikes is indicated in parentheses):

RESERVOIRS AND DAMS

Green Mountain Reservoir and Dam.
Lake Granby Dam and dikes (4).
Willow Creek Reservoir and Dam.
Shadow Mountain Lake and Dam and dike.
East Portal Reservoir and Dam.
Marys Lake and dikes (2).
Lake Estes and Olympus Dam.
Rattlesnake Reservoir and Dam.
Flatiron Reservoir and Dam.
Carter Lake and Dams (3)
Horsetooth Reservoir, dams (4), and dike.

CANALS, CONDUITS, AND TUNNELS

Elliott Creek feeder canal.
Colorado River improvements (for irrigation).

Willow Creek feeder canal.
Granby pump canal.
Alva B. Adams tunnel.
Aspen Creek siphon.
Rams Horn tunnel.
Prospect Mountain conduit (pressure).
Prospect Mountain tunnel (pressure).
Olympus siphon
Olympus and Pole Hill tunnels.
Pole Hill Canal.
Rattlesnake tunnel.
Bald Mountain tunnel (pressure).
Flatiron Canal.
Carter Lake conduit and tunnel (pressure).
St. Vrain supply canal.
Boulder Creek supply canal.
South Platte supply canal.
Horsetooth supply conduit (tunnel No. 1) and Big Thompson diversion structure.
Charles Hansen (Horsetooth) feeder canal.
Charles Hansen (Poudre supply) canal.
North Poudre supply canal and diversion dam.

PUMPING PLANTS

Granby pumping plant (600 e. f. s.—186 feet).
Willow Creek pumping plant (400 e. f. s.—175 feet).
Flatiron pumping plant (370 e. f. s.—240 feet).

POWERPLANT AND TRANSMISSION SYSTEM

Green Mountain powerplant (21,600 kilowatts).
Marys Lake powerplant (8,100 kilowatts).
Estes powerplant (45,000 kilowatts).
Pole Hill powerplant (33,250 kilowatts).
Flatiron powerplant (71,500 kilowatts).
Big Thompson powerplant (4,500 kilowatts).
789 circuit miles of transmission lines.
42 substations.

Construction of the project works has been completed with the exception of the Big Thompson powerplant, scheduled for completion in 1959. Hydroelectric power was initially generated at the Green Mountain powerplant in May 1943. Installed capacity of all Colorado-Big Thompson powerplants will total 183,950 kilowatts. Initial delivery of irrigation water was made to the

northern Colorado water conservancy district in 1947.

The United States operated and maintained all project works as completed until January 1, 1957. Deliveries of irrigation water were made from 1947 to 1950, inclusive, under contract I1r-1495 and from 1951 to 1956, inclusive, under contract I81r-1414, both mentioned hereinafter. Long-range operations began January 1, 1957, under the original 1938 contract, as amended. Under the long-range operation, the United States will operate and maintain all specific power facilities at no cost to the district. It will also operate and maintain the so-called joint works, the use of which are shared in the production of power and the collection, conservation, and transportation of irrigation water including, among other things, the terminal storage reservoirs on the eastern slope, the costs of which will be shared equally by the United States and the district. The supply canals leading from the terminal storage reservoirs will be operated and maintained by the district at no cost to the United States. Irrigation water will be delivered to the northern Colorado water conservancy district primarily at the outlet works of Carter Lake and Horsetooth Reservoirs (terminal storage reservoirs) and at the Big Thompson Spillway in the Charles Hansen feeder canal. The transportation and delivery of the water from these points to the district's allottees will be the responsibility of the district in collaboration with the Colorado State engineer and the private irrigation districts and canal companies.

Repayment and water service contracts.—The initial contract, dated July 5, 1938, between the United States and the northern Colorado water conservancy district provides for the repayment of \$25 million of project construction costs over a period of 40 years. This contract has been amended to increase the district's fixed construction obligation by \$1,031,000. It has also been amended to provide \$2,966,370 additional revenues from water rentals, during the period preceding the beginning of the repayment installments, for application against increases in the construction costs. The total fixed construction obligations of the district plus net revenues from water rentals amounts to \$28,997,370. The district will pay fixed annual water-rental charges through 1961 and fixed annual installments of its construction charge obligation for the ensuing 40 years.

The United States also has contracted with the town of Estes Park, whereby the town has agreed to pay \$1,125 per annum in perpetuity for power losses associated with water diverted to the town from the project supply. During the conservancy district's 40-year repayment period, this power-loss payment will total \$45,000.

CONTRACTS

- 1938, July 5: Contract I1r-1051 with the northern Colorado water conservancy district for construction of Colorado-Big Thompson project. The construction charge obligation of \$25 million is to be repaid in 40 consecutive annual installments, the first 20 of which shall be \$450,000 each; the next 10, \$500,000 each; and the last 10, \$1,100,000 each.
- 1939, November 6: Contract I2r-11555 between the United States and the town of Estes Park, Colo., provides for the use of 500 acre-feet of domestic water per annum by the town. The construction obligation, in two parts, is composed of \$40,000 to be paid to the United States in 40 equal annual installments for credit on the construction obligation of the northern Colorado water conservancy district, and \$1,705 payable in 40 installments for construction of the city's tap. The town will also pay to the United States annually and in perpetuity, for the right to divert 500 acre-feet annually to municipal use, \$125 as an operation and maintenance charge and \$1,125 for the loss in power production by the United States.
- 1947, January 14: Contract I1r-1495 with the northern Colorado water conservancy district providing for temporary deliveries at East Portal Reservoir to a district pipeline, at a rate of \$1.50 per acre-foot of water. This contract produced earnings totaling \$83,506.50 prior to January 1, 1951, and was terminated by the contract of December 15, 1950.
- 1950, July 14: Contract I1r-1051 with the northern Colorado water conservancy district amended the contract of July 5, 1938, by increasing the district's obligation to cover the increased cost of constructing the North Poudre supply canal system for gravity service in lieu of the pumping system originally planned. The district's construction obligation was increased by \$889,000 to a total of \$25,889,000; the increase to be paid in 40 installments of \$22,225 concurrently with the original obligation installments.
- 1950, December 15: Contract I81r-1414 with the northern Colorado water conservancy district amended the 1938 contract to the extent of modifying the rates and conditions under which irrigation water would be made available pending commencement of the construction repayment period. Water charges on a per acre-foot basis to be fixed annually by the Secretary of the Interior. Net revenues amounted to \$1,363,367 from January 1, 1951, to December 31, 1956, when contract was terminated by contract of September 10, 1956.

- 1953, April 8: Contract I81r-1414, amendment No. 1, with the northern Colorado water conservancy district modified the operating provisions of the contract of December 15, 1950.
- 1954, October 12: Contract I14-1051, Supplement No. 1, with the northern Colorado water conservancy district modified the contract of July 14, 1950, by increasing the construction obligation associated with the North Poudre supply canal as a gravity system in the amount of \$142,000. This increase is to be paid in 40 concurrent installments of \$3,550 each. It increased the total of the District's fixed construction obligation to \$26,031,000.
- 1956, September 10: Contract I1r-1051, Supplement No. 2, with the northern Colorado water conservancy district modifies the contracts of July 5, 1938, and December 15, 1950, as amended April 8, 1954, by establishing fixed, annual, water-rental payments in the years 1957 through 1961. The water-rental collections to be made under this contract total \$1,519,497. It provides for payment December 31, 1962, of the district's initial installment on its construction obligation contract and establishes arrangements for water management and project operation beginning January 1, 1957.

The schedule of water rentals and construction repayment, northern Colorado water conservancy district:

Water rentals:

1. Net revenues under contract I14-1495, January 1947 (1947-50, inclusive).....	\$83, 506
2. Net revenues under contract I8r-1414, December 1950 (1951-56, inclusive).....	1, 363, 367
3. Net <i>water-rental</i> payments to be made under contract I1r-1051, supplement No. 2, September 1956 (1957-61, inclusive).....	1, 519, 497

Subtotal—net revenues from <i>water rentals</i>	2, 966, 370
---	-------------

Construction obligation (contract I1r-1051 July 1938, amended July 1950, and supplement No. 1, October 1954):

Installments 1962 through 1981 at \$475,775 per year.....	9, 515, 500
Installments 1982 through 1991 at \$525,775 per year.....	5, 257, 750
Installments 1992 through 2001 at \$1,121,775 per year.....	11, 217, 750
Construction payments by town of Estes Park, 1955-94.....	¹ 40, 000

Subtotal district construction obligation.....	26, 031, 000
--	--------------

Total water rentals and construction repayment.....	28, 997, 370
---	--------------

¹ Credit to construction obligation of the northern Colorado water conservancy district at \$1,000 per annum for 40 years beginning Dec. 31, 1955.

City of Estes Park.....	\$1, 705
Total repayment.....	² 28, 999, 075

² Fixed by revenues actually collected and current contracts. This amount is \$31,925 less than amount estimated for previously prepared payout study herein.

The summary of status of repayment contracts:

Total value of contracted repayment.....	¹ \$26, 032, 705
Total matured charges.....	128
Total matured charges repaid.....	128
Total matured charges unpaid.....	0

¹ Represents construction obligation of northern Colorado water conservancy district and city of Estes Park.

The total estimated project construction cost is \$158,998,545. The allocation is \$100,661,583 of the cost to irrigation and \$58,336,962 to power, excluding interest during construction. The total estimated cost includes \$1,355,086 for construction of the Salida-Gunnison transmission line completed in 1953, which will eventually be transferred to the potential Fryingpan-Arkansas project. The project water users will repay \$26,032,705 over a period of 40 years beginning December 31, 1962. In addition, \$2,966,370 consisting of annual water-rental charges in excess of operation and maintenance costs will be applied against construction costs. Power revenues are scheduled to return \$130,817,583 of project costs including \$2,205,124 interest during construction. The power allocation of \$58,336,962 is reimbursable with interest.

The Colorado-Big Thompson power system is linked through a transmission grid with the North Platte, Riverton, Kendrick, Shoshone, and Missouri River Basin projects in Wyoming. Project surplus energy is marketed by the Missouri River Basin project transmission system. A transmission tie to a Pacific Power & Light Co. line at Lovell, Wyo., in December 1956, links the system to the Northwest Power Pool.

The cost and repayment allocations:

Total estimated project cost.....	\$158, 998, 545
Interest during construction.....	2, 205, 124
Total.....	161, 203, 669
Less chargeable to proposed Fryingpan-Arkansas project.....	1, 355, 086
Total.....	159, 848, 583
Allocation of reimbursable costs:	
Irrigation.....	100, 661, 583

Water rentals.....	3, 000, 000
Subtotal.....	29, 031, 000
From other projects.....	1, 355, 086
Total probable repayment.....	161, 203, 669

Advance collections were received from the

northern Colorado water conservancy district and applied to water used as shown in the table below. Of the collections, 10% or \$228,277, was set aside in a prepayment account, to be applied as offset against the district's share of cost of operation and maintenance of joint works during the second period of operation, which began January 1, 1957. Fifty percent of the cost of operation and maintenance of joint works is allocated to the district. These consist of all facilities except strictly irrigation facilities, which were operated by the district, and power facilities operated by the United States. Water rental accruals and collections prior to operation of the interim contract were \$83,506.

Operation and maintenance collections

Fiscal year	Net collections ¹	Total operation and maintenance costs	Allocation to irrigation	Allocated to electric operations	Excess of revenues over irrigation allocation	Net revenues, cumulative

COLORADO RIVER PROJECT

AUSTIN, TEX.

Construction of Marshall Ford Dam in Travis County near Austin, Tex., by the Bureau of Reclamation was authorized by the Rivers and Harbors Act of August 26, 1937 (50 Stat. 850). Primarily a flood-control project, the dam and reservoir serve also to improve navigation, regulate stream flow, and provide water for storage for irrigation uses and power generation. The completed project cost to June 30, 1956, was \$23,963,881. The Bureau's construction program is completed.

The dam and reservoir are operated by the Lower Colorado River Authority of Texas in accordance with a contract between the authority and the United States dated March 13, 1941. A powerplant has been constructed by the authority at the dam, renamed Mansfield Dam, and they operate and maintain the powerplant and market all energy produced.

Repayment contracts.—A determination has been made that \$5,510,500 is the portion of the construction cost to be reimbursed to the United States. The reimbursement will be accomplished under the terms of contract H-1262 dated December 9, 1948, between the United States and the Lower Colorado River Authority. Repayment will be made in 35 equal annual installments of \$157,443, with the first installment to be paid on June 1, 1985.

The cost and repayment allocations:

Total project cost:	
Marshall Ford Dam and Reservoir	\$23, 439, 644
Investigations for Hamilton, Marble Falls, Arnold, and Austin Dams	524, 237
Total	<u>23, 963, 881</u>
Allocation of costs:	
Reimbursable costs:	
Power	5, 510, 500
Contribution toward investigation of Hamilton Dam	9, 581
Nonreimbursable costs:	
Power	4, 956, 542
Flood control (includes improvement of navigation and stream regulation)	12, 972, 602
Investigations for Hamilton, Marble Falls, Arnold, and Austin Dams	514, 656
Total	<u>23, 963, 881</u>

The allocation of Marshall Ford Dam and Reservoir costs are determined as follows: The Secretary, pursuant to article 11 of a contract dated March 13, 1941, between the United States and the Lower Colorado River Authority, issued a "Report on Allocation of Construction Costs, Marshall Ford Dam" dated September 1948 in which \$12,888,636 was allocated to improvement of navigation, flood control, and stream regulations and \$10,399,267 to generation of power. The total estimated cost of Marshall Ford Dam was \$23,287,903 in 1948, and the completed cost is \$23,439,644. Allocations have been increased in the same proportions as those determined in the 1948 report to conform with the finally determined cost.

COLORADO RIVER FRONT WORK AND LEVEE SYSTEM

ARIZONA-CALIFORNIA-NEVADA

The Colorado River front work and levee system was authorized by the acts of March 3, 1925 (43 Stat. 1186, 1198); January 21, 1927 (44 Stat. 1010, 1021); July 1, 1940 (54 Stat. 708); and particularly the act of June 28, 1946 (60 Stat. 338). The act of March 3, 1925, had as its objective the reimbursement of the Reclamation fund for the cost of operation and maintenance of levees in the vicinity of Yuma theretofore incurred, and the payment thereafter of operation and maintenance costs not to exceed a specified amount annually. Subsequent acts increased the authorization and extended the application of the act to include the Colorado River between Yuma, Ariz., and Lees Ferry, Ariz. The act of June 28, 1946 (60 Stat. 338), authorizes appropriations to defray the cost of (a) operating and maintaining the Colorado River front work and levee system in Arizona, California, and Nevada; (b) constructing, improving, extending, operating, and maintaining the protection and drainage works and systems along the Colorado River; (c) controlling said river and improving, modifying, straightening, and rectifying the channel thereof; and (d) conducting investigations and studies in connection therewith.

The work consists of a long-range program of corrective measures designed to conserve the waters of the Colorado River, control the movement of sediment, protect communities, protect transportation facilities, and protect agricultural land by controlling the bed and banks of the river. Channel alinement rectification, channel control structures, channel levees, channel revetment, and flood-control levees are used to confine

the river to the designed channel during variations of discharge.

The major project works include about 43 miles of flood-control levees along the Colorado River upstream and downstream from Yuma, Ariz.; channelization of about 12 miles of the river, with structures and channel levee, between Needles, Calif., and Topock, Ariz. (headwaters of Havasu Lake), and channelization of about 8 miles of the river, with partially completed structures, upstream from Needles in the Big Bend to Needles Reach; the Palo Verde temporary rock weir across the river about 12 miles upstream from Blythe, Calif. (which will be removed upon completion of the Palo Verde diversion dam); sedimentation survey of Lake Mead; and a continuing program of the collection of data concerning river degradation and aggradation, sediment removed and deposited by the river, and data relating to the hydraulic characteristics of the river.

The major work in progress is the continuation of the channelization program in the 23-mile Big Bend to Needles Reach; studies of the Palo Verde diversion dam to Imperial Dam Reach; studies of the Imperial Dam to the southern boundary of the United States reach; and acquisition of a floating 12-inch cutter-type hydraulic suction maintenance dredge.

All project works are maintained by Government forces supplemented by contract work where feasible.

The total actual cost through June 30, 1957, of operating and maintaining the Colorado River front work and levee system was \$8,150,344. The completed construction program cost a total

of \$9,692,687, including costs transferred from the Yuma project pursuant to the act of Congress, September 2, 1950. Also included in the above construction cost is a program of levee rehabilitation and reconstruction which was completed in the vicinity of Yuma at a cost of \$2,536,711.

Expenditures under the act of June 28, 1946,

and preceding acts are nonreimbursable. However, the cost of the portion of the flood-control levees constructed in the Yuma area, which were required by reason of the construction of Morelos Dam, has been paid for in part by the Mexican Government with the settlement of the final amount still pending.

COLORADO RIVER STORAGE PROJECT

COLORADO-NEW MEXICO-UTAH-WYOMING-ARIZONA

Project authorization

The Colorado River storage project, consisting initially of four storage units and 11 participating projects, was authorized on April 11, 1956 (70 Stat. 105).

The storage units include the Glen Canyon, Flaming Gorge, Navajo Dam, and the Curecanti Dams. Construction of the Curecanti unit is subject to a finding of feasibility by the Secretary of the Interior. The storage units will perform two major and essential functions. They will regulate streamflow so that water commitments to the lower Colorado River Basin can be met in dry periods without curtailment of the development of water uses allotted the upper basin. Also, they will produce much-needed hydroelectric energy. Power revenues in excess of costs of the storage units will be available for assistance in the repayment of costs of participating projects; namely, the costs that are beyond the payment capacity of the irrigation water users. Transmission of power to load centers will be a cooperative effort of existing public and private utilities in the area and the Bureau of Reclamation.

Participating projects are Reclamation projects consuming water allotted the upper Colorado River Basin and requiring storage replacement and revenue assistance from the storage project in the repayment of irrigation costs. The authorized participating projects include the previously authorized Paonia project, and the central Utah (initial phase), Emery County, Florida, Hammond, La Barge, Lyman, Pine River extension, Seedskadee, Silt, and Smith Fork projects. Together they will provide water for 132,000 acres of full service land and 234,000 acres of supplemental service land. Repayment of the Eden project in Wyoming (now largely constructed) would be completed by the Colorado River

storage project. As provided by the Eden Authorizing Act of June 28, 1949 (63 Stat. 277), \$1,500,000 of the project's costs would be paid by the irrigators and the remainder would be repaid by the Colorado River storage project.

Information on units of the storage project and the participating projects is summarized below. Modifications in some of the plans may result from the definite plan studies that will precede construction.

Colorado River storage project

The various dams and reservoirs of the Colorado River storage project will regulate the flow of the river, thus permitting an expansion of irrigation and other water use in the upper basin within the limits of the Colorado River Compact. In most instances powerplants and switchyards will be installed at the dams, and transmission lines will be provided to transmit the power to load centers. Facilities will be provided as appropriate for recreation and to mitigate losses of, and improve conditions for, the propagation of fish and wildlife. Minor flood control and other benefits, largely unevaluated at present, are anticipated from the storage project.

The Colorado River storage project as outlined in the 1950 report included 10 storage units. Four of these were authorized for construction by the act of April 11, 1956 (70 Stat. 105). It is anticipated that additional units will be authorized as they become needed. The four authorized units are the Glen Canyon, Flaming Gorge, Navajo, and Curecanti. Together they will provide 34,670,000 acre-feet of reservoir capacity and about 1,167,000 kilowatts of installed generating capacity. More than three-fourths of both capacities will be provided by the Glen Canyon unit alone.

Glen Canyon unit.—Glen Canyon Dam will be on the Colorado River in northern Arizona, about

13 miles downstream from the Utah-Arizona State line and 16 miles upstream from Lee Ferry. It is the only one of the authorized dams that will be on the Colorado River proper.

Glen Canyon Dam will be a gravity arch concrete structure that will rise 700 feet above its foundation and 573 feet above the river. It will have a crest length of 1,500 feet. The dam will be the fourth highest in the world and second in height only to Hoover Dam in the United States. The reservoir will have a capacity of 28,040,000 acre-feet. When full, it will cover about 163,000 acres and will extend 186 miles up the Colorado River, nearly to the mouth of Green River, and 71 miles upstream on the tributary San Juan River. About 6,535,000 acre-feet of the reservoir capacity will be inactive and will be useful for sediment accumulation, to protect fish, and to provide the power head at the dam. A powerplant and switchyard will be constructed at the dam. The powerplant will include eight generating units with a total installed capacity of 900,000 kilowatts. An access road and a bridge across the canyon about 900 feet downstream from the dam site will be constructed to Federal highway standards.

Measures will be taken to protect the Rainbow Bridge National Monument at one of the side bays of the Glen Canyon Reservoir.

Flaming Gorge unit.—Flaming Gorge Dam will be on the Green River, a major tributary of the Colorado, in northeastern Utah about 6 miles south and 20 miles west of the corner common to Utah, Wyoming, and Colorado. The dam will be a concrete thin arch structure rising about 495 feet above its foundation and about 445 feet above the river. It will have a crest length of 1,270 feet. The reservoir will have a total capacity of about 3,930,000 acre-feet and an area of about 42,000 acres. It will extend upstream 93 miles, nearly to the town of Green River, Wyo. About 330,000 acre-feet of the reservoir capacity will be inactive. The powerplant at the dam will consist of 3 generating units with a total installed capacity of 108,000 kilowatts. A switchyard will be constructed nearby.

Navajo unit.—Navajo Dam will be constructed on the San Juan River in New Mexico, about 34 miles east of Farmington. The dam will be an earthfill structure about 385 feet high above the river and nearly 3,800 feet long at the crest. It will create the Navajo Reservoir with a total

capacity of 1,700,000 acre-feet, of which about 672,000 acre-feet will be inactive. The reservoir when full will inundate 15,300 acres and will extend approximately 34 miles up the San Juan River. Although the outlet works are such that a powerplant could be installed at a later date, no powerplant is included in the present plan. Recreational facilities will be provided at the reservoir.

The Navajo project (Indian irrigation), when authorized and constructed will obtain its water from the Navajo Reservoir. The reservoir will also provide water, directly or indirectly, for other potential projects in New Mexico.

Curecanti unit.—The Curecanti unit will develop storage and power possibilities along part or all of a 40-mile stretch of a deep canyon section of the Gunnison River above the Black Canyon of the Gunnison National Monument and below the town of Gunnison, Colo. In order to prevent the inundation of land near the town, the authorizing legislation provides that “* * * the Curecanti Dam (now called Blue Mesa Dam) shall be constructed to a height which will impound not less than 940,000 acre-feet of water or will create a reservoir of such greater capacity as can be obtained by a high waterline located at 7,520 feet above mean sea level. * * *” The act also requires that construction shall not be undertaken until further engineering and economic investigations have been made and until the Secretary of the Interior has certified to the Congress and the President that in his judgment the benefits of the unit will exceed its costs.

Bureau of Reclamation reconnaissance studies indicate that a favorable plan, consistent with the authorizing act, would include a series of four dams, reservoirs, powerplants, and switchyards. The developments, in order moving downstream, would be known as the Blue Mesa, Narrow Gauge, Morrow Point, and Crystal. Collectively the reservoirs would have a capacity of about one million acre-feet. The powerplants, with an installed generating capacity of about 159,000 kilowatts, would develop a maximum of about 940 feet of static power head.

The Blue Mesa Dam, located 30 miles downstream from Gunnison, would be the largest of the series in the Curecanti unit. It would be an earthfill structure about 350 feet high above its foundation and about 820 feet long at its crest. The reservoir would have a capacity of about

940,000 acre-feet at a high-water elevation of 7,520 feet. About 200,000 acre-feet of the reservoir capacity would be inactive. The active capacity would provide the principal seasonal river regulation for the unit powerplants. Recreational facilities would be provided at the reservoir.

Investigation and planning of the Curecanti unit are continuing in more detailed scope as required by the authorizing act.

Transmission division.—The authorizing act of April 11, 1956 (70 Stat. 105), provides that project powerplants and transmission facilities shall be operated in conjunction with other Federal powerplants, present and potential, so as to produce the greatest practicable amount of power and energy that can be sold at firm power and energy rates. To carry out the provisions of the law, a high-voltage transmission grid will be constructed to interconnect the plants of the authorized units of the storage project and to effect interconnection with other existing Federal powerplants and utility systems in the area.

The Transmission division includes the high-voltage lines from storage unit switchyards to substations at major load centers and points of interconnection and the substations at those points. Facilities of the Transmission division will be extended as necessary to provide interconnections with future units of the storage project and with other Federal plants and to provide for interconnection of future participating project transmission lines with the high-voltage grid. The extent and location of the high-voltage transmission grid will depend on the market area requirements for project power, the desires of power users to purchase project power, points of interconnection with other systems, and the final allotments of power to various users.

Participating projects

Participating projects are those which will consume water of the Upper Colorado River system for irrigation and other purposes and which will require assistance from power revenues of the storage project in the repayment of irrigation costs. An initial group of 11 participating projects was authorized by the act of April 11, 1956 (70 Stat. 105). These include the Paonia, Smith Fork, Florida, and Silt projects in Colorado; the

Pine River Extension project in Colorado and New Mexico, the Hammond project in New Mexico; the Central Utah (initial phase) and Emery County projects in Utah; and the Seedskaadee, La Barge, and Lyman projects in Wyoming. The projects combined will provide water for a total of about 365,100 acres, including about 132,800 acres of full service land and about 232,300 acres of supplemental service land.

Paonia project.—The Paonia project on the North Fork of the Gunnison River in west-central Colorado was partially constructed under the authorizing act of June 25, 1947 (61 Stat. 181). It was reauthorized by the act of April 11, 1956 (70 Stat. 105), and the entire development was linked with the basin fund as a participating project. The project will provide water to 2,200 acres of full service land and 13,100 acres of supplemental service land. It will provide incidental benefits to fish and wildlife, recreation, and flood control.

The Fire Mountain Canal was enlarged and partially extended under the initial authorization. Work yet to be accomplished under the 1956 reauthorization includes construction of the Paonia Reservoir on Muddy Creek to a capacity of 21,000 acre-feet, further extension of the Fire Mountain Canal and rehabilitation of critical sections of the previously enlarged canal.

Pine River project extension.—An extension will be constructed to the existing Pine River project, located in southwestern Colorado and northwestern New Mexico about 20 miles east of Durango, Colo. The extension will provide irrigation water for about 15,200 acres of full service land, of which about 1,940 acres are within the Pine River Indian irrigation project. The extension will involve enlargement and extension of eight major canals and ditches diverting from Pine River, a new diversion dam, and several small distribution laterals.

Smith Fork project.—The Smith Fork project will be constructed in west-central Colorado along the Smith Fork of Gunnison River near Crawford. It will provide water for about 2,300 acres of full service land and 8,200 acres of supplemental service land. Recreational opportunities also will be provided. Construction features will include the Crawford Reservoir with 14,000 acre-feet of capacity, a diversion dam, feeder canals, and laterals.

Florida project.—The Florida project will be constructed in southwestern Colorado on the

Florida River. Construction features will include the Lemon Reservoir with a capacity of about 23,000 acre-feet, a diversion dam, and distribution and drainage systems. An existing canal also will be enlarged. The works will provide a full supply of water for about 6,300 acres of land and a supplemental supply for about 12,700 acres. Operation of the project also will provide flood control and some enhancement of fish and wildlife values in the area.

Silt project.—The Silt project will provide water for about 1,900 acres of full service land and 5,400 acres of supplemental service land between Rifle and Elk Creeks in west-central Colorado. The project also will enhance fish and wildlife values in the area. Construction features will include the Rifle Gap Reservoir of 10,000 acre-foot capacity, a pumping plant, diversion dam and feeder canal, and laterals and drains. Some existing works will be rehabilitated.

Hammond project.—The Hammond project in northwestern New Mexico will divert San Juan River water for irrigation of about 4,000 acres of full service land along the river in the vicinity of Farmington and Bloomfield. Principal features of the development will be a diversion dam, distribution canal, pumping plant, and lateral and drainage systems.

Central Utah project (initial phase).—The Central Utah project (initial phase) will be an extensive undertaking to develop water resources of the Uinta Basin, a segment of the Colorado River Basin in northeastern Utah. Part of the developed water will be conveyed westward for use in the Bonneville Basin in Central Utah and the remainder will be used in the Uinta Basin. Reservoirs with a total capacity of about 1,663,000 acre-feet will make water available to about 28,600 acres of full service land and about 131,800 acres of supplemental service land. Four project powerplants will have a combined installed capacity of 61,000 kilowatts. Approximately 48,800 acre-feet of water will be provided annually for municipal, industrial, and miscellaneous uses. The project will provide recreational benefits and will have value in flood and sediment control.

The potential Strawberry aqueduct will intercept flows of Rock Creek and streams west of Rock Creek. It will convey the water to the existing Strawberry Reservoir on Strawberry River which will be enlarged through construction of Soldier Creek Dam downstream from the

present dam. The existing outlet tunnel from the reservoir will be enlarged. This tunnel conveys water westward through the Wasatch Mountain divide to the Bonneville Basin. In descending the west slope of the Wasatch Mountains, the water will pass through a series of four powerplants. In the Bonneville Basin the water will be used in an area extending from Salt Lake City south 80 miles to Nephi. Part of the use will be effected by exchanges involving the waters of Utah Lake, Provo River, and other streams. These exchanges will require construction of Bates Dam on Provo River, Hobble Creek Dam on Little Hobble Creek, and the Front Dam near Salt Lake City. Transmission lines will be constructed to serve local market areas and to interconnect with the main grid transmission system.

New project works to provide water for replacement and expanded irrigation and municipal use in the Uinta Basin will include Hanna Reservoir on the North Fork of the Duchesne River, Starvation Reservoir on Strawberry River with a feeder canal from the Duchesne River, the Upalco Reservoir offstream from Lake Fork River, the Stanaker Reservoir with feeder canal from Ashley Creek and a service canal (Vernal unit), and Tyzack Reservoir on Brush Creek.

Emery County project.—The Emery County project will be in the headwaters of the San Rafael River in east-central Utah. It will provide irrigation water for about 3,600 acres of full service land and 20,500 acres of supplemental service land and will provide for recreational opportunities. Joes Valley Reservoir with a total capacity of 57,000 acre-feet, a diversion dam, canal, laterals, and drains will be the principal features of the project.

Seedskadee project.—The Seedskadee project will be constructed in southwestern Wyoming along the Green River below the authorized La Barge project. Principal works under the present tentative plan include a diversion dam on the river, conveyance canals, pumps, and distribution laterals. Such works will provide an irrigation water supply for about 60,700 acres of full service land.

Modifications of the plan to provide storage, power, and fish and wildlife facilities are being investigated. As the studies are still incomplete, however, the modifications are not included in the project data used in this report.

Lyman project.—The Lyman project will be constructed in southwestern Wyoming along Blacks Fork of the Green River near the Wyoming-Utah boundary. It will supplement the irrigation water supply for about 40,600 acres of land. Bridger Reservoir will be constructed on Willow Creek to a capacity of 43,000 acre-feet. Other features will include feeder canals to the reservoir, return canals to distribute the reservoir releases,

improvement of the Willow Creek Channel, drainage, and improvement of the existing irrigation system.

La Barge project.—The La Barge project will divert water directly from the Green River in southwestern Wyoming to provide irrigation water for about 8,000 acres of full service land. Project works will include a diversion dam, conveyance canal, distribution laterals, and drains.

Summary of irrigation and power data—Colorado River storage project and participating projects

Units and projects	Irrigable area (acres)			Total reservoir storage capacity (acre-feet)	Installed powerplant capacity (kilowatts)	Average annual water supply (acre-feet)	
	Full service land	Supplemental service land	Total			Increase in usable irrigation supply	Increase in stream depletion
Storage units:

Total.....	992, 174	1, 307	2, 779	1, 104	987, 033	7, 729

¹ Based on January 1957 price level except that bid prices were used where available and actual costs of past investigations and construction were used.

² Operation and maintenance costs are based on 1954-56 price levels. Replacement costs are based on current construction cost estimates and are figured on a sinking-fund basis at 2½ percent interest over 100-year period.

³ Includes contribution of \$1,635,000 from State of Arizona and \$600,000 from Bureau of Public Roads for improvement of Glen Canyon bridge and access road to meet Federal highway standards.

⁴ Includes \$60,000 contributed by city of Los Angeles for investigation of Glen Canyon damsite.

⁵ Includes \$207,000 to be expended by the National Park Service for recreational facilities at Navajo unit.

⁶ Includes \$452,000 to be expended by the National Park Service for recreational facilities at Curecanti unit.

⁷ Includes \$62,000 contributed by the State of Utah and private groups.

⁸ Includes \$1,000 contributed by the State of Utah.

Summary of cost allocations and repayment—Colorado River storage project and participating projects

[Unit—\$1,000]

Surplus revenues accumulated to end of 85th year of operation (year 2046).....	775, 528		

COLUMBIA BASIN PROJECT

EPHRATA, WASH.

The Columbia Basin project was begun with the allocation of NIRA funds pursuant to title II of the act of June 16, 1933. The project was specifically authorized by the Rivers and Harbors Act approved August 30, 1935 (49 Stat. 1028). The Columbia Basin Project Act of March 10, 1943 (57 Stat. 14), reauthorized the project, bringing it under the provisions of the Reclamation Project Act of 1939 (53 Stat. 1187).

Primary purposes of the project are (1) irrigation, (2) power generation, (3) river regulation, and (4) flood control and navigation, with additional secondary benefits in recreational development. Irrigation of 1,029,000 acres is planned ultimately. Water is being provided the initial 600,000 acres under a 10-year program, 1952-61, inclusive. Generators are installed with a combined nameplate capacity of 1,974,000 kilowatts.

Major project features include the Grand Coulee Dam; Franklin D. Roosevelt Lake, 151-mile reservoir behind the dam; Grand Coulee pumping plant and powerhouses; Grand Coulee Equalizing Reservoir, 27-mile storage reservoir; four earth-fill dams; and a number of major and minor canals, laterals, tunnels, and siphons.

At present all features are operated by the Bureau of Reclamation pending further development of the project.

The output of the Grand Coulee powerplant in excess of project requirements is marketed by the Bonneville Power Administration.

Repayment contracts.—Repayment contracts have been negotiated with the three irrigation districts. In addition, a number of individual contracts have been negotiated between the Government and the owners of part-time units for repayment of construction costs for the special irrigation systems to serve these units.

CONTRACTS

1945, October 9: Contract No. Ilr-1444 with South Columbia Basin irrigation district for repayment of construction cost of irrigation system for lands in the district up to a maximum of \$33,700,000. Repayment in 40 years following 10-year development period upon making first water available.

1945, October 9: Contract No. Ilr-1442 with East Columbia Basin irrigation district for repayment of construction cost of irrigation system for lands in the district up to a maximum of \$37,800,000. Repayment in 40 years following 10-year development period upon making first water available.

1945, October 9: Contract No. Ilr-1443 with Quincy-Columbia Basin irrigation district for repayment of construction cost of irrigation system for lands in the district up to a maximum of \$24,900,000. Repayment in 40 years following 10-year development period upon making first water available.

Various dates: 56 contracts negotiated with owners of part-time farm units in irrigation block No. 2 for repayment of special construction costs to a total of \$26,168. Repayment in 10 years from date of contract.

Various dates: 33 contracts negotiated with owners of part-time farm units in irrigation block No. 701 for repayment of special construction costs totaling \$17,063. Repayment in 10 years from date of contract.

Various dates: 51 contracts negotiated with owners of part-time farm units in irrigation block No. 41 for repayment of special construction costs totaling \$39,490. Repayment in 10 years from date of contract.

The summary of status of repayment contracts:

	Irrigation districts	Part-time farm unit owners	Totals
Total value of contracted repayment..	\$87,465,000	\$82,721	\$87,547,721
Total matured charges.....	0	68,230	68,230
Total matured charges repaid.....	0	68,000	68,000
Total matured charges unpaid.....	0	230	230

The total estimated cost of the project is \$756,055,000. In a report by the Bureau of Reclamation and the Bonneville Power Admin-

istration (H. Doc. No. 172, 79th Cong., 1st sess.), the cost of construction has been allocated among the several purposes of the project and the part of the Government's investment that is to be returned from various revenue-yielding sources.

The allocations of costs are as follows:

Reimbursable costs:	
Irrigation.....	\$561,236,700
Power.....	192,304,860
Special distribution systems.....	1,000,000
Subtotal.....	<u>754,541,560</u>
Nonreimbursable costs:	
Navigation and flood control.....	1,000,000
Spillway lighting, Grand Coulee Dam.....	200,000
Contributions:	
State of Washington.....	313,440
Total.....	<u>756,055,000</u>

It has been determined tentatively that the irrigation district water users will pay directly approximately \$87,465,000, or an average of \$85 per irrigable acre in construction charges. Other sources and amounts scheduled for repayment are included in the following:

The repayment of reimbursable costs:

Power revenues:	
Electric plant investment.....	\$192,304,860
Irrigation plant investment.....	473,771,700
Subtotal.....	<u>666,076,560</u>
Irrigation water users.....	87,465,000
Irrigation water users (part-time farm units).....	1,000,000
Total.....	<u>754,541,560</u>

RECLAMATION REPAYMENTS

Payout study

Fiscal year	Repayment components of net power revenues				Power				Interest free			Irrigation		Recapitulation	
	Net operating revenues	Interest	Excess over interest (principal)	Investment repayment from power revenues, plant in service at end of year	Interest bearing		Interest free		Construc-tion repay-ment by irrigation users	Investment repayment		Net project revenues	Earned surplus cumulative		
					Plant allo-cated to commercial electric	Balance to be repaid	Plant allocated to river regulation	Aid to irrigation plant		Plant in service—allocated to irriga-tion at end of year to be repaid by water users	Interest-free balance to be paid

CRESCENT LAKE DAM PROJECT

BEND, OREG.

Reconstruction of Crescent Lake Dam and appurtenant outlet works to Crescent Lake, in Deschutes County, Oreg., was authorized by the 1955 Interior Department Appropriation Act (68 Stat. 361) on July 1, 1954.

The project works to be replaced under this program consist of a dam and appurtenant works with intake openings screened for protection of fish. These works will provide the project with a reservoir storage capacity of 86,000 acre-feet which, when added to other existing water supplies, will insure a dependable total supply to about 6,650 irrigable acres in the Deschutes County municipal improvement district, which was originally organized as a State project under the Carey Act in 1902.

The total construction cost of the work is estimated at \$297,000. Costs of previous surveys and investigations in the amount of \$23,000 increases the total reimbursable cost allocated to irrigation to \$320,000, and is established as the district's construction charge obligation.

The United States will operate Crescent Lake Dam during the construction period. On com-

pletion of construction, the district will operate and maintain the entire project works.

CONTRACT

1954, September 20: Contract 14-06-100-566 with the Deschutes County municipal improvement district to pay to the United States the actual cost of reconstruction in an amount not to exceed \$320,000.

Payout schedule.—The district is to repay its construction charge obligation in 40 equal annual installments, the first payment being due on December 31, 1957, or December 31 of the first full calendar year following the year in which the Secretary provides a notice. However, should the district so desire, the annual installments may be paid in two equal amounts, one to be paid on or before December 31 of the year in which the payment accrues, and one to be paid on June 30 of the following year.

The summary of status of repayment contract:

DALTON GARDENS PROJECT

COEUR D'ALENE, IDAHO

Rehabilitation of project works on the Dalton Gardens project in Kootenai County, Idaho, was authorized on July 31, 1953, by the Interior Department Appropriations Act (67 Stat. 261, 266).

The rehabilitation program will provide the project with an adequate water supply at sufficient pressure for sprinkler irrigation of 944 acres, comprised principally of part-time farm and suburban residence units.

The project features include two centrifugal pumps having a capacity of 3,000 gallons per minute, 800 feet of steel intake pipe, a steel storage tank with 150,000-gallon capacity, approximately 2,950 feet of steel supply lines, and a distribution system of about 11 miles of steel pipe.

Costs of rehabilitating the project works through June 30, 1957, equaled \$258,660, against the estimated total of \$270,200, all of which is allocated to irrigation and is reimbursable.

The Dalton Gardens irrigation district operates the project works.

Repayment contract.—The Dalton Gardens irri-

gation district signed a repayment contract dated April 26, 1954, to pay to the United States the actual cost of the repair and rehabilitation of their project works in an amount not to exceed \$270,200. This amount includes \$2,200 for actual costs of past surveys and investigations, and is established as a part of the district's construction charge obligation.

A 2-year development period has been established, starting January 1, 1956. The first annual construction installment is due on or before December 31, 1958.

CONTRACT

1954, April 26: Contract 14-06-100-417 with the Dalton Gardens irrigation district to repay \$270,200, the estimated cost of rehabilitating project facilities, in 40 equal annual installments or, at the district's option, in 80 equal semiannual installments.

DESCHUTES PROJECT—North Unit

BEND, OREG.

A finding of feasibility for the Deschutes project was signed by the Secretary of the Interior on September 24, 1937, and approved by the President on November 1, 1937, under provisions of the Fact Finders' Act of December 5, 1924 (43 Stat. 672, 701). Construction of Haystack Dam and equalizing reservoir was authorized by act of Congress on August 10, 1954 (68 Stat. 679).

The primary purpose of the project is to provide storage and distribution facilities for 50,000 acres of new land in the North unit in Jefferson County and to furnish supplemental water to about 52,000 acres in established irrigation districts. Principal features include the Wickiup Dam and Reservoir in Deschutes County, North Unit Main Canal, and lateral system, and one additional unit to the Pacific Power & Light Co.'s Cove power plant to provide replacement power for that lost in its Bend powerplant during the storage season as a result of storage of winter flows in Wickiup and Crane Prairie Reservoirs. In connection with the construction of the project, it was necessary to reconstruct the Crane Prairie Reservoir in Deschutes County.

The total estimated cost, including \$151,786 for funded charges, is \$14,288,000. The entire amount is reimbursable except for value of work performed by the Civilian Conservation Corps, Civilian Public Service, and Selective Service System. This work amounts to \$1,617,758.¹

Construction of the North unit of the Deschutes project will be finished upon completion of Haystack Equalizing Reservoir.

North unit facilities have been operated and maintained by the North unit irrigation district since January 1, 1955.

¹ The Acting Attorney General's decision of September 7, 1937, holds that a Federal Reclamation project may be constructed partly by the use of money from the Reclamation fund and partly with nonreimbursable funds from other sources.

Repayment contracts.—An amendatory contract approved by act of August 10, 1954 (68 Stat. 679), has been entered into with the North unit irrigation district to pay the reimbursable construction costs of the North unit up to \$12,130,000. Repayment is scheduled over a 78-year period.

The Central Oregon irrigation district has agreed to pay \$400,000 in 78 semi-annual installments, or approximately \$10 per irrigable acre for the reconstruction of Crane Prairie Reservoir.

The Arnold project and Crook County Improvement District No. 1 are obligated by interdistrict agreement to repay Central Oregon irrigation district for apportioned parts of Crane Prairie Reservoir reconstruction costs.

The Pacific Power & Light Co. has agreed to pay \$67,938 for work performed by the Bureau in improving its facilities. Payments began in 1942 and will be completed in 1985. County of Jefferson is obligated to repay \$123,667 for the county's share of the cost of construction of road crossings. Payments began in 1952 and will be completed in 1982. The city of Prineville has completed payment of \$10,679 for a concrete siphon built by the Bureau.

The city of Culver made a lump sum payment of \$876. The city of Madras will repay \$24,000 in 40 annual installments. Payments began in 1955 and will be completed in 1994.

Repayment of Haystack Equalizing Reservoir began in fiscal year 1957 and will be completed in about 78 years.

CONTRACTS

1938, January 4: Contract with North unit irrigation district (formerly Jefferson Water conservancy district) for construction of North unit of project at estimated cost of \$8,000,000, payable in 78 equal semiannual installments. Secretary may provide for smaller payments during early years and larger installments in later years.

1939, August 5: Contract Ilr-1143 with Central Oregon irrigation district for reconstruction of Crane Prairie Reservoir at estimated cost of \$400,000, payable in 78 equal semiannual installments.

1939, November 21: Contract with Pacific Power & Light Co. for \$67,938, payable in 40 equal annual installments.

1941, October 1: County of Jefferson Contract I56r-77 for \$123,666.78.

1942, June 2: Contract I56r-85 with city of Prineville for concrete siphon, payable in 10 equal annual installments.

1945, September 5: Contract with North unit irrigation district. Increased maximum obligation of the district to \$9,500,000.

1949, October 26: Contract with North unit irrigation district. Increased maximum obligation of the district to \$11,050,000, to be repaid in 40 years.

1952, May 6: City of Culver, Contract I74r-1756 for \$876.06.

1954, February 13: Contract 14-06-W-71 with North unit irrigation district. Increased maximum obligation of the district to \$12,130,000, to be repaid in approximately 78 years. Annual assessments will begin in 1957 and will be varied by the "normal and percentage" plan plus parity.

1954, April 8: City of Madras, Contract 14-06-100-357 for \$24,000.

EDEN PROJECT

FARSON, WYO.

The Eden project in Sweetwater County, Wyo., was approved for construction by the President on September 18, 1940, under the water conservation and utility provision of the Interior Department Appropriation Act of 1940 (53 Stat. 685, May 10, 1939). It was reauthorized by act of Congress on June 28, 1949 (63 Stat. 277).

The project will provide a full water supply for the irrigation of 20,000 acres of arid land, including 9,000 acres of presently inadequately irrigated land in the vicinity of Eden and Farson, Wyo. Project features include Big Sandy Dam and Reservoir, Prospect Diversion Dam, Prospect Canal, Means Canal, Eden Canal rehabilitation and enlargement, lateral system, and drainage system.

The total estimated cost of the project features is \$8,073,822 allocated to irrigation. A contract has been executed with the Eden Valley irrigation and drainage district which is consistent with the reauthorization act authorizing completion of the Eden project. This act provides that not less than \$1,500,000 of construction costs of the irrigation features shall be reimbursable by the water users in not to exceed 60 years. The act further provides "that construction costs of the irrigation features of the project which are not hereby made reimbursable by the water users shall be set aside in a special account against which net revenues derived from sale of power generated at the hydroelectric

plants of the Colorado River storage project in the upper basin shall be charged when such plants are constructed."

The features serving presently irrigated lands are being operated by the Bureau of Reclamation with funds provided by the water users. It is now anticipated that on or before June 1, 1957, notice will be given the district of the beginning of a 4-year development period for block 1 to commence January 1, 1958. Additional blocks of newly irrigated lands will be given a 7-year development period.

Repayment contracts.—The Eden Valley irrigation and drainage district repayment contract (Ilr-1579) was signed June 8, 1950. The contract provides that, of the construction cost of the irrigation features of the project, not less than \$1,500,000 for the project of 20,000 irrigable acres, or a proportionate part thereof, based on the actual irrigable area as determined by the Secretary of the Interior, shall be reimbursable by the water users.

CONTRACT

1950, June 8: Contract Ilr-1579 with Eden Valley Irrigation and Drainage District for reimbursable construction costs of irrigation features for lands in Wyoming. Repayment in not to exceed 60 years in successive, annual installments of the amount allocated by the Secretary to each irrigation block, and to commence with the calendar year next succeeding the termination

of the development period therefor. One-half of the installment due and payable on or before December 31 of each year, and the other one-half due and payable on or before May 31 of the following year. Contract provides a variable repayment plan based on price indices under which the annual installments shall not be more than 200 percent nor less than 15 percent of the base charge.

The allocation of costs:

Estimated cost of project features.....	\$8, 073, 822
Add: Other charges.....	76, 694
	<hr/>
Subtotal.....	8, 150, 516
Less: Nonreimbursable costs.....	17, 988
	<hr/>
Total costs.....	<u>8, 132, 528</u>

Reimbursable repayment:

From irrigation water users (basis 20,000 irrigable acres).....	\$1, 500, 000
From proposed Colorado River Storage project power revenues.....	6, 631, 743
Miscellaneous revenues.....	785
	<hr/>
Total.....	8, 132, 528

Payout schedule.—Payout of the reimbursable costs is scheduled for completion in 60 years following the respective development periods by annual installments of \$1.25 per irrigable acre.

The summary of status of repayment contract:

Total value of contracted repayment.....	\$1, 500, 000
Total matured charges.....	0
Total matured charges repaid.....	0
Total matured charges unpaid.....	0

EKLUTNA PROJECT

ANCHORAGE, ALASKA

Construction of the Eklutna project was authorized by act of Congress, July 31, 1950 (64 Stat. 382), to supply hydroelectric power to the cities of Anchorage and Palmer and outlying districts to supplement existing power sources.

Principal features of the project included the strengthening and repairing of an existing dam at the lake outlet, drilling and lining a tunnel 23,800 feet long and 9 feet in diameter to tap Eklutna Lake, construction of an underground steel penstock 1,375 feet long, erection of a powerplant equipped with two 15,000-kilowatt generators, and construction of 32 miles of 115-kilovolt transmission line terminating in a 30,000-kilovolt-ampere substation at Anchorage and 9 miles of 115-kilovolt transmission line terminating in a 5,000-kilovolt-amperes substation at Palmer.

Total project costs as of June 30, 1957 were as follows:

Production plant.....	\$30, 112, 406
Transmission plant.....	2, 222, 696
	<hr/>
Total, electric plant in service.....	32, 335, 102

Construction work in progress or authorized with funds available.....	\$331, 537
--	------------

Total project cost.....	32, 666, 639
-------------------------	--------------

Estimated final cost is \$32,759,692. All costs are allocated to power and are reimbursable. Repayment will be within 50 years or less by sale of power.

All project works are operated by the Bureau of Reclamation and are financed directly with Federal funds by an annual congressional appropriation.

Repayment contracts.—The full 30,000-kilowatt firm capacity of the project has been contracted for as follows:

	<i>Date</i>	<i>Kilowatts</i>
City of Anchorage.....	Nov. 23, 1953	16, 000
Chugach Electric Association (REA).....	Dec. 7, 1954	9, 000
Matanuska Electric Association, Inc. (REA).....	Nov. 29, 1954	5, 000

Repayment is made by monthly charges to the contractors for the project energy and capacity they use, with a minimum annual capacity charge guaranteeing a minimum annual revenue.

FALCON PROJECT

TEXAS

The Falcon Dam is the first of the major international storage dams which the Governments of the United States and Mexico agreed in the 1944 treaty to construct, operate and maintain jointly through the International Boundary and Water Commission.

The completion of the Falcon Dam in November 1953 created an international reservoir having a total capacity of 4,085,000 acre-feet for conservation and control of floods on the Rio Grande and providing hydroelectric power generating potentialities. The hydroelectric plant at the dam, authorized insofar as the United States is concerned by the act of October 5, 1949 (63 Stat. 701), was virtually completed and placed in operation in October 1954.

The Falcon Dam, on the Rio Grande about 130 miles upstream from Brownsville, Tex., was built by the International Boundary and Water Commission of the United States and Mexico. The 5-mile long, earth- and rockfill Falcon Dam has two powerplants—one on the Mexican side of the river and the other in Texas. The United States' powerhouse, like its Mexican counterpart, has three 10,500-kilowatt generators. Each powerplant contains three Francis-type turbines rated at 14,750 horsepower each at 100-foot head. Each plant has a centralized control room with separate and independent facilities, and is interconnected for transfer of energy from one to the other.

The joint operation and maintenance of the dam, reservoir, and powerplants by International Boundary and Water Commission are accomplished through overall supervision of the Commission and close coordination at the field level between superintendents of the respective sections of the Commission. The cost of operation and maintenance of Falcon Dam, pursuant to the terms of the 1944 treaty, is prorated between the

two Governments in proportion to the conservation capacity allotted to each country in the reservoir; that is, 58.6 percent to the United States and 41.4 percent to Mexico. The cost of operation and maintenance of the hydroelectric plants is, pursuant to the treaty, divided equally between the two governments, and the energy generated is assigned to each country in like proportion. The division between the two sections of the cost of operation and maintenance is accomplished as it was in the construction of the dam and powerplant, by allocation to each section of the Commission of a part of the work items in such a manner that the cost of the work performed by each Government will conform to the above-stated percentage. The United States' share of the energy generated at the dam and not required in the operation of the United States' portion of the project is delivered to the Secretary of the Interior for transmission and disposition pursuant to the terms of the act of June 18, 1954 (68 Stat. 255).

Repayment.—In House hearings in connection with act of October 5, 1949 (63 Stat. 701), the Department of State offered testimony as follows: Total cost of Falcon Dam, \$33.4 million; United States' share of this (58.6 percent), \$19.6 million; estimated cost of powerplant at the Falcon Dam, \$12.6 million; United States share (50 percent), \$6.3 million; United States to obtain 50 percent of the power. Annual cost to the United States for the powerplant would be \$423,788. Annual revenue is \$437,000, which is based on an estimate of 4 mills for firm power and 1.5 mills for secondary power. The powerplant will pay itself out in the 45th year of operation, and in the remaining 55 years of the economic life of the dam the powerplant would pay for 47 percent of the dam.

Power marketing agent.—Pursuant to the act of

Congress approved June 18, 1954 (68 Stat. 255), and to the Treaty with Mexico executed February 3, 1944, and proclaimed November 27, 1945 (59 Stat. 1219), between the Bureau of Reclamation of the Department of the Interior, and the United Section, International Boundary and Water Commission, Department of State, the Bureau has

been designated marketing agent in disposing of power and energy from the Falcon project.

The current major power contract in effect at Falcon project is contract No. 14-06-500-148 between the United States and Central Power & Light Co. It is an emergency contract in effect until midnight April 30, 1957.

NOTE: This study is based upon arrangements between the United States and Mexican Section, International Boundary and Water Commission, involving water exchanges to provide peaking capacity. The study reflects an estimated default in peaking capacity in every other year beginning in 1958.

FORT PECK PROJECT

FORT PECK, MONT.

The Fort Peck Project Act of May 18, 1938 (52 Stat. 403), authorized the completion, maintenance, and operation of the Fort Peck project. The Secretary of War was made responsible for completion, maintenance, and operation of the dam and powerplant. The Bureau of Reclamation is responsible for construction, maintenance, and operation of facilities for transmitting and marketing the electric energy generated by the powerplant. Under the act, schedules of rates and charges for electric energy are approved by the Federal Power Commission.

Sale of power began in fiscal year 1944.

Principal features of the project will include about 130 miles of 230-kilovolt transmission lines, 290 miles of 161-kilovolt transmission lines, and 540 miles of 115-kilovolt transmission lines. Numerous lower voltage transmission lines and tap lines are also included in the project. Power is furnished to customers directly from substations on these lines or by wheeling agreements over the lines of interconnecting power systems. The aggregate installed transformer capacity in the major substations will ultimately be about 300,000 kilovolt-amperes.

The principal features of the project in operation as of July 1, 1957, are 290.95 miles of 161-kilovolt transmission lines, 541.26 miles of 115-kilovolt

transmission lines, 19.61 miles of 69-kilovolt transmission lines, 13.79 miles of 57-kilovolt transmission lines, 48.84 miles of 34.5-kilovolt transmission lines, and 5.37 miles of 2.3-kilovolt transmission lines, and 30 substations having a combined capacity of 257,426 kilovolt-amperes.

The total estimated construction cost for power transmission facilities for the project is \$24,300,000. Under authority of the act of May 18, 1938, the entire cost of the powerplant and transmission facilities will be repaid from power revenues. These costs and the revenues associated with the project have been consolidated with those of the Missouri River Basin project for electric rate determination and repayment purposes. (See p. 169.)

All receipts from the sale and transmission of electric energy are classified as revolving funds and are immediately available for allotment and expenditure for operation and maintenance. Transfer of revenues in excess of an operation and maintenance working fund of \$500,000 is made in June of each year to the Treasury of the United States for credit to miscellaneous receipts.

The transmission facilities of the project are operated by the Bureau of Reclamation and the costs of operation and maintenance are financed directly from the revolving fund.

FORT SUMNER PROJECT

FORT SUMNER, N. MEX.

The Fort Sumner project in De Baca County of New Mexico was authorized by act approved July 29, 1949 (63 Stat. 483).

The original project was developed by private interests to irrigate approximately 6,500 acres of land. By 1949 floods had caused considerable damage to the diversion dam on the Pecos River, and the Fort Sumner irrigation district contracted with the Bureau of Reclamation to construct a new diversion dam and rehabilitate the existing irrigation system. Facilities of the project on which the Bureau of Reclamation performed construction work include Fort Sumner diversion dam, main canal, pumping plant, high line canal, drains and lateral system.

Total estimated cost of the project is \$2,433,342 and the cost to June 30, 1957, amounted to \$2,432,920. The entire amount is allocated to irrigation. The water users contributed land for

a value of \$175 and contracted to repay the balance of the total project costs.

Construction was completed on June 30, 1952, except for minor work, and repayment started in 1954.

The project is operated by the Fort Sumner irrigation district.

Repayment contract.—The repayment contract was signed on September 14, 1949, in the amount of \$2,464,000 and provides for repayment in 80 equal annual installments unless the district elects to make payments under the variable formula. The repayment obligation was adjusted to actual costs as of June 30, 1956, thus making the value of the repayment contract \$2,432,166.55.

CONTRACT

1948, November 5: Contract Ilr-1524 with Fort Sumner irrigation district for \$2,464,000, repayable in 80 equal annual installments unless district makes payments under the variable formula.

FRENCHTOWN PROJECT

MISSOULA, MONT.

The President authorized construction of the Frenchtown project in Missoula County, Mont., by approval of a finding of feasibility on September 21, 1935, pursuant to section 4 of the act of June 25, 1910 (36 Stat. 836), and subsection B of section 4 of the act of December 5, 1924 (43 Stat. 702).

The project was constructed to irrigate nearly 5,000 acres between Grass Valley and Huson, near Missoula, Mont. Construction of the canal was started October 3, 1935. Work on the diversion dam began April 9, 1936. Some water was available in 1936.

Project facilities, all constructed by the United States, consist of an earth and rockfill diversion dam on a side channel of the Clark Fork (Missoula) River, a gravity flow distribution system, including 17 miles of main canal, 10 laterals, and necessary water-control structures.

The cost of constructing the project was \$279,321. In addition, there are operation and maintenance costs of \$15,922 and interest funded in the amount of \$2,039, making a total project cost of \$297,282.

Project works were operated by Government forces until January 1, 1939, and since then, by the district.

Repayment contracts.—Water users organized the Frenchtown irrigation district on November 19, 1934, and entered into a repayment contract with the United States on July 11, 1935. Several amendatory contracts were concluded, primarily to adjust the maximum construction obligation. The most recent contract, concluded on September 6, 1951, was negotiated under authority of section 7 of the Reclamation Project Act of 1939 (53 Stat. 1187). This contract was approved by the Congress under the act of June 23, 1952 (66 Stat. 151), and signed by the Secretary on July 18, 1952.

CONTRACTS AND PUBLIC NOTICE

- 1935, July 11: Contract with Frenchtown irrigation district. Maximum construction charge not to exceed \$180,000, payable in 80 equal semiannual installments.
- 1936, June 26: Contract with Frenchtown irrigation district. Maximum construction charge not to exceed \$240,000, payable in 40 semiannual installments of \$2,250 and the balance in 40 equal semiannual installments.
- 1937, April 7: Contract with Frenchtown irrigation district. Maximum construction charge not to exceed \$260,000, payable in 40 semiannual installments at \$2,250 and 40 semiannual installments at \$4,250.
- 1938, January 10: Contract with Frenchtown irrigation district. Maximum construction charge not to exceed \$295,000, payable in 78 semiannual installments at graduated rates varying from \$625 for the first 8 payments to \$5,375 for payments 39 through 78.
- 1949, February 1: Contract with Frenchtown irrigation district. Authorized United States to reimburse the district for not to exceed \$3,000 for repair of damage caused by the 1948 flood. This money was nonreimbursable.
- 1951, September 6: Amendatory Contract Ilr-813 with Frenchtown irrigation district, effective July 18, 1952, providing for repayment in about 42 years. Fixed annual assessment may be replaced by variable payments by application of specified normal and percentage plan plus parity at the option of the district.
- 1953, January 8: Notice to Frenchtown irrigation district advising of actual contract value and obligation of district at that date.

¹ Obligation is based on amendatory contract approved by Secretary on July 18, 1952. This includes cost of economic study and interest on \$5,000 delinquent under old contract to effective date of this new contract.

² Delinquent accruals under contract dated July 11, 1935, with interest thereon, have been funded with construction obligation.

FRUITGROWERS DAM PROJECT

AUSTIN, COLO.

The construction of Fruitgrowers Dam project in Delta County, Colo., was approved by the President on January 11, 1938, under the provisions of section 4 of the act of June 25, 1910 (36 Stat. 835).

In 1939 the Bureau of Reclamation entered into a contract with the Orchard City irrigation district to reconstruct Fruitgrowers Dam and Reservoir and Dry Creek diversion dam and canal originally built by private irrigators in 1898 to furnish water to 2,600 acres of irrigable land.

The total cost of constructing the project features was \$200,309. The entire amount is repayable in 39 annual installments from 1942 through 1980, under the terms of the repayment contract dated September 7, 1939.

Operation and maintenance of the project features was transferred to the Orchard City irrigation district on March 1, 1940.

CONTRACT

1939, September 7: Contract Iir-1155 with the Orchard City irrigation district for repayment in 39 annual installments of the entire cost of the project.

1951, April 12: Final cost notice issued to district in amount of \$200,741.

The cost and repayment allocations:

Total project cost.....	\$200,309
Repayment of reimbursable costs from irrigation water users:	
For irrigation plant investment.....	200,309
For operation and maintenance funded....	432
Subtotal.....	200,741
Less revenues (water rentals).....	2,500
Total repayment obligation.....	198,241

GARDEN CITY PROJECT

GARDEN CITY, KANS.

The Garden City project was authorized for construction in 1905, and irrigation water from pumping units was available in 1908 and 1909. The cost of operation and maintenance proved too high to irrigate crops in large tracts. Furthermore, sufficient rainfall to mature fair crops lessened the desire of the landowners for an irrigation system, and payment of charges as they became due the United States was not made. The powerplant at Garden City was therefore closed in 1910.

The act of June 5, 1920 (41 Stat. 1054), provided

that contracts affecting lands in the Garden City project, between the Finney County Water Users' Association or individual landowners, and the Secretary of the Interior, for the supply and use of water from the irrigation plant of the United States, were canceled and relieved, and liens upon the lands created by such contracts were released and discharged.

The total amount that has been charged off as a loss to the Reclamation fund for this project is \$334,474.96.

GILA PROJECT

YUMA, ARIZ.

Construction of the Gila project in Yuma County, Ariz., was originally authorized under a finding of feasibility approved by the President on June 21, 1937, in accordance with section 4, act of December 5, 1924 (43 Stat. 701). The project was reauthorized and reduced in area to 115,000 acres by the act of July 30, 1947 (61 Stat. 628). The act of June 13, 1949, authorized the furnishing of water to the Yuma auxiliary project through the works of the Gila project (63 Stat. 172).

Project features include Imperial Dam, Gila desilting works, Gila gravity main canal, the Yuma Mesa canals and distribution system, the lateral system in the North Gila Valley originally constructed as part of the Yuma project, the Wellton-Mohawk canals and distribution system, and drainage and protective works. Upon full development, the project will provide irrigation service to 75,000 acres in the Wellton-Mohawk division and 40,000 acres in the Yuma Mesa division, which includes 15,000 acres in the North and South Gila Valleys. The total estimated cost for the Gila project is \$51,657,325.

The United States operates and maintains the project common features, the Yuma Mesa unit distribution system, and three main pumping plants in the Wellton-Mohawk division; and maintains only those works in the Wellton-Mohawk distribution system outside irrigation blocks. Care, operation and maintenance by the United States is financed both from advanced funds and appropriated construction funds.

WELLTON-MOHAWK DIVISION

The entire cost of the Wellton-Mohawk division direct features is scheduled for repayment by irrigation. The division's share of project common features also is allocated for repayment by irrigation, other than certain costs of the common features allocated to excess capacity due to reduction

in size of the Gila project by the act of July 30, 1947 (61 Stat. 628), which are nonreimbursable pursuant to the act of January 28, 1956 (70 Stat. 5).

Three irrigation blocks have been established on the Wellton-Mohawk division and transferred to the Wellton-Mohawk irrigation and drainage district for care, operation and maintenance. The district also operates certain limited facilities which have not as yet been included in established blocks. A tentative allocation of costs among blocks has not been made. The initial payment is due December 31, 1963.

YUMA MESA DIVISION

The costs allocable to the Yuma Mesa division also are scheduled for repayment by irrigation, aside from approximately \$6,094,511 of Gila project cost made nonreimbursable by act of July 30, 1956 (70 Stat. 5). A contract was executed on May 26, 1956, with the Yuma Mesa irrigation and drainage district, encompassing the Yuma Mesa unit, which established the general repayment obligation of the District at \$5,641,167.45. This amount has been allocated to two irrigation blocks for repayment over a 60-year period following the end of the development period for each block.

Pursuant to the act of June 13, 1949 (63 Stat. 172), water deliveries to the Yuma auxiliary project are made through the facilities of the Gila project. By contract of December 22, 1952, with the Unit B irrigation and drainage district, the district agreed to repay \$456,090 of Gila project costs for capacity utilized in diverting and carriage of water.

The North Gila Valley irrigation district, encompassing lands in the North Gila Valley, by contract of May 12, 1953, as amended, assumed a maximum repayment obligation of \$475,000 for its share of Gila project works. The remaining

capacity of 130 cubic feet per second in the Gila gravity main canal, presently available for South Gila Valley lands, has not been contracted for. This capacity is now being utilized to serve a number of Warren Act contractors, and a proportionate amount of the water charges is applied against construction costs.

CONTRACTS

- 1952, March 4: Contract Ilr-1591 with Wellton-Mohawk irrigation and drainage district. Established a maximum repayment obligation of \$42 million to be allocated for repayment among irrigation blocks. Payments are to begin following a 10-year development period for each block at an annual rate of one-sixtieth of the repayment obligation of the block. The initial payment for the first irrigation block is not due until December 31, 1963.
- 1954, June 19: Wellton-Mohawk irrigation and drainage district, supplemental to March 4, 1952, contract. Deals with the supply and cost to the district of power and energy for project purposes.
- 1954, October 13: Wellton-Mohawk irrigation and drainage district, amendatory to March 4, 1952, contract. Provides for termination of incremental value provisions.
- 1954, December 16: Wellton-Mohawk irrigation and drainage district, amendatory to March 4, 1952, contract, relative to establishment, operation and maintenance of irrigation blocks and works.
- 1955, April 25: Wellton-Mohawk irrigation and drainage district, supplementary to March 4, 1952, contract, relative to construction of electric facilities, transmission and charge for power.
- 1955, December 9: Wellton-Mohawk irrigation and drainage district, supplemental and amendatory to March 4, 1952, contract. Provided for transfer of certain works to the district for operation, and advance of operation and maintenance funds.
- 1952, December 22: Unit B irrigation and drainage district. Provided for repayment of \$456,090 of Gila project costs for capacity utilized by the dis-

trict, and repayment of not to exceed \$510,000 for construction, extension and improvement of Yuma auxiliary project works. Repayment for each acre under water right is to be made in 120 equal semi-annual instalments. The initial payment date was December 1, 1953.

- 1953, May 12: North Gila Valley irrigation district. Contract 14-06-W-54 provided for repayment by the district of maximum obligation of \$325,000 in 120 equal semiannual instalments, with initial payment due on January 1, 1954.
- 1954, June 24: Contract 14-06-W-66 with North Gila Valley irrigation district, amendatory and supplemental to May 12, 1953, contract. Provided for increase in general repayment obligation to \$475,000, and initial payment date was advanced to January 1, 1955.
- 1956, May 26: Contract 14-06-W-102 with Yuma Mesa irrigation and drainage district. Established a maximum repayment obligation of \$5,641,167.45, allocated between two irrigation blocks. Payment is to begin on January 1, 1958, for block 1 and on January 1, 1962, for block 2. Repayment of the total obligation for each block is scheduled over a 60-year period at the rate of one-half of 1 percent annually for the first 10 years, 1 percent annually for the next 10 years, and 2½ percent annually for the last 10 years.

In addition to the foregoing, a number of small miscellaneous water contracts have been executed on the Gila project, which are summarized separately under the tabulation entitled "Miscellaneous Water Contracts."

The summary of status of repayment contracts (excludes amount of \$456,090 covered by unit B irrigation and drainage district contract of December 22, 1952):

Total value of contracted repayment.....	\$48, 116, 167
Total matured charges.....	23, 750

GRAND VALLEY PROJECT

GRAND JUNCTION, COLO.

The Grand Valley project, located near Grand Junction in Mesa County, Colo., was examined and reported upon by a board of Army Engineers in accordance with the act of June 25, 1910 (36 Stat. 835), and approved by the President January 5, 1911.

The original project features include the diversion dam and headworks on the Colorado River, a distribution system consisting of 55 miles of main canal and 166 miles of laterals, and a pumping plant to serve lands above gravity diversions. Other project features consist of 142 miles of open drains and a powerplant of 3,000-kilowatt capacity. The constructed features serve 33,344 acres under the Gravity and Orchard Mesa divisions and 8,400 acres of Warren Act lands by gravity and pumping in the Palisade and Mesa County irrigation districts. The project consists of the Garfield Gravity Division, which was the original project, and the Orchard Mesa division, begun in 1922.

GARFIELD GRAVITY DIVISION

The total cost of constructing the Garfield Gravity division features is \$6,269,770, including estimated rehabilitation and betterment costs. The entire amount, with the exception of the chargeoff of \$1,839,426 under the Omnibus Adjustment Act of May 25, 1926 (44 Stat. 636), and contributed funds of \$211,300 together with revenues and other cost adjustments, is repayable under the terms of the repayment contracts with the Grand Valley Water Users Association. The Omnibus Adjustment Act authorized the suspension of construction charges against project lands found to be temporarily unproductive. A powerplant was constructed on the project with funds (\$210,500) advanced by the Public Service Co. of Colorado. The company operates the plant and pays \$12,000 a year to the United States,

this amount being credited to the annual installment on construction features, payment to be made for a period of 25 years.

The power company pays a minimum of \$3,360 annually for the operation and maintenance of that portion of the canal system that delivers power water.

On January 1, 1949, the Grand Valley Water Users Association assumed the operation and maintenance of project facilities.

Rehabilitation and betterment.—On March 3, 1950, a contract with the Grand Valley Water Users Association for rehabilitation and betterment of certain Garfield Gravity Division irrigation works was executed. On March 5, 1951, this contract was amended, increasing the contractual obligation from not to exceed \$1,500,000 to not to exceed \$1,900,000. The work was completed at a cost of \$1,658,328. Repayment commenced in 1954 and is scheduled for completion in 2019.

CONTRACTS

- 1928, January 4: Contract Ilr-644 with Grand Valley Water Users Association. Association assumed obligation to repay \$1,938,571 project construction cost in 40 graduated annual installments.
- 1931, June 19: Contract with the United States, Grand Valley Water Users Association, and the Public Service Co. of Colorado. The Public Service Co. advanced funds to build a 3,000-kilowatt powerplant on the project, paying the association \$12,000 annually for 25 years to be applied on project construction costs.
- 1942, March 27: Amendatory Contract Ilr-644 with the Grand Valley Water Users Association. Covers rehabilitation costs of \$75,000 on tunnel No. 3, to be repaid in 26 equal annual installments.
- 1945, January 27: Amendatory Contract Ilr-644 with the Grand Valley Water Users Association. Unaccrued balance of obligation under the 1928 and the 1942 contracts to be paid in 58 semiannual installments, the first 30 installments of \$17,606 and the last 28 installments of \$35,210 to be paid in June and December of each year.

ORCHARD MESA DIVISION

1950, March 3: Contract Ilr-1567 with Grand Valley Water Users Association. Emergency repairs and rehabilitation of project works. Estimated obligation was \$1,500,000, to be repaid in 58 years, with first installment due in 1954, the first 20 annual installments to be token payments until the 1945 contractual payments are completed, the balance of the indebtedness to be repaid in 38 annual installments of \$33,500.

1951, March 5: Contract Ilr-1567 with the Grand Valley Water Users Association amends the 1950 contract, increasing the total obligation to \$1,900,000.

The status of the Garfield Gravity division repayment on June 30, 1957, is as follows:

Total value of contracted repayment.....	\$3, 782, 642
Total matured charges.....	906, 093
Total charges repaid.....	906, 093
Total matured charges unpaid.....	0

On February 18, 1922, the Orchard Mesa irrigation district contracted with the United States and the Grand Valley Water Users Association for the reconstruction of its irrigation facilities and for provision of water through the association's facilities. The cost of this work, \$1,182,773 together with interest and penalties funded, is fully repayable under the terms of the repayment contract. The Orchard Mesa division of the project provides water to 10,027 acres and is operated by the district.

Rehabilitation and betterment.—On October 4, 1955, the Orchard Mesa irrigation district signed a contract to repay costs not to exceed \$180,000 of a rehabilitation and betterment program for

certain Orchard Mesa division irrigation works. The costs of the program are to be repaid in six equal annual installments commencing in 1970.

CONTRACTS

1922, February 18: Orchard Mesa irrigation district contract for reconstruction of district's irrigation system. Estimated cost \$1,000,000 payable in 20 graduated annual installments.

1931, September 10: Repayment period extended to 40 years.

1955, October 4: Contract No. 14-06-400-325 with Orchard Mesa irrigation district for rehabilitation and betterment of division's works at a cost of not to exceed \$180,000 and to be repaid in 6 equal installments commencing in 1970.

The status of the Orchard Mesa division repayment on June 30, 1957, is as follows:

GRANTS PASS PROJECT

GRANTS PASS, OREG.

The Grants Pass irrigation district, located in the valley of Rogue River in southwestern Oregon near the city of Grants Pass, was organized January 1917. The irrigation system provides for direct diversion from Savage Rapids Dam into a gravity flow main canal and into two highline canals through direct connected hydraulic turbine pumps. Currently there are about 10,000 irrigable acres within the district, most of which are used for part-time and residential purposes in and near the city of Grants Pass.

The Interior Department Appropriation Act of 1950 (October 12, 1949, 63 Stat. 765), authorized the emergency reconstruction of the Northwest unit pipeline of the Grants Pass irrigation district in Jackson and Josephine Counties in southwestern Oregon as part of the Deschutes project by appropriating \$100,000 for the work.

The \$100,000 was expended on the construction of a pipeline under the bed of the Rogue River to replace flood-damaged lines across the river which had to be removed at the end of each irrigation season and replaced each spring, and the replacement of deteriorated adjacent pipelines. The entire amount is allocated to irrigation and repayable by project water users. Work was started and completed during fiscal year 1950 on an emergency basis, after negotiation of a suitable repayment contract with the district.

Prior to completion of work on the pipeline, it was apparent that major repairs were needed on Savage Rapids Dam. The Interior Department Appropriation Act of 1953 (July 9, 1952, 66

Stat. 445) authorized this work by providing \$700,000 for fiscal year 1953. This work was started March 16, 1953, and substantially completed February 22, 1955. Costs through June 30, 1957, totaled \$708,883. Notice of actual costs has not been issued to the district since there are several small outstanding transactions that will result in slight changes. The Interior Department Appropriation Act of 1957 (July 2, 1956, 70 Stat. 474) provided \$208,000 in nonreimbursable funds for fish protective facilities at the dam. Nonreimbursable costs through June 30, 1957, totaled \$22,533.

The Grants Pass irrigation district operates the project works. Repayment of all rehabilitation work began in 1953 and will be completed in 2010.

CONTRACTS AND NOTICES

- 1949, December 16: Contract Ilr-1553 with Grants Pass irrigation district, not to exceed \$100,000.
- 1951, December 29: Formal notice of actual construction cost from Acting Secretary of Interior, \$100,000, 40 annual installments, \$2,500 each, commencing in fiscal year 1953.
- 1952, December 12: Contract 14-06-100-43 with Grants Pass irrigation district, not to exceed \$850,000, for rehabilitation of Savage Rapids Dam. Repayment period will extend for about 55 years. Annual payments are fixed until the district elects to apply a modified normal and percentage plan specified in the contract.

The summary of status of repayment contracts:

Total value of contracted repayment.....	\$950,000
Total matured charges.....	12,500
Total matured charges repaid.....	12,500
Total matured charges unpaid.....	0

¹ Includes \$100,000 actual cost obligation for rehabilitation of Northwest unit pipeline, and \$850,000 maximum contractual obligation for rehabilitation of Savage Rapids Dam.

HONDO PROJECT

CARLSBAD, N. MEX.

The Hondo project was authorized by the Secretary under the Reclamation Act of 1902 (32 Stat. 388). It was examined and reported upon by a board of Army Engineers and approved by the President on January 5, 1911, in accordance with the act of June 25, 1910 (36 Stat. 835). The project was completed in 1907, but proved to be unsuccessful because of an insufficient rainfall and the development of extensive leaks in the reservoir. On April 1, 1917, the United States withdrew its employees and ceased operation.

No water-right applications were filed, no liens established against the lands, and no repayment contract entered into.

The Hondo Irrigation Association was formed in 1921 for the purpose of taking over operation and maintenance of the Hondo project. On September 2, 1922, a contract was executed by which the United States delivered all works of the Hondo project to the association for the purpose of operation and maintenance.

In 1924 the committee of special advisers (Fact Finders Committee) recommended that the Hondo project be appraised and sold, and the losses incurred charged to the Reclamation fund. Total cost of construction is \$339,377, and of operation and maintenance is \$32,411.

HUMBOLDT PROJECT

LOVELOCK, NEV.

Construction of the Humboldt project in Pershing County, Nev., was approved by the President on November 6, 1935, under the terms of subsection B, section 4 of the act of December 5, 1924 (43 Stat. 701).

The original plan provided for the construction of Rye Patch Dam and Reservoir on the Humboldt River to supply irrigation water to 40,000 acres. The purchase of ranching properties in the Battle Mountain Valley for their decreed water rights was made to firm up the project's water supply.

The total estimated cost of constructing the project features (including rehabilitation) is \$1,337,321. This amount, together with operation and maintenance funded, less revenues, is fully repayable by the Pershing County water conservation district. Operation and maintenance of the project was transferred to the district on January 15, 1941.

Repayment contracts.—The original repayment contract was signed by the Pershing County water conservation district on October 1, 1934, to repay the construction cost of the Humboldt project facilities in 36 equal annual installments, commencing in 1944.

On October 6, 1955, the Pershing County water conservation district signed a contract to repay the costs of rehabilitation and betterment of works in the Battlemountain water development and collection system. The amount of the obligation is not to exceed \$123,000, to be repaid in 20 equal annual installments following notice of completion of work and statement of final cost.

CONTRACTS

- 1934, October 1: Contract Ilr-774 with the Pershing County water conservation district. District agreed to repay construction costs, not to exceed \$1,500,000 in 36 equal annual installments.
- 1941, August 8: Supplemental Contract Ilr-774 with the Pershing County water conservation district. Excess land provisions of the Federal reclamation laws were nullified on the Humboldt project lands as provided by the act of Congress of November 29, 1940 (Public Law 883, 76th Cong.).
- 1948, April 6: Letter notice to the Pershing County water conservation district stating that construction of project features was completed and the costs to be repaid were \$1,312,101.08. Credit from sale of Pitt ranch, \$100,856.40. Balance to be repaid by irrigators, \$1,211,244.68.
- 1955, October 6: Contract 14-06-400-429 with Pershing County water conservation district of Nevada, contract obligation \$123,000, for rehabilitation and betterment of certain project features. The obligation is payable 5 percent annually on October 1 each year following notice of final cost.

The summary of status of repayment contracts:

HUNGRY HORSE PROJECT

COLUMBIA FALLS, MONT.

The Hungry Horse project in Flathead County was authorized by the congressional act of June 5, 1944 (58 Stat. 270). The dam and powerplant are designed for flood control, generation of electrical energy, regulation of the Flathead River, and increasing firm power at downstream plants.

Repayment of the total estimated cost of \$101,456,489, with the exception of a nonreimbursable allocation for flood control and navigation, will be made by revenues from electrical energy produced at the powerplant and at other public and private powerplants downstream.

The dam and powerplant is operated by the Bureau of Reclamation. The transmission and

sale of all electrical energy is handled by the Bonneville Power Administration.

The tentative allocation of Hungry Horse costs is as follows:

Power and river regulation.....	\$82, 042, 192
Flood control and navigation.....	19, 669, 000
Total.....	101, 711, 192

The total estimated plant investment in the Hungry Horse project is as follows:

Village and service facilities.....	\$1, 706, 017
Dam and reservoir.....	77, 538, 230
Powerplant.....	20, 051, 425
Transmission plant.....	2, 146, 654
General plant.....	268, 866
Total.....	101, 711, 192

HUNTLEY PROJECT

BALLANTINE, MONT.

Construction of Huntley project in Yellowstone County, Mont., was authorized by the Secretary of the Interior on April 18, 1905, under the Reclamation Act of June 17, 1902 (32 Stat. 388). It was examined and reported upon by a board of Army Engineers and approved by the President on January 5, 1911, in accordance with the act of June 25, 1910 (36 Stat. 835).

The project works developed to supply water to 32,500 acres of land consist of an 8-foot diversion dam in the Yellowstone River; approximately 32 miles of main canal with an initial capacity of 600 second-feet; about 200 miles of laterals; 183 miles of drains; a hydraulic vertical turbine pumping plant using water power from a drop in the main canal to lift water 43.5 feet to irrigate approximately 5,000 acres on the lower end of the project; and a storage reservoir with a capacity of 400 acre-feet.

Project works were transferred to Huntley project irrigation district for operation and maintenance on December 31, 1927.

A repayment contract executed January 2, 1927, provides that the Huntley project irrigation district assumes obligations previously under individual water-right applications and certain other costs including additional drainage work. The repayment period was extended to 40 years with additional time for previous delinquencies and for supplemental construction charges.

PUBLIC NOTICES AND CONTRACTS

- 1907, May 21: Public notice. Construction charge \$30 per acre, payable in 10 equal annual installments.
- 1913, August 9: Public notice. Construction charge \$50 per acre, payable in 10 graduated installments.
- 1914, November 3: Public notice. Construction charge \$60 per acre, payable in 20 graduated installments.
- 1915, October 19: Public notice. Construction charge \$60 per acre, payable in 20 graduated installments.
- 1915, December 23: Public notice. Covers supplemental construction for first unit, \$15 per acre, payment in installments of \$1.80 and \$2 per acre after 20-year repayment period.
- 1920, June 30: Public notice. Announces that \$50 rate in public notice of August 9, 1913, includes the \$15 per acre supplemental construction charge.
- 1927, January 2: Contract IIR-102 with Huntley project irrigation district. District assumes obligations under individual water-right applications, assumes obligation for certain costs incurred not covered by public notices, and assumes obligation for additional drainage work. Extends repayment period to 40 years. Extends time for payment of delinquent construction and operation and maintenance charges. Supplemental construction charges to be paid in 10 years after regular construction charges.
- 1952, April 10: Contract I79r-2353 with State of Montana for \$520.71.
- 1955, July 11: Contract 14-06-600-1558 with Worden Community Water Users Association, Inc., for \$2,240.00.
- 1957, January 4: Contract 14-06-600-2140 with Huntley project irrigation district for \$100,000 to rehabilitate and repair the Diversion Dam. Repayment to be successive annual installments of \$5,000 beginning in 1960 and to continue until the full amount expended is repaid.

HYRUM PROJECT

WELLSVILLE, UTAH

The construction of Hyrum project in southern Cache County, Utah, was authorized under subsection B of section 4 of the act of December 5, 1924 (43 Stat. 701), by approval of the President, November 6, 1935.

The project furnishes supplemental water to an area of about 6,800 irrigable acres. Project features include the Hyrum Dam and Reservoir on the Little Bear River, a diversion dam on the East Fork of the Little Bear River, the Hyrum-Mendon Canal, the Wellsville Canal, and the Hyrum Feeder Canal.

The total cost of constructing the project features was \$953,854. Of this amount, \$11,885 was contributed funds not repayable. The balance, plus \$2,077 of operation and maintenance funded, is repayable by the South Cache Water Users Association.

Operation and maintenance of the project was transferred to the South Cache Water Users Association May 1, 1936.

CONTRACTS

1933, October 9: Contract Ilr-745 with South Cache Water Users Association provided for payment of construction cost in 40 equal annual installments.

1941, December 31: Amendatory contract with South Cache Water Users Association rescheduled installments on a graduated basis within a 40-year period. All except the first four payments are sub-

ject to the normal and percentages variable repayment plan.

1950, May 24: Amendatory contract with South Cache Water Users Association schedules the remaining construction obligation, \$769,000, over a period of 47 years with all installments subject to the normal and percentages variable repayment plan. Base annual installments: \$17,240 through year 1970; \$16,155 from year 1971 through 1995, when payment will be completed. This contract, negotiated pursuant to section 7 of the Reclamation Project Act of 1939, was approved by special congressional act of August 5, 1950.

The summary of status of repayment contracts:

Total value of contracted repayment.....	\$944,046
Total matured charges.....	291,934
Total matured charges repaid.....	291,934
Total matured charges unpaid.....	0

The cost and repayment allocations:

Total project cost.....	\$953,854
Allocation of costs—Irrigation:	
Reimbursable by water users.....	941,970
Contributions.....	11,884
Total.....	953,854

Repayment of reimbursable costs:

From irrigation water users for irrigation plant investment.....	941,970
Operation and maintenance funded.....	2,076
Total.....	944,046

¹ Decrease. Adjustment of accruals to conform to terms of 1941 contract.² Increase. Adjustments to conform to terms of 1950 amendatory contract.

INTAKE PROJECT

SIDNEY, MONTANA

The Intake project was found feasible by the Secretary on October 11, 1943, and approved by the President on January 20, 1944, under the terms of the Water Conservation and Utilization Act of August 11, 1939 (53 Stat. 1418), as amended.

Project works, to supply water to approximately 880 acres in Dawson County, Mont., consist of an electric motor and 2 pumps. Each pump serves a lateral lifting water 10 and 16 feet, respectively. There are 1.5 miles of drains.

A repayment contract executed on March 30, 1945, provides that the Intake irrigation district will repay \$46,900 of the total construction cost over a period of 40 years starting in 1951. The transmission line and substation for the project

have been constructed as part of the Fort Peck project in accordance with the authorization.

The project is operated by the Board of Control of the Lower Yellowstone project, with funds advanced by the Intake irrigation district.

CONTRACT

1945, March 30: Contract Ilr-1436 with Intake irrigation district for \$46,900, repayable in 40 years.

The repayment obligation is summarized as follows:

Gross project cost.....	\$94, 213
Total repayment obligation.....	1 46, 900
Nonreimbursable.....	47, 313

¹ Pursuant to original finding of feasibility.

KENDRICK PROJECT

WYOMING

The Kendrick project in Carbon and Natrona Counties, Wyo., was authorized by a finding of feasibility approved by the President August 30, 1935. The Alcova powerplant was authorized August 22, 1950, as an incremental addition under provisions of section 9 (a) of the Reclamation Project Act of 1939 (53 Stat. 1187).

The major project features include the Seminoe Dam, Reservoir, and powerplant—primarily for water storage and power production, the Alcova Dam, Reservoir, and powerplant—primarily for diversion of irrigation water from the North Platte River and for power production, the Casper Canal, laterals, and drainage facilities, and a power transmission system.

The tentative cost and repayment allocations:

Estimated project cost (excluding second unit).....	\$31, 390, 761
<hr/>	
Allocation of costs:	
Irrigation.....	15, 115, 827
Power.....	16, 274, 934

Repayment of costs:	
From power revenues:	
Electric plant investment.....	16, 274, 934
Irrigation investment.....	14, 515, 827
<hr/>	
Subtotal.....	30, 790, 761
From irrigation water users ¹	600, 000
<hr/>	
Total repayment by project.....	31, 390, 761

¹ Irrigation data projected from amendatory contract authorized by act of Sept. 4, 1957.

The Kendrick project lands are comprised in two units initially planned for the irrigation of 66,000 acres of land in the Casper-Alcova irrigation

district. Planning refinements and reclassification of the land has reduced this total to 39,500 acres. The aforementioned project works have been completed, with the exception of certain drainage facilities, to serve the first unit containing 23,000 irrigable acres. Except for capacity in the Casper Canal, construction of irrigation facilities has been confined to the first unit of the project.

Project hydroelectric power production began at the Seminoe 32,400-kilowatt plant in August 1939, and at the Alcova 36,000-kilowatt plant in July 1955. Power production is integrated into the MRB western division power system. Initial deliveries of irrigation water were made in 1946. The United States has operated the irrigation works during the construction period on a water rental basis. It will continue to operate the dams, reservoirs, and power facilities, but the care, operation and maintenance of the canal, laterals and drainage works will be taken over by the Casper-Alcova irrigation district January 1, 1958.

Repayment contracts.—The original repayment contract made August 3, 1935, with the Casper-Alcova irrigation district, covering the first unit, has long been deemed unworkable. It was based on an irrigable area of 35,000 acres which has since been reduced to 23,000 acres and preliminary payment capacity estimates which have since been found excessive. An amendatory contract was approved by the district April 27, 1957, and its execution authorized by act of Congress September 4, 1957 (71 Stat. 608). As amended, the contract will provide for the district to (a) operate and maintain the canal, laterals, and drainage work, including the construction of future drains as required, at no expense to the United States beginning January 1, 1958; (b) advance \$10,000 per

¹ Historical data prior to fiscal year 1987 are not reported. Accounts show a cumulative deficit in irrigation operations of \$36,753 through June 30, 1987. Miscellaneous revenues and contributions total \$48,914 through June 30, 1986.

annum, as its share of the operation and maintenance of the reserved works, following which water will be delivered to the district to the extent of 2 acre-feet per acre irrigation, and (c) pay 50 cents per acre-foot for the delivery of water in excess of 2 acre-feet per acre irrigated until a total of \$600,000 is accumulated as a credit on the construction costs of the project. The enabling act of September 4, 1957, provides an acreage limitation

of 480 acres instead of the 160 acres provided by Reclamation law generally.

CONTRACT

1935, August 3: Contract Ilr-811 with Casper-Alcova irrigation district; district assumed obligation of \$2,800,000 payable in 80 semiannual installments due June 30 and December 31 in the year following issue of public notice by the Secretary of Interior that water is available.

KING HILL PROJECT

KING HILL, IDAHO

The King Hill project was promoted under the Carey Act in 1908. The Secretary determined the project practicable July 2, 1917, pursuant to Appropriation Act of June 12, 1917 (40 Stat. 105, 148), but it was not a success. In 1917 the Bureau of Reclamation undertook repair and reconstruction work on the irrigation system of the project as a war measure to increase crop production. The King Hill irrigation district contracted with the United States to repay a total obligation of \$2 million but was subsequently unable to make payments.

The project was difficult and costly to operate, the soils were low in fertility, and the farmers were not prosperous. The District took over operation and maintenance in 1926, but was unable to collect sufficient money to keep the system in repair. In 1929 a committee which made an economic survey of certain Reclamation projects concluded that the King Hill project was an insolvent enterprise and recommended

that no further expenditures be made and that the entire indebtedness owing by the King Hill Irrigation District to the United States be written off.

The act of June 18, 1934 (48 Stat. 980), authorized the Secretary of the Interior to enter into a contract with the King Hill irrigation district, by which the District and the United States would rescind previous agreements and be released from all obligations, and the United States would convey to the District all of its interest in the King Hill project, including water rights and any real estate acquired or held.

The United States entered into such a contract on September 28, 1934, with the King Hill irrigation district. The amount of \$1,987.854.04 has been charged off as a loss to the Reclamation Fund.

The King Hill irrigation district is now operating the area as a private project.

KLAMATH PROJECT

OREGON-CALIFORNIA

The Secretary of the Interior authorized the Klamath project on May 15, 1905. Construction work started in 1906, and water was delivered to lands of the first unit on May 16, 1907. In succeeding years the area of land receiving water has been constantly increasing until now the lands served total approximately 217,000 acres. Full irrigation supplies are available to approximately 133,000 acres of project lands, with the balance supplied under the Warren Act and other special contracts.

The irrigable lands of the project are located

in Klamath County in south-central Oregon, and Siskiyou and Modoc Counties in north-central California. The project works supply irrigation water to the project lands and also provide flood control on Lost River for the protection of lands in the Tule Lake Basin which originally received all of the flow of Lost River. The project water supply comes from three storage reservoirs—Clear Lake, Gerber, and Upper Klamath Lake, which have a total capacity of 1,494,400 acre-feet.

LANGELL VALLEY DIVISION

The United States has constructed irrigation works, including Clear Lake and Gerber Reservoirs, for the irrigation of lands in the Horsefly irrigation district and the Langell Valley irrigation district.

The districts which comprise the Langell Valley division have contracted to repay a total of \$935,192. Repayments began in 1928 and as of June 30, 1957, \$337,468 had become due and \$387,445 had been paid.

Moratoriums have extended the original repayment period to 1979. Certain lands were placed

in class 6 pursuant to the act of May 25, 1926 and these construction charges have been charged off as a loss to the Reclamation fund.

The districts operate the distribution systems and the United States operates the reservoirs.

Determination of repayment obligation as of June 30, 1957:

Cost.....	\$966,443
Penalty funded.....	947
Less chargeoff.....	31,269
Net.....	936,121
Adjustment to be made.....	929

CONTRACTS

and provided for actual expenditures of \$40,200 for drainage.

- 1922, March 27: Contract Ilr-112 with Horsefly Irrigation district and Langell Valley irrigation district for construction of irrigation system for lands in Langell Valley. Estimated cost \$474,000, payable in 40 semiannual graduated installments.
- 1923, June 18: Contract with Langell Valley irrigation district for construction of Gerber Reservoir and additional irrigation works at estimated cost of \$700,000, payable in 40 semiannual graduated installments.
- 1927, July 1: Contract with Langell Valley irrigation district. Extended repayment period to 40 years

- 1929, May 7: Contract with Horsefly irrigation district extending repayment period to 39 years.
- 1931, April 13: Contract with Horsefly irrigation district and Langell Valley irrigation district. Contract provides for dredging Clear Lake channel and construction of Dry Lake pumping plant.
- 1951, May 17: Contract with Langell Valley irrigation district for inclusion of lands and adjustment of water rights.
- 1953, November 13: Contract with Langell Valley irrigation district for rehabilitation and betterment in the amount of \$40,200.26.

MAIN DIVISION

The Klamath irrigation district and individual water-right applicants have contracted obligations of \$2,275,348 to repay the United States. Repayments began in 1909. As a result of the passage of the Omnibus Adjustment Act in 1926, the district's obligation was rescheduled in a contract providing for payment over a 40-year period, replacing the individual water-right applications. A total of \$1,935,557 had become due and paid at the close of fiscal year 1957.

The division has been operated by the Klamath irrigation district since January 1, 1955.

Determination of repayment obligations as of June 30, 1957:

Gross cost	\$2,692,072
Operation and maintenance funded	65,166
Interest funded	15,444

Total	2,772,682
Less:	
Construction revenues	21,464
Contributions	344,177
Chargeoff	63,474
Net	2,343,567
Adjustment to be made	68,219
Total	2,275,348

PUBLIC NOTICES AND CONTRACTS

- 1908, November 18: Public notice. Construction charge \$30 per acre, payable in 10 equal annual installments.
- 1915, September 15: Public notice. Supplemental construction covering drainage work. \$12.50 per acre payable additional installments after 20-year repayment period.
- 1917, February 12: Public notice for second unit. Construction charge \$30 per acre, payable in 20 graduated annual installments.
- 1917, March 31: Public notice for third unit. Construction charge \$39 and \$45 per acre, payable in 20 graduated annual installments.
- 1918, July 16: Contract with Klamath irrigation district. District assumed obligations under individual water-right applications.
- 1920, June 28: Contract with Klamath irrigation district. Supplemental construction covering concrete lining of the "C" canal, cost \$175,000, payable in four semiannual installments, beginning in 1937 (for lands outside unit 1) and 1941 (for lands within unit 1).
- 1922, September 29: Public notice for Tule Lake division. Construction charge \$90 per acre, payable in 20 graduated annual installments.
- 1927, June 25: Contract with Klamath irrigation district extending repayment period to 40 years.
- 1928, November 24: Contract with Klamath irrigation district for construction of drainage works at estimated cost of \$300,000 payable in semiannual installments, 1938 to 1956.
- 1937, September 30: Contract with Enterprise irrigation district for license to use power site on "C" canal. Obligation \$7,732, payable in 30 years.
- 1950, June 2: Contract with Klamath irrigation district for construction of pumping plants and enlargement of C-4 lateral at estimated cost of \$150,000, payable in semiannual installments, 1952 to 1961. Actual costs and amount to be repaid \$146,621.11.
- 1954, November 29: Contract for transfer operation and maintenance.

PUMPING DIVISION

Surrounding and contiguous to the Main division land are some 17,000 irrigable acres which cannot be reached directly by gravity systems. Consequently, five small irrigation districts and 92 individuals have contracted under the Warren Act for the right to pump water, principally from the canals of the Main division. These irrigation districts have contracted with the United States for the repayment of a total of \$504,468 for their

share of the costs of construction allocated to the Pumping division. Repayments due from 1920 to June 30, 1956, total \$253,633, or 51 percent. Collections on the construction accounts to June 30, 1957, have been \$268,122, leaving an unpaid balance of \$539.

Determination of repayment obligation as of June 30, 1957:

Construction cost	\$514,816
Less revenues	22,255
Total	492,561
Adjustments to be made	11,907
Total	504,468

CONTRACTS

- 1918, December 21: Contract Ilr-403 with Pine Grove irrigation district for water right for 954 acres at \$16 per acre, payable in 20 graduated annual installments.
- 1920, July 31: Contract Ilr-405 with Upper Van Brimmer drainage district for drainage and betterments in amount of \$28,050, payable in 20 graduated annual installments.
- 1920, October 5: Contract Ilr-399 with Enterprise irrigation district for water right for 2,981 acres at \$16 per acre, payable in 20 graduated annual installments.
- 1922, September 9: Contract Ilr-195 with Malin irrigation district for water right for approximately 4,000 acres at \$34 per acre, payable in 20 annual installments.
- 1922, October 6: Contract with Shasta View irrigation district for water right for 4,200 acres at \$34 per acre, payable in 20 graduated annual installments. Amended by contract of June 29, 1927, reducing acreage to 3,856 and extending repayment period to 40 years.
- 1922, October 24: Contract Ilr-174 with Sunnyside irrigation district for water right for approximately 789 acres at \$34 per acre, payable in 20 annual installments.
- 1927, June 6: Contract with Sunnyside irrigation district extending repayment period to 40 years.
- 1927, July 5: Contract with Malin irrigation district extending repayment period to 40 years.
- 1930, August 5: Contract with Shasta View irrigation district extending time for payment of delinquent charges and penalties.
- 1935, March 18: Contract with Enterprise irrigation district extending repayment period to 40 years. Ninety-two contracts with individual pumpers at \$34 per acre. Various dates. Payable in 40 graduated annual installments.
- 1948, August 20: Contract with Shasta View irrigation district adjusting repayment amount and schedule.
- 1955, December 21: Amendatory contract with Shasta View irrigation district to provide for inclusion of land.

¹ Decrease. Decreases are due to deferments under relief acts.

² Increase. Adjustment between divisions.

TULE LAKE DIVISION ¹

The Tule Lake division consists of former public lands and State lands. The State lands were ceded to the United States by the States of Oregon and California in 1905. The unwatering and the development for settlement of these lands which formerly were a part of the Tule Lake bed have been a gradual process since 1905. The unwatering of the lands and their protection from flooding have been accomplished by (a) construction of reservoirs upstream on the Lost River, (b) diver-

sion of Lost River flood flows to the Klamath River by means of a canal upstream from the lands in question, (c) pumping of water from Tule Lake, and (d) construction of Klamath Straits drain augmented by pumping plants to carry excess water from Lower Klamath Lake to the Klamath River. Because of the successful experience in reclaiming the lands by this process, the capacity of these works has been increased from time to time by additional construction so that additional areas could be brought under irrigation farming.

¹ Including 2,089.4 acres in Klamath irrigation district.

The Tule Lake division lands were opened for settlement under 11 different public notices and orders, the first of which was in 1922 and the last in 1948. About 44,000 irrigable acres making up 613 farm units have been homesteaded.

The first opening in 1922 (Public Notice No. 13) announced a construction charge of \$90 per irrigable acre. In 1923, Order No. 14 suspended Public Notice No. 13 pending a review of estimated construction cost chargeable to the project. Order No. 19 opening additional lands in 1927 notified the water users that the division would be operated on a water rental basis until a district was formed and a joint liability contract executed. This order also announced a construction charge

of \$88.35 per acre and explained its basis. The \$88.35 per acre charge was to apply if a district were organized and assumed the responsibility for operation and maintenance of the irrigation works. If no district were formed, the charge was to be \$100.55 per acre. Each subsequent public notice carried a clear statement of construction charges against the lands being opened (as did Public Notice No. 13), as well as provisions for the entryman to agree to the inclusion of his lands within an irrigation district.

The Tule Lake irrigation district was organized in 1952 and has entered into a repayment contract covering the lands within the Tule Lake division in the State of California. The contract was executed on September 10, 1956, after being specifically authorized in the act of August 1, 1956 (70 Stat. 799). With regard to the 41,695 irrigable acres already settled within the district, the contract provides for the payment of \$3,544,100 (\$85 per acre) in equal semiannual installments over a 40-year period, commencing January 1, 1957. The district's obligation is to be increased at the rate of \$85 per acre for any additional public lands which may be settled in the future. Tule Lake division lands (2,079 acres) in Oregon have a similar \$85 per acre repayment obligation which is to be collected by the Klamath irrigation district and paid to the United States in accordance with the joint liability contract of June 25, 1927, between the United States and the Klamath irrigation district. In accordance with the act of August 1, 1956 (70 Stat. 799), which authorized the Tule Lake irrigation district repayment contract, the Tule Lake division lands in both the Klamath and the Tule Lake irrigation districts are to share in a portion of future revenues accruing from the leasing of public lands in the Tule Lake division. During the time that construction charges are being paid but in no event after the year 2020, the sum of 30 percent annually of all net lease revenues received but not more than \$50,000 per year is to be credited on an equal per acre basis on the construction charges payable to the United States. After all construction charges are repaid, the water users will receive annually 10 percent of all net lease revenues. While the actual construction charge to be paid after the lease credits have been applied will depend in part upon

when and if additional lands are settled, the number of acres opened for settlement, and the amount of future annual lease revenues, it is estimated that the actual cash repayment by the water users will average from \$35 to \$50 per acre. The repayment of all Tule Lake division costs in excess of construction charges payable by the water users will be accomplished by the application of accumulated and future lease revenues or other credits due to the Tule Lake division. Lease and other revenues accumulated to June 30, 1956, approach \$7 million, and at present average about \$500,000 per year.

CONTRACTS

- Individual water-right applications for 2417.9 acres in California under Public Notice No. 13.
- Central Pacific Railroad Co. and Great Northern Railroad Co. for purchase of right-of-way, 293.6 acres at \$100.55 per acre.
- Fifteen contracts for permanent water rights from Lost River.
- Contract with Colonial Realty Co. covering exchange of Main division lands for Tule Lake division lands and purchase of water rights for 1,190 acres at cost of \$40,460.
- Contract with Tule Lake irrigation district, executed pursuant to Public Law 877, signed September 10 1956.

Modoc Unit.—The first monies appropriated for the construction of the Modoc unit of the Tule Lake division were included in the Interior Appropriation Act for fiscal year 1941. Since that time, additional funds have been appropriated annually and the total cost as of June 30, 1956, was \$7,234,221.

The Langell Valley irrigation district entered into a contract for the repayment of \$32,067 of costs as charged to Modoc unit for channelization of Lost River which granted them water for additional areas. Individuals also contracted for additional areas to be served from such channelization and agreed to repay \$78,923 as expended. In addition to these contracts, \$5,768,170 has been credited towards repayment of the cost of this unit which has been collected as agricultural lease revenues of areas within the drained area. This

application is in accordance with the 1941 appropriation act.

The remaining costs of the unit are to be repaid from lease revenues.

The Tule Lake irrigation district will assume operation and maintenance activities of the systems of this unit on January 1, 1957, in accordance with Contract 14-06-200-5954 dated September 10, 1956.

CONTRACTS

- 1917, November 30: Contract with Klamath drainage district for repayment of cost of investigations of practicability of reclaiming marsh lands and change in source of water supply for Van Brimmer drainage district. Obligation \$93,787, payable in 20 years.
- 1919, March 30: Contract Ilr-404 with J. W. Siemens for drainage. Obligation \$17,033, payable in 20 years.
- 1919, July 10: Contract Ilr-400 with Horsefly irrigation district for water supply from Bonanza Springs for 4,400 acres at \$6.50 per acre, payable in 20 years. Contract amended on October 12, 1922, by increasing acreage to 5,900.
- 1920, July 31: Contract Ilr-405 with Upper Van Brimmer drainage district for drainage. Obligation \$17,458, payable in 20 years.

1921, August 10: Contract with Geary Investment Co. for water supply from Upper Klamath Lake for 4193.74 acres at 25 cents per acre. Obligation \$1,048.44, payable upon execution of contract.

1921, August 24: Contract Ilr-402 with Klamath drainage district for water supply from Upper Klamath Lake. Obligation \$50,000, payable in 10 equal annual installments.

1923, July 10: Contract with California-Oregon Power Co. for purchase of power site. Obligation \$120,620, payable in 10 years.

1929, July 6: Contract with Klamath drainage district extending time for repayment under contracts of November 30, 1917, and August 24, 1921.

1943, April 28: Contract with Klamath drainage district adjusting obligation under 1917 contract to \$47,175 and rescheduling payments under 1921 contract. Contract approved by act of June 17, 1944 (ch. 261, 58 Stat. 279).

Also 32 contracts with individuals for purchase of water rights from Klamath River and Upper Klamath Lake.

LEWISTON ORCHARDS PROJECT

LEWISTON, IDAHO

Reconstruction of the Lewiston Orchards project was found feasible by the Acting Secretary on May 31, 1946, pursuant to the Reclamation Project Act of 1939 (53 Stat. 1187). However, before the Secretary's report was submitted to Congress, the Congress specifically authorized construction of the project by act of July 31, 1946 (50 Stat. 717). The authorizing act requires full reimbursement of project costs within a 50-year payout period. Purpose of the project is to provide adequate irrigation water for about 3,838 acres in Nez Perce County, Idaho, and a dependable domestic water system for about 4,000 people.

In 1906 a private company undertook diversion of water into a small reservoir and delivery of this water through wood-stave pressure pipelines. The water supply was augmented in 1915, 1922, 1934, and 1939 by providing for new diversions and by increasing the storage capacity. As a result of deterioration of the system, the Lewiston Orchards irrigation district was assisted by the Works Projects Administration during 1939 through 1941 in replacing wooden flumes with concrete bench flumes. This work was not completed.

Under the approved plan the Bureau reconstructed and enlarged the water system previously developed by local interests. The irrigation and domestic water systems were separated and a treatment plant was added to the latter system. Project facilities include diversion dams, feeder canals, storage reservoir, domestic water treatment plant (capacity 1,500,000 gallons per day), 300,000 feet of pipe for the domestic water system, and 300,000 feet of pipe for distribution of irrigation water.

Total estimated repayment obligation is \$2,500,000, of which \$1,438,393 is allocated to

irrigation and \$1,061,607 is allocated to domestic water. The total cost to June 30, 1957, was \$2,484,397.

A final cost notice has not been issued because one of the contractors is claiming additional compensation in the amount of \$14,500. A final notice will be issued when this question has been resolved.

The cost and repayment allocations:

Total project cost to June 30, 1957.....	\$2,484,397
Allocation of reimbursable costs:	
Irrigation.....	1,438,681
Domestic water supply.....	1,045,716
Repayment of reimbursable costs:	
From irrigation water users.....	1,438,681
From domestic water users.....	1,045,716
Total.....	2,484,397

Since the domestic water users are also the irrigation water users, the construction obligation is to be repaid in the same manner—50 equal annual installments.

Water was available during the time the system was reconstructed. At all times the system has been under operation of the district with operation and maintenance costs financed by assessment of water users.

Repayment contracts.—The Lewiston Orchards irrigation district concluded a contract with the Government on September 10, 1947, which provided for a maximum construction obligation of \$1,990,000, to be repaid in 50 successive annual installments for both the irrigation system and the domestic water system. This contract was amended on February 2, 1949, to increase the maximum obligation to \$2,500,000 and to allow a

development period of 5 years, during which time no irrigation construction assessments would be made. Repayment began on the domestic water system in 1954 and will be completed on all project works in 2008.

PUBLIC NOTICES AND CONTRACTS

1947, September 10: Contract with district for maximum construction obligation of \$1,990,000, payable in 50 successive annual installments.

1949, February 2: Contract Ilr-1502 changed maximum construction obligation to \$2,500,000 and extended the development period for irrigation from 3 to 5 years.

1952, May 2: Department notice allocating tentative project costs. Development period for irrigation begins January 1, 1953, and ends December 31, 1957. First payment due on irrigation on December 31, 1958. First installment on domestic water due December 31, 1953. Final cost notice to be issued at a later date.

LOWER YELLOWSTONE PROJECT

MONTANA-NORTH DAKOTA

Construction of Lower Yellowstone project, which includes Lower Yellowstone district No. 1 in Montana and Lower Yellowstone district No. 2 in North Dakota, was authorized by the Secretary of Interior on May 10, 1904, under the Reclamation Act of June 17, 1902.

The project works, developed to supply water to 9,349 acres of land, consist of a diversion dam in the Yellowstone River with a crest length of 800 feet and a hydraulic height of 4 feet; 71.6 miles of main canal with an initial capacity of 830 second-feet; 225 miles of laterals; 106 miles of drains and a pumping plant with a capacity of 45 second-feet to irrigate 2,300 acres.

Determination of cost and repayment obligation as of June 30, 1957:

Irrigation plant cost.....	\$3, 585, 928
Investigation cost.....	5, 603
Operation and maintenance funded.....	878, 383
Penalties funded.....	47, 529
	<hr/>
Total reimbursable.....	4, 517, 443
Less: Construction revenues.....	42, 986
Chargeoff, acts of May 25, 1926, and June 4, 1948.....	391, 789
Adjustments to be made.....	15, 226
	<hr/>
Total.....	4, 087, 894

Excess of repayment over costs.

The Lower Yellowstone districts established a board of control to operate the project. The United States transferred operation of the irrigation system to them on January 1, 1932.

Repayment contracts with Lower Yellowstone irrigation districts No. 1 and No. 2, dated September 23, 1926, provide that the districts shall pay to the United States a share of the construction cost based on the irrigable acreage within the district, with each acre of the irrigable chargeable for its share of construction. Provision was made in this contract for reduction in acres and of

charges, pursuant to the act of May 25, 1926 (44 Stat. 636), in which case neither such acres nor the irrigation district would be chargeable therefor.

Pursuant to act of June 4, 1948 (62 Stat. 336), amendatory agreements were executed on May 6, 1952, and June 7, 1952, under which district No. 1 repayment contract is decreased by \$3,533 and district No. 2 is decreased by \$6,002 due to decrease in irrigable land.

PUBLIC NOTICES AND CONTRACTS

- 1908, December 21: Public notice. Construction charge \$42.50 per acre, payable in 10 equal annual installments.
- 1912, March 1: Public notice. Construction charge raised to \$45 per acre, payable in 10 graduated annual installments.
- 1920, December 10, and 1921, March 9: Contracts with Lower Yellowstone irrigation district No. 1 and Lower Yellowstone irrigation district No. 2, respectively, under which districts agree to pay construction cost of project in 20 graduated annual installments. Operation and maintenance deficit and certain other costs designated as supplemental construction to be paid in additional installments after 20-year repayment period.
- 1923, May 24: Contract with town of Savage, Mont. for annual water service charge of \$72.
- 1926, September 23, and November 2, amended May 6, and June 7, 1952: Contracts with Lower Yellowstone irrigation district No. 1 and Lower Yellowstone irrigation district No. 2, respectively. Contracts provide for additional construction work and for funding of delinquencies. Repayment of construction charges to be made on crop-production basis, annual installments to be 5 percent of average gross annual acre income for 10 preceding years. Payout period indefinite.
- 1945, September 17: Contract with city of Sidney, Mont., for annual water service—annual water service charge \$200. Also provides for payment of \$700 at rate of \$100 per year for past due payments under previously canceled contract.
- 1945, October 8: Contract with town of Fairview, Mont., for water service—annual water service charge \$200.

RECLAMATION REPAYMENTS

Also provides for payment of \$1,997 at rate of \$100 per year for past due payments under previously canceled contract.

The summary of status of repayment contracts as of June 30 1957:

Total value of contracted repayment-----	\$4, 087, 894
Total matured charges-----	2, 519, 871
Total matured charges repaid-----	2, 474, 071
Total matured charges unpaid-----	¹ 45, 800

¹\$45,800 due June 30, 1957, paid July 1, 1957.

¹ Operation and maintenance by the board of control, for the Lower Yellowstone irrigation districts Nos. 1 and 2, since 1932.

MANCOS PROJECT

MANCOS, COLO.

The Mancos project, located in Montezuma County in southwestern Colorado, was approved by the President on October 24, 1940, under provisions of the Water Conservation and Utilization Act of August 11, 1939 (53 Stat. 1418), as amended. Authority to amend the Mancos project contract to provide increased reimbursability is contained in the act of June 25, 1947 (61 Stat. 176).

The project works consist of Jackson Gulch Dam and Reservoir on an offstream side, an inlet canal from West Mancos River of 250 second-feet capacity, and an outlet canal of 200 second-feet capacity leading to West Mancos River. Water provided by the project works will ultimately furnish a supplemental supply for 7,872 acres now inadequately irrigated and a full supply for 1,128 acres of irrigable land not now irrigated. The project also provides a water supply for Mesa Verde National Park and additional water for the town of Mancos, Colo.

The total cost of constructing the project features was \$3,914,818. Contracts have been executed with the Mancos water conservancy district for repayment of the reimbursable construction cost.

The features constructed by the United States are being operated by the Bureau of Reclamation with funds advanced by the water users.

Repayment obligation ¹	900, 000

¹ Pursuant to act of June 25, 1947 (61 Stat. 176).

Repayment contracts.—The original repayment contract with the Mancos water conservancy district was signed July 20, 1942. An amendatory contract dated December 22, 1947, increases the repayment obligation and extends the repayment period. First payment is due and payable on or before December 31, 1954.

CONTRACTS

- 1942, July 20: Contract IIR-1384 with Mancos water conservancy district for repayment of \$600,000 in 40 successive equal annual installments.
- 1947, December 22: Amendatory contract IIR-1384 with the Mancos water conservancy district which increases the repayment obligation of the district from \$600,000 to \$900,000 and increases the repayment period from 40 to 60 successive equal annual installments.

MICHAUD FLATS PROJECT

AMERICAN FALLS, IDAHO

The Michaud Flats project was authorized by Congress on August 31, 1954 (68 Stat. 1062).

The project is located in Power County in southern Idaho. The plan of development is to lift storage water from American Falls Reservoir which, together with pumped ground water, will be distributed to 11,240 acres, most of which was previously devoted to grazing and dry land wheat production. Under irrigation, project lands are expected to be used primarily for the production of general crops, row crops and livestock. The principal project features consist of American Falls pumping plant and appurtenant works; two main canals; about 30 wells and associated ground-water pumping installations; and a distribution system that will include service under pressure for sprinkler irrigation of the project classified as sprinkler land.

The current estimated construction cost of the project works is \$5,124,000 and includes reservoir water supply costs apportioned to the district for repayment of \$103,200 for American Falls Reservoir and \$368,100 for Palisades Reservoir. Of this total estimate, \$2,700,000 is to be repaid by the district and \$2,424,000 is to be repaid from net power revenue from Palisades powerplant. The district's construction cost obligation may be lowered if the actual reimbursable construction costs of Palisades project are less than the current estimated cost. However, the cost assigned to the district from the Palisades project shall not be less than \$316,975.

The United States will operate the project facilities during the construction period. At the time the development period notice is issued the Secretary may, by written notice, transfer the project facilities to the Falls irrigation district for

operation and maintenance. Construction of project facilities started in fiscal year 1956.

Repayment contract.—The repayment contract with the district, dated December 9, 1955, provides for repayment to the United States the estimated construction cost obligation of \$2,875,000. This obligation includes the water supply cost for Palisades Reservoir in the amount of \$368,100, which may be reduced to a minimum of \$316,975. The final construction cost obligation will be adjusted to reflect the final water supply cost in Palisades Reservoir.

Annual installments shall be determined by applying the "normal and percentage" variable repayment plan. The district, in collecting this annual charge from the water users, shall distribute the assessment by land classes according to relative productivity. Land classes have been assigned to four pay classes with the best lands paying 100 percent and other lands paying lesser rates of 72 percent, 36 percent, and 8 percent, respectively. A development period of 10 years has been allowed for the project lands.

CONTRACT

1955, December 9: Contract 14-06-100-851 with Falls irrigation district to repay an amount not to exceed \$2,875,000 in 50 annual installments. The first installment to be due the first calendar year following the close of a 10-year development period. Each annual installment to be due and payable one-half on September 15 of the year for which it is applicable and one-half on the succeeding June 30.

MIDDLE RIO GRANDE PROJECT

ALBUQUERQUE, N. MEX.

The comprehensive plan for the Middle Rio Grande project was approved by the Flood Control Act of June 30, 1948 (54 Stat. 1171). Completion of the approved plan was authorized by the Flood Control Act of May 17, 1950 (64 Stat. 163). The project extends along the Middle Rio Grande Valley from the Colorado-New Mexico boundary south to the backwaters of Elephant Butte Reservoir and includes rectification of the Rio Grande in the vicinity of Truth or Consequences, N. Mex.

The comprehensive plan was designed to improve and stabilize the economy of the Middle Rio Grande Valley by rehabilitation of the Middle Rio Grande conservancy district and by controlling sedimentation and flooding. The plan was developed jointly by the Bureau of Reclamation and the Corps of Engineers in cooperation with other Federal, State and local agencies. The Corps of Engineers was authorized to construct two dams for flood and sediment control, and levees for local flood protection. The Bureau of Reclamation was authorized to perform the following actions: Irrigation and project rehabilitation of the Middle Rio Grande conservancy district, including acquisition of district lands, rehabilitation of El Vado Dam and diversion dams, drainage rehabilitation and extension, and channel rectification on the Rio Grande. The water right irrigable area of the project is 121,680 acres.

The total estimated cost of work to be accomplished by the Bureau of Reclamation is \$32,837,243, including bond acquisition costs to the United States of \$5,300,000 and to the dis-

trict of \$1,140,243. Cost of irrigation and drainage rehabilitation on non-Indian lands will be repaid by the water users; cost of participation by Indian lands will be nonreimbursable. Costs of work to be done by the Bureau of Reclamation are tentatively allocated as follows:

Reimbursable by water users.....	¹ \$16, 880, 243
Nonreimbursable Indian land participation and basic water supply data.....	2, 307, 000
Channel rectification, Rio Grande....	13, 650, 000
Total.....	32, 837, 243

¹ Of this amount, \$1,140,243 was paid by water users for bond acquisition; therefore, is excluded from the repayment contract.

CONTRACTS

- 1951, September 24: Contract 178r-423 with Middle Rio Grande conservancy district for the rehabilitation and construction of project works and repayment of reimbursable costs over a 40-year period following completion of construction.
- 1953, June 19: Amendment No. 1 deleted a portion of the contract to conform to the opinion of the Supreme Court of the State of New Mexico, filed May 11, 1953.
- 1955, January 4: Amendment No. 2 established date for the Bureau of Reclamation to assume operation and maintenance of district works except El Vado Dam and Reservoir.
- 1956, May 22: Amendment No. 3 provided for the Bureau of Reclamation to assume operation and maintenance of El Vado Dam and Reservoir.

Payout schedule.—Under terms of the repayment contract, the maximum allowable value of the water users' obligation is equal to the sum of the maximum allowable obligation of \$10,440,000 for rehabilitation of irrigation facilities and the cost of \$5,300,000 to the United States for ac-

quisition of bonds. This total of \$15,740,000 will be partially liquidated by collections from the Conservancy District during the construction period which are estimated to total \$1,600,000. The remaining estimated balance of \$14,140,000 is to be repaid in 40 consecutive equal annual installments, which are expected to commence in 1961.

MILK RIVER PROJECT

MALTA, MONT.

The Milk River project investigations began in August 1902, leading to the authorization of the project by the Secretary of the Interior on March 14, 1903. The St. Mary storage unit was authorized by the Secretary of the Interior on March 25, 1905, and construction began July 27, 1906. The first water for irrigation was delivered for the season of 1911. Nelson, St. Mary, and Swift Current Dams were completed in 1915, Vandalia Dam in 1921, and Fresno Dam in 1939. Fresno Dam and Reservoir, formerly called Chain Lakes Dam and Reservoir, was constructed under the National Industrial Recovery Act and approved by the President in August 1935 pursuant to the acts of June 25, 1910 (36 Stat. 835), and December 5, 1924 (43 Stat. 672). The Dodson pumping unit was approved by the President on March 17, 1944, under the Water Conservation and Utilization Act of August 11, 1939.

The Milk River project, located in Blaine, Glacier, Phillips, and Valley Counties, Mont., provides for storage of water from St. Mary River in Sherburne Lakes and its diversion through a 29-mile canal, discharging into the North Fork of the Milk River. It then flows through Canada for 216 miles before returning to the United States. Milk River water is stored in Fresno Reservoir, located 17 miles west of Havre, Mont., and in Nelson Reservoir, 19 miles northeast of Malta. The water is diverted from Milk River near Chinook and Harlem into canals on each side of the river for land in that area comprising the Chinook division. Near Dodson two canals divert water for irrigating land near Dodson, Wagner, Malta, and Bowdoin. The south canal conveys water into Nelson Reservoir. From this storage, land is irrigated on the south side of the Milk River and Beaver Creek near Saco and Hinsdale, comprising the Malta division. At Vandalia Dam, a canal on the south side of the Milk River carries water for the irrigation of land

near Tampico, Glasgow, and Nashua, comprising the Glasgow division. Land is also irrigated by pumping above the level of the gravity system along the Milk River Valley. The Dodson pumping unit elevates water from the Dodson north canal to irrigate additional lands above the gravity system.

The operation of storage facilities is by the Bureau of Reclamation with funds advanced by the water users.

The three storage reservoirs have a capacity of 280,700 acre-feet. The length of the distribution works is as follows: main canals, 199 miles; laterals, 248 miles; and drains, 177 miles.

CHINOOK DIVISION

Except for storage facilities, all water supply and distribution works were constructed and are operated and maintained by the five irrigation districts that comprise the Chinook division. These irrigation districts are: Fort Belknap, Alfalfa Valley, Paradise Valley, Zurich, and Harlem. Water is diverted near Lohman for the Fort Belknap, Alfalfa Valley, and Zurich irrigation districts and southeast of Chinook for the Paradise Valley irrigation district. An electric pumping plant east of Zurich furnishes water for the Harlem irrigation district.

Each of the districts has contracted for water from Fresno Reservoir. Each of the five districts of the Chinook division executed contracts with the United States for repayment of its proportionate share of the St. Mary joint works amounting to a total of \$585,202, to be repaid in 80 equal semiannual installments, the first of which was due December 31, 1932. However, payments on temporarily unproductive (class 5) land were suspended until such time as the Secretary of the Interior transfers the class 5 land to the pay class and so notifies the district involved. This obligation was reduced to \$532,743 with a corresponding

per acre obligation reduction from \$14.05 to \$12.79 from an adjustment to costs made on December 31, 1952, which reduced also the annual installments beginning in 1953. The adjusted obligations of the various districts and adjusted annual payments due, exclusive of payment on suspended land, are as follows:

Irrigation district	Total obligation	Scheduled annual installment	Year of final payment
Fort Belknap.....	\$98, 192	\$1, 147	1976
Alfalfa Valley.....	46, 725	1, 089	1976
Zurich.....	109, 807	2, 142	1976
Harlem.....	147, 361	2, 674	1976
Paradise Valley.....	130, 658	2, 104	1976
Total.....	532, 743		

None of the originally suspended (class 5) land has been transferred to the pay class, and consequently no repayment for this land has been scheduled.

Each of the five irrigation districts has contracted for a supplemental water supply from the Fresno Reservoir and assumed its proportionate share of the cost. The obligation of each participating district was fixed at \$25.95 per acre of classes 1 to 4 land and was scheduled for repayment in 80 semiannual installments, the first 40 of which were at the rate of \$0.25 per acre and the last at slightly less than \$0.40 per acre. District obligations and scheduled annual installments for Fresno Reservoir are as follows:

Irrigation district	Contract	Obligation	Annual payment		Year last payment due
			First 20 years	Second 20 years	
Fort Belknap.....	Ilr-909.....	\$99, 228	\$1, 912	\$3, 050	1984
Alfalfa Valley.....	Ilr-138.....	94, 260	1, 840	2, 873	1984
Zurich.....	Ilr-666.....	185, 410	3, 615	5, 655	1984
Paradise Valley.....	Ilr-665.....	182, 080	3, 550	5, 554	1984
Harlem.....	14-06-W-75.....	231, 422	4, 459	7, 112	1994
Total.....		792, 400			

Payments on St. Mary storage began in 1937, as prior installments were deferred, and in 1944 on Fresno contracts. Payments matured to June 30, 1957, on St. Mary storage total \$212,030 and on Fresno storage \$159,054.

Rehabilitation and betterment contracts.—Rehabilitation of the St. Mary storage works has become necessary, and contracts have been negotiated establishing an obligation of \$134,851 for this work.

Agreements executed by the 5 districts on May 18, 1949, provide for repayment of the 1949 rehabilitation costs of \$13,703 in 5 equal annual installments beginning in 1962.

Contracts covering the 1950 appropriations were executed by the 5 districts on February 14, 1950, and later amended to include appropriations for the years 1952 to 1957. These contracts were in the amount of \$121,148 and provide for the repayment of rehabilitation and betterment expendi-

¹ Operation and maintenance on everything but joint works was turned over to the districts in 1954.

DODSON PUMPING UNIT

The Dodson pumping unit was constructed at a cost of \$125,372.87. The district has an obligation of \$80,500¹ as its proportionate part of the cost of existing works, including Fresno Dam as well as the Dodson pump facilities. A contract between the Dodson irrigation district and the United States was entered into on June 1, 1945, for repayment of the reimbursable portion under authority of the Water Conservation Utilization Act of August 11, 1939 (53 Stat. 1418).

The first installment of 80 semiannual installments of construction charges was due on December 31, 1955.

Payable	Amount payable
First 10 installments	\$250
Second 10 installments	600
Next 60 installments	1, 200

Construction charge obligation consists of (a) \$50,280 (1,005.6 irrigable acres at \$50 per acre) for the cost of previously existing works; (b) \$30,220 for the reimbursable cost of additional works.

¹ Change due to adjustment of contract Ilr-1438 per letter dated January 6, 1955 from acting assistant commissioner. The obligation is based on irrigable acreage of 1,005.6 acres within the district and is in accordance with the terms of the contract.

¹ Dodson pumping unit—Operation and maintenance of this unit is performed by the Malta irrigation district with funds advanced by the water users.

² Operation and maintenance on everything but joint works was turned over to the districts in 1954.

FRESNO STORAGE DIVISION

The Fresno Dam and Reservoir were constructed to furnish supplemental water to the irrigation districts of the Milk River project.

The obligation has been assumed by six irrigation districts, the Office of Indian Affairs, towns, corporations, and individual contractors. When the sale of the entire amount of Fresno storage water has been completed, the cost will have been oversubscribed, and a downward adjustment in the obligation of irrigation water users is anticipated. Payments on Fresno contracts began in 1944 and on June 30, 1957, a total of \$383,554 had been paid. The works are operated by the United States with funds advanced by the irrigation districts.

In addition to the Chinook division tabulated above, the obligation for repayment is as follows: individuals, corporations, etc., \$328,190, with annual payments of \$8,435 tapering off to \$1,876 and ending in 1992; Bureau of Indian Affairs, \$250,000 with annual payments of \$6,250. The Fresno obligation of the Malta and Glasgow divisions is included in the amendatory contracts and totals \$272,643 for the Glasgow division and \$649,524 for the Malta division.

¹ Decrease. Deferments under relief acts. 1945—Malta and Glasgow district installments deferred under act of Aug. 4, 1939, \$17,700.

² Includes levy and billing to Bureau of Indian Affairs (\$31,250).

³ Adjustment of \$40,000 due to obligation on Contract No. Ir-955 dated Mar. 9, 1937, with USDA, Biological Survey, was taken up on books in 1955.

⁴ The \$124,390 reduction is due to adjustment in the accruals, \$87,612 on Malta and \$36,778 on Glasgow, on account of the amendatory contracts with the Malta and Glasgow irrigation districts dated Sept. 10, 1952.

⁵ This total will be increased by the share of payments attributable to Fresno Reservoir from Malta and Glasgow districts and the city of Havre.

² \$934 deleted from books of account. Uncollectible.

MALTA AND GLASGOW DIVISIONS

Works serving the Malta and Glasgow irrigation districts are operated by the United States with funds advanced by the water users.

Difficulty had been encountered in meeting the terms of previous contracts. All construction payments due prior to June 1937 were deferred, and several more were deferred subsequently. To June 30, 1952, \$609,404 had become due and \$388,723 had been paid on contracts. By June 30, 1952, \$124,390 had become due on Fresno Dam contract, but no payment had been made. Because of these difficulties, a land reclassification was made in 1947, and economic investigations were made leading to a sound repayment plan. Amendatory repayment contracts, negotiated pursuant to section 7 of the Reclamation Project Act of 1939 (53 Stat. 1187), executed by the districts and confirmed by the court (Malta, March 6, 1951; and Glasgow, October 1, 1951) were approved by act of Congress June 23, 1952 (66 Stat. 151), and executed by the Secretary of the Interior on September 10, 1952. These amendatory contracts combined the obligations under the several former contracts including

Fresno storage costs into a single obligation for each district.

The total remaining obligation as restated in the amendatory contract with the Glasgow district was \$1,588,801 as of December 31, 1949. This was the balance remaining after applying \$117,898 of previous water user payments and revenue credits on the district's overall obligation of \$1,706,699. The obligation of the Malta district as of December 31, 1949, as restated in its amendatory contract was \$3,662,165, which was the balance remaining after applying \$381,945 of previous payments and revenue credits on the district's overall obligation of \$4,044,110.

The consolidated obligations in the Malta and Glasgow contracts include the share of these districts in the rehabilitation of the St. Mary's storage works amounting to \$175,150 plus \$550,000 for the rehabilitation of irrigation distribution facilities specific to the 2 districts. The annual payment for the Glasgow district is \$10,500 and the Malta district \$24,000. One-half of the annual payments is due semiannually and began in 1950. The estimated period for repayment commencing in the year 1950 is 116 years for the Glasgow district and 106 years from 1950 for the Malta district. The estimated length of payout period may vary because of credits for any net profits from the sale, rental, or use of grazing lands, farm lands, or townsites, as provided in section 28 of the amendatory contract. Section 14 provides for increasing the basic annual installments if lands are transferred from classes 5 to 6 to paying class or classes. There are 28,656 acres of class 5 land on the Malta district and 7,173 acres on the Glasgow district. A considerable portion of this class 5 land is expected to be transferred to pay classes due to development work under way on the project. The addition of new lands to the districts will also increase the basic annual installments and affect the period of time for payout.

The amount of annual installments may be adjusted to conform to economic conditions under a variable formula, as provided by the contract.

 Sale of Fresno water—Contract 179r-1608, city of Havre, 33 years at \$5,000 per year.

MINIDOKA PROJECT

BURLEY, IDAHO

The Minidoka project was authorized by the Secretary under the Reclamation Act of 1902 (32 Stat. 388) on April 23, 1904, and approved by the President on January 5, 1911, in accordance with the act of June 24, 1910 (36 Stat. 836). The Gooding division, originally called Gravity Extension unit, was found feasible by the Secretary on July 2, 1928, and approved by the President on July 3, 1928, pursuant to section 4 of the act of December 5, 1924 (43 Stat. 702).

The Upper Snake River division, originally called Upper Snake River storage project, was found feasible by the Secretary on September 6, 1935, and approved by the President on September 20, 1935, pursuant to the acts referred to in the above paragraph.

The North Side pumping division and the American Falls powerplant were authorized by the act of September 30, 1950 (Public Law 864, 81st Cong.).

As initially developed, the facilities of the Minidoka project included Minidoka Dam, a combined power production, storage, and diversion structure south of the railroad town of Minidoka, Idaho; Jackson Lake Dam and Reservoir, near the headwaters of the South Fork of the Snake River in northwestern Wyoming; and canal and lateral systems of the Gravity and South Side pumping divisions in Cassia and Minidoka Counties, Idaho. Subsequent developments included the raising of Jackson Lake Dam (1913-16) to increase the storage capacity of Jackson Lake Reservoir to 847,000 acre-feet; the dredging of the river channel below the outlet of Jackson Lake; the construction of American Falls Dam (1921-25) with 1,700,000 acre-feet of storage space; construction of the Gooding division (1927-48), Upper Snake River division (1935-40), and the North Side pumping division, which is now in the construction stage.

In 1955 the project furnished full water supplies to some 234,500 irrigable acres and supplemental supplies to some 861,000 irrigable acres.

Most of the power and energy generated on the project during the irrigation season is used for irrigation pumping. Year-around power available from the Boise project together with a block of power available from Palisades project during the irrigation season enables the project to supplement its own nonirrigation season generation to serve seventeen commercial customers and minor project uses.

AMERICAN FALLS RESERVOIR DIVISION

This division consists of the American Falls Dam and Reservoir, which are operated as reserved works by the United States for the benefit of the Minidoka project. Operation and maintenance is financed 93 percent by funds advanced by the water users and 7 percent from appropriated funds.

Repayment contracts.—Thirty-five irrigation districts, companies, and individuals have contracted for the purchase of 1,202,586 acre-feet of the total of 1,700,000 acre-feet capacity of the reservoir. These repayment contracts amount to \$5,312,160, of which \$4,825,271, or 91 percent, has become due and paid on June 30, 1957. In addition, the cost of 400,000 acre-feet of storage capacity in the reservoir has been contracted for by the Gooding division, the repayment of which is included in the Gooding division section of this report. The cost of 23,300 acre-feet of storage space is under contract to the Falls irrigation district (Michaud Flats project). The balance of the storage space or 74,114 acre-feet is allotted to new divisions of the project now under construction or other contracts pending. A portion of the cost of the American Falls Dam (\$293,978) is allocated to future power development.

CONTRACTS

- 1922 to 1926: Twenty-five irrigation districts, companies, and individuals entered into contracts for 735,321 acre-feet of storage and advanced a proportionate share of the estimated construction cost of the reservoir prior to and during the source of construction.
- 1927, February 11: Contract IIR-115 with Minidoka irrigation district for purchase of 50,000 acre-feet, payable in 60 equal semiannual installments.
- 1927, September 21: Contract with American Falls Reservoir district No. 2 for purchase of 400,000 acre-feet, payable in 80 equal semiannual installments.
- 1931, June 30: Contract IIR-168 with American Falls Reservoir district No. 1 for purchase of 20,000 acre-feet, payable in 10 installments.
- 1932, May 5, and 1933, May 1: Contracts 12R-1173 with Aberdeen-Springfield Canal Co. for purchase of 2,086 acre-feet, payable at time of purchase.
- 1934, 1938, and 1942: Contracts with Enterprise irrigation district for purchase of 12,000 acre-feet, payable at time of purchase.
- 1938, April 1: Contract IIR-659 with Rudy Irrigation Canal Co. for purchase of 2,000 acre-feet, payable at time of purchase.
- 1952: Twenty-two irrigation districts and companies contracted for 276,905 acre-feet of storage space pursuant to Public Law 864, 81st Congress, under a 10-year payment period.
- 1955, January 7: Contract 14-06-W-92 with Milner low lift irrigation district for 11,574 acre-feet of storage space under Public Law 864, 81st Congress, payable in 10 equal installments.
- 1955, December 9: Contract with Falls irrigation district for repayment of cost of Michaud Flats project, including cost of 23,300 acre-feet of capacity in American Falls Reservoir, over a repayment period of 50 years. Act of August 31, 1954 (68 Stat. 1062).
- 1957, April 25: Memorandum of agreement with Bureau of Indian Affairs (Fort Hall Indian Agency) for repayment of \$211,310 for 47,700 acre-feet of space in American Falls Reservoir. Repayment to be on nonappropriation cost transfer basis.

Cost and repayment allocations:

Original construction costs.....	\$7, 692, 547

Total matured charges.....	4, 825, 271
Total matured charges repaid.....	4, 825, 271
Total matured charges unpaid.....	0

GOODING DIVISION

The American Falls Reservoir district No. 2 operates and maintains the irrigation system of the Gooding division, servicing about 98,500 irrigable acres. The United States operates the storage system as reserved works. Water for this division is diverted at Milner Dam into the Milner-Gooding canal.

Repayment contracts.—The main contract between the United States and American Falls Reservoir district No. 2 was made September 21, 1927. This contract was modified by the interim amendatory contract of December 7, 1948, wherein provision was made to apportion the construction costs on the basis of water-supply benefits. The contract was further modified by amendatory contract of October 14, 1955. The contract of October 14, 1955, states the final repayment obligation of the district, including cost of 400,000 acre-feet of storage space in American Falls Reservoir, and the apportionment of this obligation between the "old and river-right" lands and the "new" lands of the division.

Determination of repayment obligation of the Gooding division:

Total cost.....	\$6, 608, 381
Interest and penalties.....	1, 990
Other charges funded.....	75, 008
Total cost.....	6, 685, 379
Less: Construction revenues.....	61, 508
Total repayment obligation.....	6, 623, 871

The status of repayment contracts as of June 30, 1957 is as follows:

Total value of contracted repayment.....	\$6, 623, 871
Total matured charges.....	3, 867, 803
Total matured charges repaid.....	3, 867, 803
Total matured charges unpaid.....	0

¹ Increase in obligations covers sales of storage space to contractors.² Decrease. Decrease covers amounts deferred under relief acts.³ Moratorium period. Acts of Apr. 1, 1932, Mar. 3, 1933, Mar. 27, 1934, June 13, 1935, and Apr. 14, 1936. Construction charges deferred for years 1932, \$4,839; 1933, \$10,528; 1934, \$11,092; 1935, \$11,656; 1936, \$6,110.⁴ Charges deferred under acts of August 21, 1937, May 31, 1939, and August 4, 1939, for years 1937, \$23,783; 1938, \$23,783; 1939, \$23,783; 1940, \$23,783; and 1941, \$23,783.

PUBLIC NOTICES AND CONTRACTS

- 1927, September 21: Contract with American Falls Reservoir district No. 2 for construction of the Gravity extension unit of the Minidoka project.
- 1933, April 13: Public notice. Construction charges estimated at \$85 per acre, payable in 40 years.
- 1944, December 30: Public notice. Announcing repayment provision of "new lands" on estimated basis, and availability of water.
- 1947, March 11: Public notice. Announcing availability of water to new lands and 40-year repayment period on estimated cost of \$90 per acre.

- 1948, September 14: Public notice. Announcing availability of water to new lands and 40-year repayment period on estimated cost of \$115 per acre.
- 1948, December 7: Contract with American Falls Reservoir district No. 2 provided for apportionment of water and costs among various types of land and established a limitation as to new lands.
- 1955, October 14: Contract states final repayment obligation of the district including cost of 400,000 acre-feet of storage space in American Falls Reservoir, the apportionment of this obligation between old and river-right lands and new lands, and provisions for repayment.

¹ Moratorium period. Acts of Apr. 1, 1932, Mar. 3, 1933, Mar. 27, 1934, June 13, 1935, and Apr. 14, 1936. Construction charges deferred for calendar years 1932, \$90,332; 1933, \$176,685; 1934, \$176,685; 1935, \$176,685; 1936, \$88,342. Deferred under acts of Aug. 21, 1937, May 31, 1939, and Aug. 4, 1939, for years 1937, \$88,342; 1938, \$88,342; 1939, \$88,342; 1940, \$88,342; 1941, \$88,342.

² Adjustment in obligation covers decrease in estimated cost.

³ Decrease. Decrease covers amounts deferred under relief acts.

⁴ Decrease. Decrease covers amount transferred to North Side pumping division.

GRAVITY DIVISION

The Gravity division covers some 72,000 acres of irrigable lands in the Minidoka irrigation district on the north side of the Snake River. The individual water users have contracted to repay \$2,846,896 on the construction cost. Repayments commenced in 1908 and on June 30, 1957, \$2,816,274, or 99 percent, had become due. On that date, \$2,815,229 had been paid. The balance of \$1,045 covers delinquencies of a few individuals.

The irrigation system has been operated by the Minidoka irrigation district since the year 1916, and the reserved works of the Minidoka project, comprising storage reservoirs, are operated by the United States.

Power credits from the plant at Lake Walcott due the Gravity division are applied annually on the obligation for American Falls storage water.

Repayment contracts.—Repayment contracts on the Gravity division are with the individual water-users based on the repayment provisions of the public notices. There were originally about 2,000 of these individual contracts, of which approximately 100 are not yet paid out. These contracts generally provide for a 20-year payout period of a \$42 per acre construction charge. The Minidoka irrigation district has assumed liability for repayment of the cost of 50,000 acre-feet of storage space in American Falls Reservoir, as distinguished from the individual water-user's liability for repayment of other project charges.

¹ Decrease. Decreases are due to cancellation of water-right applications and to funding of delinquent charges. 1912 adjustment under 1911 public notice. 1914 Reclamation Extension Act, Aug. 13, 1914.

² Moratorium period. Acts of Apr. 1, 1932, Mar. 3, 1933, Mar. 27, 1934, June 13, 1935, and Apr. 14, 1936. Total amount deferred calendar years 1931 to 1936, \$383,797.

PUBLIC NOTICES AND CONTRACTS

1907, March 9: Public notice. Construction charge \$22 per acre, payable in 10 equal annual installments.

1909, March 30: Public notice. Construction charge \$30 per acre, payable in 10 equal annual installments.

1910, November 25: Public notice. Construction charge \$40 per acre on private and school lands, payable in 10 equal annual installments.

1911, December 30: Public notice. Construction charge increased to \$30 for all lands and installments

graduated. Private land applied for after 1 year, rate \$40 per acre.

- 1916, October 2: Public notice. Supplemental construction of drainage works, rate, \$12 per irrigable acre, payable along with regular construction charges.
- 1916, December 2: Contract with Minidoka irrigation district for taking over operation and maintenance of irrigation system.
- 1927, February 11: Contract Ilr-115 with Minidoka irrigation district for purchase of 50,000 acre-feet of American Falls storage space, 7,000 acre-feet of Jackson Lake storage space, allowance of power credits and other benefits.
- 1929, March 19: Contract with Minidoka irrigation district for purchase of additional 810 acre-feet of Jackson Lake storage space to be paid from power profits.
- 1932, May 21: Supplemental to contract of December 2, 1916, reducing interest rate from 10 to 6 percent.
- 1936, March 2: Supplemental to contract of February 11, 1927, extending repayment period from 10 years to 60 years.

The status of the Gravity division repayment contracts as of June 30, 1957, is as follows:

Total value of contracted repayment.....	\$2, 846, 896
Total matured charges.....	2, 816, 274
Total matured charges repaid.....	2, 815, 229
Total matured charges unpaid.....	1, 045

JACKSON LAKE RESERVOIR

Nineteen irrigation districts, canal companies, and individuals have contracted to repay a total of \$1,254,433 for the purchase of water from Jackson Lake Reservoir. All of this amount had become due on June 30, 1946, and had been paid to the United States. A large portion of the \$1,366,871 total cost of Jackson Lake Dam was advanced by the Twin Falls Canal Co. and the Kuhn Irrigation & Canal Co. prior to construction. The United States retains title and operates

¹ Moratorium period. Acts of Apr. 1, 1932, Mar. 3, 1933, Mar. 27, 1934, June 13, 1935, and Apr. 14, 1936. Construction charges deferred for calendar years 1931, \$4,383; 1932, \$5,011; 1933, \$4,135; 1934, \$4,135, and 1935, \$4,135; and 1936, \$2,068.

² Decrease. Decrease covers amounts deferred under relief acts.

³ Increase. Increase covers payment made by Kuhn irrigation district under contract Ilr-494 dated Feb. 25, 1913, that has been accounted for as a contribution until fiscal year 1957.

Jackson Lake Dam and Reservoir, as well as American Falls Dam and Reservoir, as storage and control facilities on the Snake River for the benefit of project lands. Operation and maintenance is financed from both advanced and appropriated funds.

CONTRACTS

- 1917: 16 irrigation districts, canal companies, and individuals, entered into contracts for 62,000 acre-feet of storage, cost payable in 10 equal annual installments. Two contractors later secured extension to 20 years.
- 1926, March 25: Contract with Burley irrigation district for purchase of 50,000 acre-feet, payable from power profits.
- 1927, February 11: Contract Ilr-115 with Minidoka irrigation district for purchase of 7,810 acre-feet payable from power profits.

NORTH SIDE PUMPING DIVISION

The North Side pumping division is located in Minidoka and Jerome Counties, north of the Snake River in south-central Idaho. The division was authorized for construction by act of September 30, 1950 (64 Stat. 1083). The project plan includes the construction of facilities to irrigate 67,100 acres of public land by ground water pumping, and facilities to pump from the Snake River to 13,650 acres, for which 47,593 acre-feet of storage space in American Falls Reservoir and 90,000 acre-feet of storage space in Palisades Reservoir have been reserved. As of June 30, 1956, water has been made available to 26,651 acres of land.

Repayment contracts.—Total cost of the division is estimated to be \$11,395,000, including \$71,000 transferred from American Falls Reservoir and \$810,000 transferred from Palisades Reservoir for storage space. No repayment contracts are in effect due to the fact that no irrigation district has yet been formed on the division. Each homestead entryman is required to execute an "Interim Repayment Contract" which provides for a repayment period of 50 years. The irrigation system is presently operated by the United States.

PUBLIC NOTICES AND CONTRACTS

— Recordable and interim repayment contract—each homestead entryman is required to execute a contract providing for payment of operation and maintenance charges in advance; a 50-year repayment

period for construction charges; and agreement to form and become a party to an irrigation district to operate the irrigation system.

- 1953, April 6: Public Notice No. 44 announcing availability of water to 7,289 acres and opening these lands to homestead entry.
- 1954, March 5: Public Notice No. 45 announcing availability of water to 8,894.3 acres and opening these lands to homestead entry.
- 1955, February 7: Public Notice No. 46 announcing the availability of water to 10,467.5 acres of public lands and opening these lands to entry.

SOUTH SIDE PUMPING DIVISION

Distribution facilities, including pump lifts, to serve some 48,000 irrigable acres have been operated by the Burley irrigation district since 1926. Storage and power facilities are operated by the United States as reserved works. Operation and maintenance of the reserved works is financed from funds advanced by the irrigation district. Much of the repayment obligation of the district has been met from power revenues distributed from the Minidoka powerplant.

Repayment contracts.—The Burley irrigation district assumed a contract obligation of \$3,056,119 for construction of the South Side pumping division, on the south side of the Snake River. In 1954 accumulated credits of power revenues were applied in sufficient amount to discharge the remaining unpaid obligation of the Districts' construction cost.

PUBLIC NOTICES AND CONTRACTS

- 1915, November 3: Public notice. Construction charge \$56.50 and \$57.50 per acre, payable in 20 graduated annual instalments.
- 1926, March 15: Contract Ilr-392; with Burley irrigation district under which the District assumed obligations under individual water-right applications. Delinquent charges and penalties funded. Repayment to be on crop production basis, annual payment 5 percent of gross average acre income for preceding 10 years.

The status of the South Side pumping division repayment contracts as of June 30, 1957, is as follows:

Total value of contracted repayment.....	\$3, 056, 119
Total matured charges.....	3, 056, 119
Total matured charges repaid.....	3, 056, 119
Total matured charges unpaid.....	0

¹ Increase in obligation due to funding of delinquent operation and maintenance charges and penalties.

² Decrease. Decreases due to funding of delinquent charges under 1926 contract.

³ Adjustment of obligation and distribution of credits.

UPPER SNAKE RIVER STORAGE DIVISION

The United States operates the reserved works, i. e., storage reservoirs, and the Fremont-Madison irrigation district operates the distribution system which was built with private funds and serves 12,000 irrigable acres. The district advances funds for Government operation of the reservoirs. Construction was authorized under the provisions of the Warren Act of 1911 (36 Stat. 925) by a finding

of feasibility dated September 6, 1935, which was approved by the President on September 20, 1935.

Repayment contracts.—In 1935 the Fremont-Madison irrigation district contracted with the United States to pay for the construction of Island Park and Grassy Lake Dams and Reservoirs on the Upper Snake River in Idaho and Wyoming, respectively. Repayments under the contract commenced in 1940. The total construction obligation is \$2,702,417, and as of June 30, 1957,

a total of \$1,228,118, or 45 percent, had been paid. The project is current in its payments.

1950, September 19: Final cost notice to Fremont-Madison irrigation district, \$2,702,417.

PUBLIC NOTICE AND CONTRACT

1935, July 15: Contract with Fremont-Madison irrigation district. Contract covers construction of Island Park and Grassy Lake Reservoirs. Payment to be made in 40 equal annual installments.

Total anticipated power revenues										2,509,576			7,240,740
Adjustments to be made	15,160	15,972	434,963	(76,301)	(11,683)	(354)	185,505	(350,958)	3,544,927	71,627,532	(74,225)	(33,477)	5,277,061

¹ Includes penstock costs American Falls Dam, \$293,978, and investigations costs, \$56,980.
² Includes construction costs, \$10,626,000 (1958 congressional justification) plus Fallsades storage, \$698,000 (90,000 acre-feet at \$7.75) and American Falls storage, \$71,000 (net).
³ The net revenues from irrigation water users is \$33,328,782, \$21,795,897 plus \$11,532,885.
⁴ The total power revenue is \$6,063,003, water users equity \$1,331,839, plus \$4,731,164.
⁵ Gravity division—surplus when existing individual water right accounts pay out.
⁶ South Side pumping division—surplus based on complete payout.
⁷ Jackson Lake Reservoir division—surplus is represented primarily by sale to other contractors of 102,000 acre-feet of space originally reserved for North Side pumping division. At the time a repayment contract is negotiated with North Side water users, this surplus will be applied.
⁸ American Falls Reservoir division—\$137,885 excludes sale of space to Michaud Flats project (\$103,218), and North Side pumping division (\$207,880 gross). Costs have not been transferred to the Miebald Flats project, but \$103,218 is included in the total estimated cost of that project and temporarily in costs of American Falls Dam.
⁹ Upper Snake River storage division—deficit exists because of repayment contract limitation concerning investigations costs.
¹⁰ North Side pumping division—surplus will be applied when repayments contract is negotiated for North Side pumping division.
¹¹ American Falls powerplant—includes only costs now in project accounts. Will be repaid from power revenues when powerplant is built.
¹² Movable equipment balance will be repaid by future depreciation charges.
¹³ The earned surplus is \$3,011,148, \$3,544,927 less \$527,071 of units 1-6 costs covered in Gravity and South Side pumping divisions, \$1,209 and \$5,499.
¹⁴ The earned surplus is \$1,348,316, \$1,627,532 less 3 percent interest \$279,216.

MIRAGE FLATS PROJECT

HAY SPRINGS, NEBR.

The construction of the Mirage Flats project in Dawes and Sheridan Counties of Nebraska was approved by the President on April 26, 1940, under terms of the Water Conservation and Utilization provisions of the 1940 Interior Department Appropriation Act of May 10, 1939 (53 Stat. 685). Resumption of construction to complete project was approved by the President July 13, 1944.

The project was developed to irrigate, rehabilitate, and thereby stabilize 11,670 acres of land previously dry-farmed. Project features include Box Butte Dam and Reservoir, Dunlap Diversion Dam, Mirage Flats Canal, four laterals and the necessary drainage systems.

The total cost of constructing the Mirage Flats project was \$3,061,626, excluding Farm Security Administration costs, and contributions by WPA and CCC. Nine hundred and eighty-five thousand dollars is reimbursable as confirmed in the findings of the Secretary of the Interior dated June 15, 1944, made pursuant to the July 16, 1943, amendment (57 Stat. 566) to the WCU Act of August 11, 1939 (53 Stat. 1418) as amended by the act of October 14, 1940. This finding was approved by the President on July 13, 1944. A total of \$204,502 was transferred to the Farm Security Administration of the Department of Agriculture for land development, \$170,000 of which is reimbursable and will be recovered in the sale of the project lands by the Soil Conservation

Service. The remaining \$815,000 was utilized by the Bureau of Reclamation in constructing the project works. The irrigation project was completed in 1946.

Operation and maintenance of the project was transferred to the Mirage Flats irrigation district January 1, 1951.

Repayment contracts.—The original Mirage Flats irrigation district repayment contract was made December 28, 1950. The contract specifies the repayment of \$815,000, plus whatever portion of \$31,300 that may have been expended by the United States for equipment and machinery for operation and maintenance of the project on or before the district took over the care, operation and maintenance of the project works on January 1, 1951. This amounts to \$26,918.

The contract is to be amended in accordance with the act of August 21, 1957 (71 Stat. 402): (a) To provide for the application of \$12,642 of accumulated development period credits toward reduction of a current delinquency in construction charge payment, (b) to reduce the 38th installment to \$24,890, (c) to a 39th payment of any balance in the construction charge obligation, and (d) to include a variable payment provision if desired by the district.

CONTRACT

1950, December 28: Contract I81r-1415 with Mirage Flats irrigation district for \$815,000 plus other costs prior to January 1, 1951.

The summary of status of the Mirage Flats irrigation district repayment contract:

Total value of contracted repayment for irrigation works.....	\$815, 000
Actual equipment cost under repayment contract.....	26, 918
Total.....	841, 918
Total matured charges.....	42, 780
Total matured charges repaid.....	31, 390
Total matured charges unpaid.....	11, 390

Payout schedule.—Following termination of the 5-year development period, construction repay-

ment is scheduled in 38 successive annual installments as follows:

Installment No.	Amount
1-4, inclusive.....	\$1, 000
5.....	18, 890
6.....	19, 890
7.....	20, 890
8.....	22, 890
9-12, inclusive.....	23, 890
13-38, inclusive.....	24, 890
39, balance of construction obligation.....	(¹)

¹ This amount currently would be \$12,658.

Construction repayment history¹

Collected.....				31, 390				
Uncollected.....				11, 390				

¹ Prior to 1952, the Mirage Flats Cooperative Association, lessee of the acreage, paid for water delivered at rates fixed by the Commissioner of the Bureau of Reclamation. Accumulated excess of income over expense of \$12,662.40, \$12,642 of which is to be applied to the current delinquency plus interest per act of Aug. 21, 1957 (71 Stat. 402).

MISSOULA VALLEY PROJECT

MISSOULA, MONT.

The construction of the Big Flat unit of the Missoula Valley project in Missoula County, Mont., was approved by the President on May 10, 1944, under authority of the Water Conservation and Utilization Act of August 11, 1939 (53 Stat. 1418), as amended, particularly by the act of July 16, 1943.

The Big Flat unit was developed to furnish irrigation water to 900 acres of previously unirrigated lands. Facilities consist of a canal diverting water from the Bitterroot River at a point 5 miles southwest of Missoula, Mont.

The total actual cost of constructing the Big Flat unit was \$278,321. Under authority of the Water Conservation and Utilization Act, \$45,000 of this amount has been established as the reimbursable obligation of the Big Flat irrigation district, and the remainder, totaling \$233,321 has been declared nonreimbursable.

The Bureau of Reclamation operated the system during a 5-year development period. Operation by water users began January 1, 1955.

Repayment contract.—The Big Flat irrigation district contract was signed April 2, 1945. This contract provides for repayment of \$45,000 in 80

semiannual installments following a 5-year development period. Development period accruals and collections were \$3,000, \$2,261, \$1,859, \$2,069, and \$1,564 for fiscal year 1950 through fiscal year 1954, respectively. The first payment was made in 1956 and repayment will be completed in 1995.

PUBLIC NOTICES AND CONTRACTS

1945, April 2: Contract Ilr-1434 with Big Flat irrigation district for repayment of \$45,000 allocated as reimbursable.

1949, November 25: Public notice. Announcing development period as the 5-year period commencing January 1, 1950.

The summary of status of repayment contract:

Total value of contracted repayment.....	\$45,000
Total matured charges.....	844
Total matured charges repaid.....	633
Total matured charges unpaid.....	211

The cost and repayment allocation:

Total project cost.....	\$278,321
Reimbursable costs: Irrigation.....	45,000

Nonreimbursable costs: Water Conservation and Utilization Act.....	233,321

MISSOURI RIVER BASIN PROJECT

TEN STATES

The initial stages of the Missouri River Basin project were authorized by the Flood Control Act of December 22, 1944 (58 Stat. 887, Public Law 534, 78th Cong., 2d sess.), which approved the general comprehensive plan set forth in Senate Document 191 and House Document 475, as revised and coordinated by Senate Document 247, 78th Congress. The comprehensive plan was authorized by the Flood Control Act of July 24, 1946 (60 Stat. 634), and subsequent legislation for the conservation, control, and use of water resources in the entire Missouri River Basin. The justifiable and beneficial uses of these water resources which are being considered include flood control, aids to navigation, irrigation of approximately 3,335,200 acres of new land, furnishing a supplemental water supply to approximately 483,800 acres of land, generation of power from plants with a total installed capacity of 2,414,700 kilowatts, municipal and industrial water supplies, stream-pollution abatement, sediment control, preservation and enhancement of fish and wildlife, and creation of recreational opportunities.

Only the divisions or units which have been constructed or are under construction are described here.

The total estimated construction cost and tentative allocation of those costs for the entire Missouri River Basin project are presented in the table, "Allocation and Repayment of Costs." In the payout study for the Missouri River Basin project as presented here, the "net operating revenues" are the revenues derived from the sale of electric energy from the integrated power system of the Missouri River Basin market area. The power systems of the Colorado-Big Thompson, Kendrick, Riverton, and Shoshone projects have been integrated with the Missouri River Basin project for the purposes of marketing the power produced from these projects with the Missouri

River Basin project acting as the marketing agent. In return for all the power generated on the five integrated projects the Missouri River Basin project returns to each project revenues sufficient to cover the annual operating expenses and reserve for replacement of the production facilities and allow a net operating revenue great enough to repay the construction costs for the whole project as though it was operating individually.

The Fort Peck project has been included in the Missouri River Basin project payout study for repayment purposes. The Fort Peck power system has been integrated with the Missouri River Basin project to serve a common market area.

ANGOSTURA UNIT—CHEYENNE DIVISION, SOUTH DAKOTA

Angostura Dam and Reservoir, located on the Cheyenne River in Fall River County, S. Dak., was authorized initially by the President on February 19, 1941, under the Water Conservation and Utilization Act of August 11, 1939 (53 Stat. 1418), as amended, and it was reauthorized under the Flood Control Act of 1944 (58 Stat. 887) as a unit of the Missouri River Basin project. Angostura Dam and Reservoir provides a water supply for 12,154 acres of irrigable land along the Cheyenne River in Fall River and Custer Counties, S. Dak., and land in the undeveloped Cheyenne pumping units which lie downstream from the reservoir. Other purposes of the reservoir include power production, flood control along the Cheyenne River, fish and wildlife conservation and recreational opportunities.

The principal features involved are the Angostura Dam and Reservoir with a conservation storage capacity of 160,000 acre-feet plus 60,000 acre-feet of superstorage for flood control; the

¹ Includes \$1,397,000 of Shoshone project costs for Shoshone extensions unit.

Angostura powerplant with 1,200 kilowatts of installed capacity; 30 miles of main canal and 37 miles of laterals to supply irrigation water to 9,535 acres of land on the south side of the Cheyenne River and 2,619 acres on the north side. Construction of the dam was completed in December 1949, the powerplant in December 1951 and the canals in July 1953.

Estimated total cost of the unit is \$14,655,285, which is allocated as follows: Irrigation \$12,632,206, power \$704,537, recreation \$180,000, flood control (nonreimbursable) \$538,852, and fish and wildlife (nonreimbursable) \$599,690.

Angostura Dam and Reservoir and the powerplant are being operated by the Bureau of Reclamation with appropriated funds. Revenue obtained through sale of power is covered into the Reclamation fund for operation and maintenance and retirement of project costs. Irrigation facil-

ities currently are being operated by the Bureau of Reclamation with appropriated funds which are reimbursed by the irrigation district. It is anticipated that the irrigation district will take over full responsibility for operation and maintenance of all irrigation facilities on or before the end of the 10-year development period which began in 1956.

Repayment and water-service contracts.—The contract with the Angostura irrigation district is a combined water-service and repayment type. The contract was signed May 29, 1951, and became effective at the beginning of the development period January 1, 1956. Repayment of distribution system construction costs begins after the 10-year development period. The repayment part of the contract obligates the district for \$718,000, to be paid in 40 equal annual installments of \$17,950. The water-service part of the

¹ Includes \$59,855,000 for investigations of inactive units and for investigations by other Interior agencies; \$195,000 for reimbursable fish and wildlife costs; and \$11,069,000 for reimbursable recreation costs.

² Surplus power revenues applied from 70th year. Total \$1,815,060,000.

contract obligates the district to pay \$23,550 annually for 30 years. The estimated annual construction component of \$7,850 in the water-service portion of the contract amounts to \$314,000 in 40 years. Under the water-service part of the contract, the district may elect to pay annual installments according to a variable formula reflecting changing economic conditions. First delivery of water under this contract was in 1956.

CONTRACTS

- 1951, May 29: Water service and repayment contract between Angostura irrigation district and the United States for 40 years plus 10-year development period. No payments have been made as of June 30, 1956.
- 1952, June 16: Interim contract with Angostura irrigation district providing for furnishing some, but not all, of the lands with irrigation water at the rate of \$1 per acre-foot. No water was delivered under this contract.
- 1953, May 7: Interim contract with Angostura irrigation district providing for furnishing some, but not all, of the lands with irrigation water at the rate of \$1 per acre-foot. Payments made under this contract totaled \$3,221.67, which have been credited to the incidental cost of furnishing such water during the construction period.
- 1954, March 31: Interim contract with the Angostura irrigation district providing for furnishing some, but not all, of the lands with irrigation water at the rate of \$1 per acre-foot. Payments made under this contract totaled \$14,651.34, which have been credited to the incidental cost of furnishing such water during the construction period.
- 1955, May 16: Interim contract with the Angostura irrigation district providing for furnishing some, but not all, of the lands with irrigation water at the rate of \$1 per acre-foot. Payments made under this contract totaled \$14,035.06, which have been credited to the incidental cost of furnishing such water during the construction period.

WATER SERVICE CONTRACT (Combined with repayment contract)

District..... Angostura irrigation district.
 Date of contract..... May 29, 1951. Effective 1956.
 Date of initial water delivery under this contract..... 1956.
 Type of contract..... Repayment and water service.
 Contract period..... 40 years.

Rates..... Repayment portion of contract: \$17,950 annually for 40 years beginning in 1966. Water service portion of contract: During first 10 years beginning in 1956 an amount equal to the annual operation and maintenance cost of the district water supply works operated by the United States; for the succeeding 30 years it is to be \$23,550 annually, of which \$7,850 is the estimated construction component.

The summary of status of repayment portion of contract:

Total value of contracted repayment.....	\$718,000
Total matured charges.....	0
Total matured charges repaid.....	0
Total matured charges unpaid.....	0

Operation and maintenance assessments history

Fiscal year	Accruals	Collections
1956.....	\$15,500	\$15,500
1957.....	18,990	18,990
Total.....	34,490	34,490

BOSTWICK DIVISION, NEBRASKA-KANSAS

The Bostwick division is located about midway east and west along the Nebraska-Kansas State line. About 72 percent of the irrigable area lies south of the line in Kansas.

Harlan County Dam and Reservoir, a multipurpose facility on the Republican River in Nebraska, was completed in 1952 by the Corps of Engineers under the Flood Control Acts of 1941 and 1944. It provides the principal source of storage water for irrigation in the division. Lovewell Dam and Reservoir on White Rock Creek in Kansas is nearing completion by the Bureau. It will provide irrigation storage, irrigation regulation, and flood control.

The irrigation facilities in Nebraska have been completed to the extent that water can be delivered to essentially all of the irrigable lands in the Bost-

wick irrigation district which serves the Nebraska portion of the division. The principal facilities completed include the Superior Courtland Diversion Dam, Superior Canal and laterals, Courtland Canal and laterals in Nebraska, Franklin Canal and laterals, Franklin South Side Canal and laterals, Naponee Canal and laterals, and a portion of the drainage works to serve 24,240 irrigable acres in Nebraska.

The irrigation facilities in Kansas have been completed to the extent that water can be delivered to essentially all of the irrigable lands in block I of the Kansas-Bostwick irrigation district No. 2; i. e., that portion of the lands within the existing district boundaries north of White Rock Creek. The principal facilities completed include the Courtland Canal and laterals to Lovewell Reservoir, the North Canal and laterals, the Ridge Canal and laterals, and a portion of the drainage works to serve about 10,000 acres in block I. Construction is underway on irrigation works in the remainder of the district, which will ultimately contain an irrigable area of 49,000 acres. Facilities not yet completed include the Courtland Canal and laterals south of Lovewell Reservoir, Courtland West Canal and laterals, White Rock Canal and laterals, White Rock Extension Canal and laterals, Miller Canal and laterals, four pump canals and laterals, and certain drainage works.

Construction of the Scandia diversion dam, Scandia Canal and laterals, and the drainage works to serve 13,000 irrigable acres in the Scandia unit has been deferred pending organization of the water users and completion of repayment contract negotiations.

The current estimated project cost of the division is \$48,591,209 (exclusive of the Corps of Engineer's cost for Harlan County Dam and Reservoir), of which \$2,396,209 is tentatively allocated to flood control, and \$24,000 to fish and wildlife and are nonreimbursable. The remaining \$46,171,000 is reimbursable and consists of irrigation costs of \$46,134,000 and \$37,000 of specific costs for recreation.

In addition, the December 1955 cost for Harlan County Dam and Reservoir was \$45,232,000, of which \$33,927,000 was allocated to flood control

and is nonreimbursable and \$11,249,000 is allocable to irrigation and is reimbursable. It is anticipated that of the total irrigation costs, the water users will repay \$14,623,000, and basin power revenues will repay the balance of \$42,760,000.

Water-service and repayment contracts.—Contracts have been executed with two irrigation districts in compliance with the 1939 Reclamation Act. These contracts have been amended and are now considered adequate.

Bostwick irrigation district (Nebraska).—The contract of February 21, 1949, as amended November 10, 1954, provides for a construction charge obligation of \$3,105,000 to cover the cost of distribution works and that portion of the drainage works required immediately. This obligation is payable in 40 equal annual installments following a 5-year development period. The district agreed to construct future drainage works as required to the extent of an expenditure of \$900,000. Water-service charges under this contract provide for a construction component to be applied on the cost of the water supply works. It is estimated that this component will produce an average of \$14,000 annually or a total of \$490,000 in the 35 years following the development period.

Kansas-Bostwick irrigation district No. 2.—The contract of April 20, 1951, as amended April 24, 1957, provides for water-service charges and for a construction charge obligation of \$5,781,000 to cover the cost of the distribution works and that portion of the drainage works required immediately. The obligation is payable in 40 equal annual installments, by irrigation blocks, following a 5-year development period. Water-service charges under this contract will include a construction component to be applied on the cost of the water supply works. It is estimated that this construction component will produce an average of \$23,000 annually or a total of \$805,000 in the 35 years following the development period. In addition, the district has agreed to construct facilities to serve tracts containing less than 40 irrigable acres, estimated to cost \$539,000, and future drainage works as required at an estimated cost of \$1,961,000.

Water-service contracts

Organization	Date of contract	Date of initial payment	Type of contract	Contract period (years)	Repayment and water-service rates
Bostwick irrigation district (Nebraska).	Feb. 21, 1949, amended Nov. 10, 1954.	1962-----	Combination water-service and repayment.	40-----	Water service: First 5 years, equivalent to irrigation operation and maintenance costs incurred by United States. Next 35 years, \$6,700 considered as equivalent to irrigation, operation and maintenance costs incurred by United States, plus additional water charges at the rate of \$1 per acre-foot estimated to return \$14,000 annually. Construction repayment: After 5-year development period, \$77,625 annually for 40 years.
Kansas-Bostwick irrigation district No. 2.	Apr. 20, 1951, amended Apr. 24, 1957.	1962-----	-----do-----	40 for each block.	Water service: First five years, equivalent to irrigation operation and maintenance costs incurred by United States. Next 35 years, equivalent to irrigation operation and maintenance costs incurred by United States, plus additional water charges at the rate of \$1 per acre-foot estimated to return \$23,000 annually. The total annual installment of \$144,525 is to be apportioned among the irrigation blocks and the district will pay the sum of the apportioned amount following a 5-year development period for each block. Payments on behalf of each block to cover a 40-year period.

BOYSEN UNIT—BOYSEN DIVISION,
WYOMING

Boysen Dam was authorized by the Flood Control Act of 1944 (58 Stat. 887). Boysen unit also includes a 15,000-kilowatt powerplant. It is designed to regulate the flow of the Bighorn River to furnish irrigation water for the Bighorn Basin division and, by replacement, for land above the reservoir; to produce both firm and secondary electric energy; to give flood control; to provide fish and wildlife and recreational values; and to desilt the water which is turbid the year round.

Boysen unit was one of the first units of the Missouri River Basin project to be selected for construction. Initial work on the unit was begun in July 1946 and construction of Boysen Dam was

started in September 1947. The dam was completed and closure was made in October 1951. The powerplant was completed in 1952; one generating unit was placed in operation in August of that year, and the second, in December of that year. Of the total estimated cost of \$34,216,000, the cost to June 30, 1957, was \$33,410,010.

Tentative allocation of the total estimated unit cost is as follows:

Reimbursable:	
Irrigation-----	\$19, 205, 000
Power-----	8, 130, 000
Recreation-----	163, 000
Subtotal, reimbursable-----	27, 498, 000
Nonreimbursable:	
Fish and wildlife-----	2, 288, 000
Flood control-----	4, 430, 000
Subtotal, nonreimbursable-----	6, 718, 000
Total-----	34, 216, 000

Repayment of reimbursable costs is anticipated to be made by the following revenues:

Power.....	\$8, 130, 000
Repaid by surplus basinwide power revenues..	19, 368, 000
Total.....	27, 498, 000

The unit is operated by the Bureau of Reclamation with appropriated funds. Revenues from the sale of power are covered into the Reclamation fund for retirement of project costs.

CANYON FERRY UNIT—HELENA-GREAT FALLS DIVISION, MONTANA

The Canyon Ferry unit, located on the mainstem of the Missouri River about 50 miles downstream from Three Forks, Mont., is a multi-purpose development planned for the control of floods, the generation of electric power, conservation of fish and wildlife, recreational benefits, and the regulation of flow of the upper Missouri River. The unit was authorized under the Flood Control Act of December 22, 1944 (58 Stat. 887). The total estimated cost of the unit is \$29,180,000. Construction of the unit was started in 1949 and was essentially completed in 1954. It is an important structure in the basinwide plan. It will make possible the irrigation development of approximately 310,000 acres of new land in other units, and provide supplemental water for approximately 196,000 acres by storage of unappropriated waters. The control and regulation of the flow at the dam will maintain adequate flow for senior appropriators of water downstream.

The Canyon Ferry powerplant has an installed generating capacity of 50,000 kilowatts in three 16,667-kilowatt units. Power production began in December 1953. Annual energy output will vary from 320,000,000 kilowatt-hours initially, after marketing contracts stabilize, to approximately 285,000,000 kilowatt-hours ultimately after full development of upstream irrigation. The switchyard at the powerplant, for transformation to 115,000 volts, provides for lines to East Helena, Three Forks, and other future outlets. Presently, 2 parallel 115,000 volt lines extend from the switchyard to East Helena and deliver the entire output of the plant.

The features include the Canyon Ferry Dam, Reservoir and powerplant. The dam is a 225-foot concrete structure with a crest length of 1,000 feet. The reservoir capacity is approximately 2,050,000 acre-feet.

Revenues from the sale of power will be covered into the Reclamation fund to defray operating expenses and for retirement of the construction cost.

CEDAR BLUFF UNIT—SMOKY HILL DIVISION, KANSAS

Cedar Bluff Dam and Reservoir were authorized for construction by the Flood Control Act of 1944 (58 Stat. 887). The dam and reservoir have been completed and are being operated currently for flood protection; construction of the irrigation facilities is being deferred until organization of the water users is completed and a repayment contract negotiated. The development of the Cedar Bluff unit in Trego and Ellis Counties, Kans., will serve the purpose of flood control, irrigation and will provide additional benefits for fish and wildlife and recreation. The completed Cedar Bluff Dam and Reservoir, in conjunction with the downstream Kanopolis Dam and Reservoir, control floods on the Smoky Hill River and provide storage space for irrigation purposes. It is currently estimated that 6,000 acres of land will be irrigated and that 4,000 acre-feet of stored water will be used annually by a fish hatchery to be situated immediately below the dam.

Total project costs, estimated to be \$18,895,682, are tentatively allocated as follows: nonreimbursable \$8,313,382 to flood control and \$16,600 to fish and wildlife; reimbursable \$10,561,300 for irrigation and \$4,400 for the specific costs of recreation.

It is expected that repayment by irrigators will be in the form of a combination water-service and construction repayment contract as provided for in sections 9 (d) and 9 (e) of the Reclamation Project Act of 1939 (53 Stat. 1187). The estimated repayment from water users is \$1,873,000. The balance of reimbursable costs would be retired by Missouri River Basin project power revenues.

CROW CREEK PUMP UNIT—THREE FORKS DIVISION, MONTANA

The Crow Creek pump unit is located in southwestern Montana, Broadwater County, about 47 miles southeast of Helena and 13 miles south of Townsend.

Authorization for the Crow Creek pump unit is to be found in the Flood Control Act of December 22, 1944 (58 Stat. 887), 78th Congress, 2d session (S. Docs. 191 and 247), and the Depart-

ment of the Interior Appropriation Act of 1950 (63 Stat. 765).

The irrigation plan provides for a pumping plant which lifts irrigation water an average of 175 feet from the Missouri River through a 1,175-foot-long discharge concrete pipeline to the Toston Canal, where it flows by gravity through the Toston Tunnel, the Toston and Lombard Canals, and the distribution works.

The general purpose of the Crow Creek pump unit is to replace irrigated land in Broadwater County that was inundated by the Canyon Ferry Reservoir.

The principal features of the unit are the Crow Creek pumping plant, Toston and Lombard Canals, and lateral and drainage systems.

The Crow Creek pump unit was transferred to operation and maintenance status on February 1, 1955, and is operated and maintained by the Bureau of Reclamation with funds advanced by the water users.

A contract dated August 12, 1955, has been entered into with the Toston irrigation district pursuant to the special authorizing act of August 12, 1955 (69 Stat. 697). Under this contract the United States will furnish water to the district on a year-to-year basis for a period not to exceed 10 years. The Toston irrigation district includes only 1,542 acres of the full 5,000 irrigable acres which can be served by the unit works. In view of the small acreage in the district and the consequent limited financial resources of the district, the district is able, and under the contract is required, only to pay the cost of operating and maintaining the unit works exclusive of the cost of electrical energy for pumping. Both the contract and the authorizing act contemplate that the district acreage will increase so that by the end of the 10-year special contract period, the district will be capable of entering into permanent repayment arrangements.

Operation and maintenance assessments history

Fiscal year	Accruals	Collections
1956.....	\$4, 482	\$4, 482
1957.....	9, 645	5, 895
Total.....	14, 127	10, 377

Total cost of the Crow Creek pump unit is allocated to irrigation—\$1,670,000, and fish and wildlife—\$45,000.

DICKINSON UNIT—HEART DIVISION, NORTH DAKOTA

Dickinson unit is located in Stark County in southwestern North Dakota. Dickinson Dam and Reservoir are on the Heart River about 1½ miles upstream from the city of Dickinson. It is a multiple-purpose unit which provides storage for irrigation and municipal water, flood control for downstream areas, sedimentation control, fish and wildlife conservation, and recreational opportunities.

The principal feature of the unit is a rolled earthfill dam with combined concrete spillway and outlet works structure and a 16,500 acre-foot reservoir. Construction of the dam was started in March 1949 and substantially completed in August 1950. Subsequent work includes extension of the outlet works into the reservoir, and emergency repair of the spillway damaged by flood in the spring of 1954.

The original plan also called for small pumping plants to serve 915 acres of land in several tracts adjacent to the river. Because of Dickinson's rapidly increasing requirement for municipal water, however, plans have been revised to accommodate approximately 400 acres of irrigation. Development of irrigation is being accomplished by the landowners who are building their own irrigation works and are obtaining water on a temporary rental basis. The irrigators have formed the Dickinson-Heart River Mutual Aid Corp. for the purpose of contracting as a group for a permanent water supply.

The current estimated total cost of the unit is \$1,845,241, of which \$1,476,223 represents the cost of Dickinson Dam and Reservoir. A total of \$12,982 is tentatively allocated to flood control and \$232,237 to fish and wildlife as nonreimbursable. Of the remainder, \$273,389 is allocated tentatively to irrigation, \$1,181,633 to municipal water and \$145,000 to recreation. Currently estimated repayment of the reimbursable cost is as follows:

By municipal water users.....	\$830, 000
By surplus basinwide revenues.....	770, 022
Total.....	1, 600, 022

Whatever amount is paid on construction costs of the unit under the contract being negotiated with the Dickinson-Heart River Mutual Aid Corp. will be deducted from the amount shown

above as being repaid by surplus basinwide revenues.

Dickinson Dam and Reservoir are operated by the Bureau of Reclamation under direct appropriations. Management of the reservoir area is the responsibility of the Dickinson Park Board under a contract with that organization.

Municipal water-service contracts.—The water-service contract with the city of Dickinson provides for delivery of 1,100 acre-feet of water annually for domestic, commercial, industrial, and municipal uses.

CONTRACT

Organization: City of Dickinson, N. Dak.

Date of contract: September 24, 1949.

Type of contract: Water service.

Contract period: 40 years.

Date of initial water delivery: May 1952.

Rates of payment: Semiannual payments are prescribed as indicated below. The 80 payments will yield a return of \$950,000, of which \$120,000 is estimated to be required for operation and maintenance and replacement and \$830,000 is estimated to be available for application to construction costs.

Payments	Each
First 10.....	\$7, 500
Second 10.....	8, 750
Third 10.....	10, 000
Fourth 10.....	11, 250
Fifth 10.....	12, 500
Sixth 10.....	13, 750
Seventh 10.....	15, 000
Eighth 10.....	16, 250

The status of the Dickinson municipal water service contract as of June 30, 1956, is as follows:

Total amount of contract.....	\$950, 000
Total matured charges.....	75, 000
Total charges paid (construction and operation and maintenance).....	75, 000

Annual operation and maintenance.—The annual income and expense by fiscal years under water-service contracts for irrigation and municipal water are as follows:

Fiscal year	Irrigation		Municipal water	
	Income	Expense	Income	Expense
1952.....	\$250. 00	-----	\$15, 000	\$1, 354. 56
1953.....	749. 50	\$235. 51	15, 000	764. 45
1954.....	-----	219. 80	15, 000	941. 60
1955.....	118. 00	202. 24	15, 000	958. 09
1956.....	951. 50	509. 35	15, 000	2, 696. 03
1957.....	400. 00	768. 86	16, 250	3, 504. 06
Total...	2, 469. 00	1, 935. 76	91, 250	10, 218. 79

FORT CLARK UNIT—NORTH DAKOTA PUMPING DIVISION, NORTH DAKOTA

Fort Clark unit is located in Oliver and Mercer Counties in west-central North Dakota near the town of Stanton and about 45 miles northwest of Mandan. The purpose of the unit is to provide a full water supply for the irrigation of 2,039 acres of new land lying on two benches along the Missouri River. Facilities of the unit consist of a river pumping plant, two relift plants and a system of canals, laterals and drains. Construction of these facilities, except deferred drains, was substantially completed in August 1953.

The estimated cost of the unit is \$777,284, of which \$776,507 is allocated to irrigation and \$777 to fish and wildlife. Sixty-six thousand dollars of the amount allocated to irrigation is to be repaid by the irrigation district and the remainder by surplus basinwide power revenues.

Facilities of the unit will be operated by the Bureau of Reclamation until such time as the operation and maintenance of them can be turned over to the Fort Clark irrigation district. Prior to the beginning of the development period, water has been made available to the landowners on an interim basis, 1956 being the first year of the 10-year development period.

Repayment and water-service contract.—A combination repayment and water-service contract with the Fort Clark irrigation district provides for repayment of \$66,000 of distribution facilities construction cost in the 40 years following the 10-year development period. The water-service part of the contract requires payment of the annual operation and maintenance cost of the supply works during the first 10 years of the 40-year contract period. During the next 20 years the charge will be \$5,100 per year, less the cost of operation and maintenance of water supply works operated by the district. During the last 10 years the annual charge will be \$5,200, less adjustments indicated above.

CONTRACT

District: Fort Clark irrigation district.

Date of contract: May 22, 1951.

Date of initial water delivery: 1956.¹

Type of contract: Combination repayment and water service.

Contract period: 40 years plus a 10-year development period.

¹ Water furnished on an interim basis prior to this date.

Water service rates: Actual operation and maintenance of supply works for the first 10 years, \$5,100 per year for the next 20 years, and \$5,200 per year for the last 10 years of the contract period.

Operation and maintenance assessments history¹

Fiscal year	Accruals	Collections
1956-----	\$4,700	\$4,700
1957-----	4,700	4,700
Total-----	9,400	9,400

¹ Assessments under the water service portion of the contract.

As of June 30, 1956, no repayment amounts were due under the terms of the contract.

FRENCHMAN-CAMBRIDGE DIVISION,
NEBRASKA

Construction of the Frenchman-Cambridge division in southwestern Nebraska was initiated early in 1947. It was authorized by the Flood Control Act of 1944 (58 Stat. 887) and is being developed on the Republican River and four of its tributaries to provide flood control in the valley and downstream area; irrigation of 64,360 acres, including 10,490 acres already irrigated; fish and wildlife conservation; recreational opportunities; and pollution abatement.

Structural features and lands to be irrigated, which mostly follow the course of the Republican River and Frenchman Creek, are located in 7 counties: Chase, Hayes, Frontier, Hitchcock, Red Willow, Furnas, and Harlan. Major works will consist of 4 multiple-purpose reservoirs, 4 diversion dams, and the necessary canals, laterals, and drains to serve the project lands. Three of the major structures, Medicine Creek, Trenton, and Enders Dams, are complete. Red Willow Dam, which will complete the storage facilities, is yet to be constructed. Initial water to newly irrigated lands was made available in 1951 in the form of canal-side deliveries.

The current estimated cost of the division is \$79,651,454. A total of \$19,656,754 is allocated as nonreimbursable: \$19,616,754 to flood control, and \$40,000 to fish and wildlife. Reimbursable costs total \$59,994,700, including \$59,879,000 for irrigation and \$115,000 for the specific cost of recreation facilities. Red Willow Dam and Reservoir, previously a Corps of Engineers development, has been transferred by Congress to the Bureau of Reclamation and is included in the

total cost estimates. The current estimated cost for Red Willow Dam and Reservoir is \$8,259,000.

The irrigable lands of the division are to be served by 3 irrigation districts. Construction to date has been primarily associated with the storage dams and reservoirs to supply all 3 districts and with carriage and distribution works to serve the Frenchman-Cambridge irrigation district, largest of the 3.

In the Frenchman-Cambridge irrigation district, the irrigation works to serve block I—composed of about 22,600 acres of irrigable land under the Cambridge diversion dam, canal and laterals—have been completed and turned over to the district for operation and maintenance. Construction is in progress on the Meeker-Driftwood system of canals, laterals and drains to serve about 16,500 acres which will be in block II. Construction of the irrigation works below the proposed Red Willow Dam and Reservoir, to serve about 4,100 acres of land under the Red Willow and McCook Canals has not been started.

Construction to enlarge the Culbertson Canal, which will serve both the old Frenchman-Valley irrigation district and the newly organized H & RW irrigation district, was initiated in 1957. For the past several years surplus waters stored in Enders Reservoir have been made available to the Frenchman-Valley district to supplement its stream-flow rights in the irrigation of about 9,600 acres. The district's water supply under its repayment contract will be delivered during reconstruction of the Culbertson diversion dam and enlargement of the Culbertson Canal. Construction has not been started on additional facilities, particularly the Culbertson Canal extension and laterals to serve the H & RW irrigation district which contains about 11,500 acres of irrigable land.

Repayment contracts.—A water service and repayment contract dated May 29, 1947, with the Frenchman-Cambridge irrigation district, failed court confirmation and was amended July 19, 1951, to eliminate the court's exceptions. This contract was amended further on January 4, 1956. As amended the contract provides for a construction obligation of \$4,401,000, payable in 40 annual installments for each irrigation block following a 5-year development period. In addition, the district will pay a water service charge of \$14,500 for delivery of three-fourths of its water supply and \$1 per acre-foot for the remainder of its water

requirements. The charge of \$14,500 is designed to cover the cost of operation and maintenance of the reserved works, and it is estimated that the \$1 rate will recover an average of \$19,500 annually or \$682,500 over a period of 35 years on water-supply construction costs. The district will construct "future" drains currently estimated at a cost of \$1,301,000.

A water-service contract was entered into with the Frenchman Valley irrigation district on November 7, 1956. This contract provides: (a) for acquisition by the United States of the district's Culbertson diversion dam and canal at an appraised value of \$247,000; (b) for delivery of 20,000 acre-feet of the district's water supply upon advance of a fixed, annual, water-service charge of \$14,880, of which \$6,180 is represented by an annual credit to the district until the credits total \$247,000 in payment for the diversion dam and canal, leaving a net annual water-service charge of \$8,700; (c) for the delivery of additional water at a water-service rate of \$1.50 per acre-foot; and (d) for joint use of the diversion dam and canal by the two irrigation districts. It is estimated that the fixed, annual water-service charge will cover the districts' share of operation and maintenance of works operated by the Bureau and return \$460,800 in a period of 40 years on construction costs. Further, it is estimated that additional water-service charge of \$1.50 will return \$90,000 during this same period, making a total repayment of \$550,800.

A combination water-service and repayment contract was entered into, also on November 7, 1956, with the H & RW irrigation district which includes lands not heretofore irrigated in Hitchcock and Red Willow Counties. This contract provides for: (a) extension of the Culbertson Canal and construction of distribution and drainage systems to serve the 11,500 acres of irrigable land; (b) repayment in 40 years of the cost of constructing the distribution and drainage works as a construction charge obligation of \$1,320,000; and (c) payment of annual water-service charges by the district to cover operation and maintenance costs of Enders Reservoir and to yield an estimated total of \$201,000 in 35 years to apply on the construction cost of water supply works.

Reimbursable construction costs in excess of the payment capacities of the districts will be amortized by power revenues from the Missouri River Basin project.

No accruals to date under the contracts.

WATER SERVICE CONTRACT

District-----	Frenchman-Cambridge irrigation district.
Date of contract-----	May 29, 1947; amended July 19, 1951; amended January 4, 1956.
Date of initial water delivery-----	1951, under temporary water rental arrangements.
Type of contract-----	Combination 9 (d)—9 (e).
Contract period-----	40 years.
Water service rates-----	\$14,500 plus \$1 per acre-foot for all water in excess of 58,000 acre-feet.

The summary of status of repayment contracts:

Total value of construction charge obligations-----	\$5,721,000
Total matured charges-----	0
Total matured charges repaid-----	0
Total matured charges unpaid-----	0

GLENDONIT—OREGON TRAIL DIVISION, WYOMING

The multiple-purpose Glendo unit will provide irrigation water supplies, generate electric power, serve flood control, and restore fishery values in the North Platte River. Other related benefits in the form of pollution abatement, sediment control, recreation, and improvement of municipal and industrial water supplies will accrue. Principal features of the unit are Glendo Dam, Reservoir, and powerplant near Glendo, Wyo., and Fremont Canyon powerplant at the backwaters of Alcova Reservoir. A definite plan report was reviewed by the States of Colorado, Nebraska, and Wyoming and approved by Congress on July 16, 1954. By stipulation amending the North Platte River decree, Glendo Reservoir will provide for the use of 40,000 acre-feet of water annually for irrigation in Wyoming and Nebraska.

Construction began on Glendo Dam and powerplant in November 1954, and on Fremont Canyon powerplant in July 1956. Estimated construction costs are \$39,249,140 allocated as follows: power \$30,246,630; irrigation \$4,004,880; flood control \$4,330,800; fish and wildlife \$653,830; and recreation \$13,000. The power allocation is repayable within 50 years with interest at 3 percent as a part of the overall Missouri River Basin power system. It is anticipated that water users will repay a major portion, if not all, of the irrigation costs. Flood control and fish and wildlife costs

are nonreimbursable. Any remainder of the irrigation investment and the recreation allocation will be paid by basinwide power revenues.

Water-service repayment contracts are being negotiated with existing irrigation districts and canal companies to supplement their stream flow supplies. It is anticipated that the water users will pay irrigation's share of the allocated costs via the renewable water-service contracts. It is expected that one or more of the repayment contracts will be executed by the end of 1957.

HANOVER-BLUFF UNIT—BIGHORN BASIN DIVISION, WYOMING

The Hanover-Bluff unit was authorized by the Flood Control Act of 1944 (58 Stat. 887). The unit consists of two areas to be irrigated by pumping water from existing private canals that divert from the Bighorn River. The Highland Hanover area, containing 6,153 acres of irrigable land on the east side of the Bighorn River, will receive its water from the main canal of the Hanover irrigation district. The Upper Bluff area, containing 1,242 acres of irrigable land on the west side of the river will receive its water from the main canal of the Bluff irrigation district. Both new areas are assured an adequate water supply from the Boysen Reservoir, a feature of the Boysen unit, Missouri River Basin project.

Construction of the unit started in fiscal year 1955. The announcement of the availability of water is scheduled for the spring of 1958, though water may be furnished to some of the private lands during the irrigation season of 1957. The total estimated cost of the unit is \$3,566,500; \$3,502,303 is allocated to irrigation and \$64,197 to fish and wildlife. Operation and maintenance of the unit will be a joint activity with the old irrigation districts adjoining the new areas.

Highland Hanover irrigation district.—Under the contract signed April 8, 1955, part A provides for the payment by the district of \$1,430 a year for 30 years on the cost of the water supply works and part B provides that the construction charge obligation of \$513,800 for the distribution works will be repaid in 40 years.

Upper Bluff irrigation district.—Under the contract signed April 8, 1955, part A provides for the payment by the district of \$440 a year for 30 years on the cost of the water supply works and part B provides that the construction charge obligation

of \$158,760 for the distribution works will be repaid in 40 years.

The contract with each district provides a 10-year development period, after which repayment of construction charges will begin. The water users will repay a total of \$728,660 under the 2 contracts. The remainder of the reimbursable costs, amounting to \$2,773,643, will be repaid by surplus basinwide power revenues.

HEART BUTTE UNIT—HEART DIVISION, NORTH DAKOTA

Heart Butte unit is located on the Heart River in Grand and Morton Counties in southwestern North Dakota. State Highway No. 49 crosses Heart Butte Dam about 15 miles south of Glen Ullin and the irrigable areas extend eastward from there for about 60 miles along the Heart River to the city of Mandan. The unit is a multiple-purpose development designed to provide flood control for downstream areas, controlled conservation for irrigation of 13,100 acres, sedimentation control, fish and wildlife conservation and recreational benefits.

The principal features of the unit include a rolled-earth-fill dam with a glory-hole type spillway and outlet works, a 225,500 acre-foot reservoir, wildlife habitat areas to replace those inundated by the reservoir, and necessary pumping plants, laterals and drains to serve the irrigable lands. Construction of the dam was essentially completed in December 1949, and it has since played a major role in providing flood protection, particularly to the city of Mandan, N. Dak. Wildlife habitat replacement areas and minimum recreational facilities have been essentially completed. Construction of facilities to irrigate the 2,463 irrigable acres of the Western Heart River irrigation district was substantially complete as of June 30, 1956. Construction of irrigation facilities required to serve the rest of the 13,100 acres will not be started until appropriate repayment arrangements have been made.

The current estimated total unit cost is \$6,545,319, of which \$3,762,957 represents the cost of Heart Butte Dam and Reservoir. A total of \$1,557,639 is currently allocated to flood control and \$410,852 to fish and wildlife as nonreimbursable. Of the reimbursable cost, \$4,565,828 is allocated to irrigation and \$11,000 to recreation.

The reimbursable cost is scheduled for repayment as follows:

By irrigation water users (\$165,750 by the Western Heart River irrigation district plus \$718,250 future)-----	\$884, 000
By surplus basinwide power revenues-----	3, 681, 828
Total reimbursable-----	4, 565, 828

Heart Butte Dam and Reservoir are operated by the Bureau of Reclamation and financed by direct appropriation. Management of the reservoir area is the responsibility of the North Dakota State Game and Fish Department under a contract with that agency. Prior to the beginning of the 7-year development period, currently assumed to be January 1, 1958, water will be furnished to the landowners of the Western Heart River irrigation district on an interim basis, incidental to testing and priming of the system. The costs incurred, offset by revenues received, will be charged to construction accounts. The contract with the irrigation district provides that irrigation facilities will be operated by the water users. The districts' annual payments to the Mor-Gran-Sou Electric Cooperative, toward operation and maintenance of transmission facilities serving the pumping plants, are on a graduated schedule conforming to anticipated development of the irrigable acreage during the development period.

Repayment and water-service contracts.—The combination contract with the Western Heart River irrigation district provides that, following a 7-year development period, \$145,200 of the distribution facilities construction cost will be repaid in 40 years, and an estimated \$20,550 of the supply work construction cost will be repaid in 30 years. It also provides that the district will pay an allocated share of the water supply operation and maintenance cost.

CONTRACT

District: Western Heart River irrigation district.
 Date of contract: December 16, 1954.
 Date of initial water delivery: 1958.¹
 Type of contract: Combination repayment and water-service.
 Contract period (years): 40.
 Water service rates: Water service, \$0.30 per irrigable acre per year (the allocation of operation and maintenance costs on Heart Butte Dam and Reservoir).
 Repayment, \$3,630 per year for 40 years on distribution system and \$685 per year for 30 years on the supply works.
 As of June 30, 1957, no assessments have accrued under the contract.

¹ Water furnished on an interim basis prior to this date.

HELENA VALLEY UNIT—HELENA-GREAT FALLS DIVISION, MONTANA

The Helena Valley Unit is located in Lewis and Clark County near Helena, Mont.

The construction of this unit was authorized by the Flood Control Act of December 22, 1944 (58 Stat. 887), which approved the general comprehensive plan set forth in Senate Documents 191 and 475, as revised and coordinated by Senate Document 247, 78th Congress, 2d session.

Construction of the Helena Valley unit will provide for irrigation of 17,631 acres, of which full irrigation supply will be furnished to 7,775 acres of dry land and 5,233 acres now inadequately served by the rapidly deteriorating private pumping system and a supplemental irrigation supply for 4,623 acres presently receiving a partial supply by diversion from Prickly Pear, Silver, and Ten Mile Creeks. The Canyon Ferry Dam, a multiple-purpose structure, will store water to be lifted by hydraulic turbine-driven pumps to the Helena Valley tunnel. The water will flow by gravity through the 2.6-mile tunnel, passing under the Spokane Hills into Helena Valley. The Helena Valley Canal (34 miles long) will convey water around the south, west, and north sides of the bowl-shaped valley, terminating in a wasteway into Lake Helena. Helena Valley regulating reservoir, with an active capacity of approximately 10,600 acre-feet, will be located at Mile 11 of the Helena Valley Canal. A system of drains will provide for the disposition of excess surface and sub-surface water from the unit lands. A 58-mile-long lateral system including all appurtenant structures will be constructed for the unit.

This unit also will provide for the storage of water in the regulating reservoir for municipal use by the city of Helena.

Tentative allocation of the total estimated cost of the Helena Valley unit is as follows: Estimated total cost \$11,645,000; irrigation \$10,700,817, municipal water \$652,535, recreation \$6,000, and fish and wildlife \$285,648.

Repayment contracts.—The Helena Valley irrigation district, organized on June 28, 1955, consists of 13,008 irrigable acres for which distribution works will be built to furnish a full water supply. The District entered into a repayment contract, dated November 26, 1956, with the United States. Under this contract, it is estimated that the district will repay approximately \$800,000 on the construction cost of the irrigation

distribution and supply works in 40 years. On August 27, 1956, a municipal water supply contract was executed with the city of Helena under which it is estimated that the city will pay \$665,000 of the construction costs of this unit with interest in addition to \$32,000 of Canyon Ferry costs allocated to the city of Helena and \$31,000 interest during construction not shown in the unit cost. Repayment negotiations will be carried on with prospective supplemental water users when sufficient interest is shown by them for the supplemental irrigation of significant portions of the 4,623 acres which require a supplemental water supply.

CONTRACTS

- 1956, August 27: 40-year water-service contract with city of Helena pursuant to section 9 (c) (2) of the Reclamation Project Act of 1939. Minimum annual payment \$9,700 in advance, for which city entitled to 600 acre-feet of water delivered at outlet works of Helena Valley regulating reservoir. Additional water up to 5,680 acre-feet annually including the 600 acre-feet base quantity to be furnished on advance payment at rate of \$14 per acre-foot.
- 1956, November 26: 40-year combination water-service and repayment contract with Helena Valley irrigation district. Repayment obligation of \$726,914, payable in 80 equal successive semiannual installments after completion of 5-year development period. For annual water supply, district to pay full cost of operation and maintenance of water supply works plus 15 cents per irrigable acre.

JAMESTOWN UNIT—GARRISON DIVISION, NORTH DAKOTA

Jamestown unit is located on the James River in Foster and Stutsman Counties in east-central North Dakota. Jamestown Dam is about one-fourth mile north of Jamestown and the reservoir extends about 48 miles upstream from that city. It is a multiple-purpose unit with flood control for Jamestown and other cities being the initial purpose to be served. It will impound natural runoff and return irrigation flows from areas of the Garrison diversion unit for use on irrigable lands in the LaMoure and Oakes sections. Other benefits are: recreation, fish and wildlife, conservation, municipal water, and silt control.

The main feature of the unit is Jamestown Dam and Reservoir. The dam is of rolled earth-fill construction with a glory-hole type spillway and gated outlet works. The dam was designed to permit future installations for power generation when it becomes feasible, and it was so con-

structed that connections can be made to provide Jamestown with municipal water. The reservoir capacity is 230,000 acre-feet. Development of public-use and recreation facilities in the reservoir area is well advanced. Relocation of Arrowwood wildlife refuge facilities and installation of relief wells downstream from the dam remain to be done.

The estimated total cost of the unit is \$3,908,300, of which \$3,809,400 is for the Jamestown Dam and Reservoir. An amount of \$1,297,266 has been allocated to flood control and \$233,853 to fish and wildlife as nonreimbursable. The reimbursable cost has been allocated as follows:

Irrigation.....	\$2, 186, 160
Power.....	39, 679
Municipal water.....	71, 342
Recreation.....	80, 000

Total reimbursable.....	2, 377, 181
-------------------------	-------------

Jamestown Dam and Reservoir are operated by the Bureau of Reclamation, financed by direct appropriation. Management of the reservoir area is the responsibility of the Stutsman County Park Commission under an agreement with that organization.

This unit will function in connection with Garrison diversion unit now under investigation. Therefore, repayment negotiations have not been started.

KEYHOLE UNIT—CHEYENNE DIVISION, SOUTH DAKOTA

Keyhole Dam and Reservoir, located on the Belle Fourche River in Crook County, Wyo., was authorized by the Flood Control Act of 1944 (58 Stat. 887). The purposes of the Keyhole Dam and Reservoir are to provide supplemental water for the Belle Fourche irrigation district, water for irrigation of land in Wyoming, flood control, a source for municipal water and pollution abatement for the city of Belle Fourche, recreation, and fish and wildlife conservation. Under the terms of the Belle Fourche River compact, Wyoming is entitled to 10 percent of the unappropriated flow of the Belle Fourche River and as such may purchase up to 10 percent of the storage capacity of the reservoir for the development of lands and municipal water facilities in their state.

The major work involved is Keyhole Dam, a rolled earth-fill structure with a maximum reservoir capacity of 340,000 acre-feet. Water will be released from the outlet works of the dam into the

Belle Fourche River for its multiple uses. Construction of the dam was completed in 1952.

The total estimated cost of Keyhole unit is \$4,762,924, tentatively allocated as follows: irrigation \$2,275,886, flood control \$2,028,573, recreation \$91,000, and fish and wildlife \$367,465.

Keyhole Dam and Reservoir is being operated by the Bureau of Reclamation with appropriated funds. It is anticipated that a contract providing for delivery of water to the Belle Fourche project will be negotiated subsequent to agreement by the officials of Wyoming and South Dakota on the interpretation of the Belle Fourche River compact. As now contemplated, the proposed 40-year water-service contract to be negotiated with the Belle Fourche irrigation district will provide for specified water-service payments to cover appropriate irrigation operation and maintenance and construction costs.

The city of Belle Fourche passed a resolution dated June 9, 1950, indicating an interest in entering into an agreement with the United States Government to purchase water from the Keyhole Reservoir for industrial use, pollution abatement, and other municipal purposes.

CONTRACTS

1952, December 12: Interim contract with the Belle Fourche irrigation district providing for furnishing water at gates of the dam for the 1952 irrigation season at the rate of \$2.50 per acre-foot. Payments received by the Bureau under this contract totaled \$4,030.

1953, May 5: Interim contract with the Belle Fourche irrigation district providing for furnishing water at the gates of the dam for the 1953 irrigation season at the rate of \$2.50 per acre-foot. No water was delivered under this contract.

1954, July 28: Interim contract with the Belle Fourche irrigation district providing for furnishing water at the gates of the dam for the 1954 irrigation season at the rate of \$2.50 per acre-foot. Payments received by the Bureau under this contract totaled \$2,500.

1955, June 8: Interim contract with the Belle Fourche irrigation district providing for furnishing water at the gates of the dam for the 1955 irrigation season at the rate of \$2.50 per acre-foot. No water was delivered under this contract.

1956, May 25: Interim contract with the Belle Fourche irrigation district providing for furnishing water at the gates of the dam for the 1956 irrigation season at the rate of \$2.50 per acre-foot. Payments received to date by the Bureau under this contract total \$5,000.

KIRWIN UNIT—SOLOMON DIVISION, KANSAS

The Kirwin unit in Phillips, Smith, and Osborne Counties, Kans., will provide benefits from flood control, irrigation, fish and wildlife, and recreation. Principal features are the Kirwin Dam and Reservoirs, completed in 1955; the Kirwin Main, North and South Canals; and appurtenant distribution works now under construction for the irrigation of 11,500 acres along Solomon River between Kirwin and Portis, Kans.

Tentative allocation of the \$19,929,100 total estimated project cost indicates \$11,839,000 to be nonreimbursable for flood control and \$8,090,100 to be reimbursable for irrigation and recreation. The specific cost of recreation developments included as reimbursable is \$10,000.

The reservoir was constructed and operated initially for flood protection. A water service and repayment contract with the Kirwin irrigation district No. 1 was executed in June 1953 and amended October 18, 1955, to provide for acquisition of rights-of-way by the district. The construction obligation covering the distribution works is \$1,500,000, payable in 40 equal annual installments following a 5-year development period. Payments on construction of the water supply works will be made in the form of a construction component in water service charges. It is estimated that the component will amount to \$157,500 over the contract period. The irrigation district has assumed the responsibility for construction of such drainage works as may be required, the costs of which are estimated at \$607,000. Reimbursable construction costs beyond the payment capacity of the irrigation district will be amortized by power revenues of the Missouri River Basin project.

No payments have accrued under the contract.

WATER SERVICE CONTRACT

District.....	Kirwin irrigation district No. 1.
Date of contract.....	June 9, 1953; amended Oct. 18, 1955.
Date of initial water delivery.....	June 1957.
Type of contract.....	Combination 9 (d)-9 (c).
Contract period.....	40 years.
Water service rates.....	\$3,400, plus \$1 per acre-foot for water in excess of 14,000 acre-ft.

The summary of status of repayment contracts:

Total value of construction charge obligations_	\$1,500,000
Total matured charges.....	0
Total matured charges repaid.....	0
Total matured charges unpaid.....	0

KORTES UNIT—OREGON TRAIL DIVISION, WYOMING

The Kortes Dam, Reservoir, and powerplant was the first unit of the Missouri River Basin project to be built by the Bureau of Reclamation. Construction was started May 17, 1946, the first power generated in June 1950, and construction completed in March 1951.

Kortes Dam is situated on the North Platte River between Seminole Dam and Pathfinder Reservoir. Kortes powerplant takes advantage of the difference in head between Seminole and Pathfinder Reservoirs. The powerplant of 3 generating units has a capacity of 36,000 kilowatts. No storage or irrigation facilities are incorporated with the Kortes unit, the small capacity serving as a forebay pool for powerplant regulation only.

The entire construction cost of \$13,697,000 is allocated to power. The power allocation is repayable as a part of the total Missouri River Basin project power system within a period of 50 years with interest at 3 percent.

The Bureau of Reclamation operates the dam and powerplant and finances operation and maintenance costs directly.

LOWER MARIAS UNIT—MARIAS DIVI- SION, MONTANA

The Lower Marias unit is located in north-central Montana in Chouteau, Hill, and Liberty Counties. The main body of the unit lies approximately 30 miles north of Fort Benton, the county seat of Chouteau County, and about 33 miles southwest of Havre, the county seat of Hill County. Big Sandy and Box Elder lie in the eastern portion of the unit.

The Lower Marias unit was authorized by the Flood Control Act of 1944 (58 Stat. 887), which approved the general comprehensive plan set forth in Senate Documents 191 and 475, as revised and coordinated by Senate Document 247, 78th Congress, 2d session.

The major benefit of the multipurpose Lower Marias unit will be the irrigation of 127,000 acres of dry land. Other benefits are flood control,

recreation, silt control, fish and wildlife conservation, and municipal water.

The main features of the unit consist of Tiber Dam, Reservoir, Marais, Kenilgravity, and Sandy Gravity Canals, a complete lateral system, surface and subsurface drains, and Lonesome Lake Reservoir. Tiber Reservoir will have a storage capacity of 1,337,000 acre-feet. The Marias Canal will be about 77 miles in length and other major canals about 140 miles long. Lonesome Lake Reservoir, with a storage capacity of 20,000 acre-feet, will collect return flows to be reused for irrigation of approximately 17,000 acres served by the Sandy Gravity Canal.

To date, the Marias irrigation district, which was organized on June 7, 1950, has not entered into a repayment contract with the Government.

The contract for construction of Tiber Dam was awarded on September 12, 1952, and will be concluded during January 1957.

The total costs of \$70,187,000 are allocated as follows: irrigation \$61,902,000, power \$2,389,000, and recreation \$111,000. The flood control allocation of \$4,286,000 and fish and wildlife allocation of \$1,499,000 are nonreimbursable.

Tiber Dam will be operated by the Bureau of Reclamation.

OWL CREEK UNIT—BIGHORN BASIN DIVISION, WYOMING

Authorization for this unit was included in the general authorization for the Missouri River Basin project under the Flood Control Act of 1944 (58 Stat. 887). The development plan for the unit is primarily to construct Anchor Dam and Reservoir, the Lucerne pumping plant and Relift pumping plant, and appurtenant facilities. These will be used to provide the much needed supply of supplemental water for approximately 16,000 acres of land, some of which are Indian lands in the Arapahoe Ranch, from that portion of the water supply of Owl Creek which can be made available from storage at Anchor Reservoir and from the natural flow of the Bighorn River which may be supplemented from storage at Boysen Reservoir. The unit works are to be operated and administered so that the available water is distributed proportionately and equitably to all irrigated lands of the unit strictly in accordance with beneficial use and other applicable requirements of the laws of the State of Wyoming.

The estimated cost of construction on the Owl Creek unit is \$4,569,000, of which \$4,427,000 is allocated to irrigation, \$54,000 to flood control, and \$88,000 to fish and wildlife.

The unit is composed of three district areas: Lower (Lucerne and Dempsey), Middle, and South Fork, each of which has physical characteristics that necessitated separate studies thereon. Because of the more restricted crop adaptation at the higher elevation, the Middle and South Fork areas have a somewhat lower payment capacity than the Lower area.

In 1950 a contract was executed by the Owl Creek irrigation district, but execution by the United States was withheld because of the Wyoming Supreme Court decision which stated that the contract could not be enforced against objecting landowners until the excess land provisions were deleted from the contract. The excess land laws were made inapplicable to the Owl Creek unit by the act of August 28, 1954 (68 Stat. 690), after which the board of commissioners renewed their efforts in favor of constructing the unit. An order entered into on March 11, 1955, by the district court of Hot Springs County included in the district the lands of the former objectors. As a result of this and of further investigation, a new contract between the Owl Creek irrigation district and the United States was entered into on October 28, 1955, and construction of the Lucerne pumping plant and Relift was initiated. Completion of this portion of the unit will make it possible to obtain water from the Bighorn River or Boysen Reservoir for lands in the lower area. Beginning of construction of Anchor Dam is awaiting favorable negotiations with the Arapahoe and Shoshone Indians on the reservoir right-of-way.

Repayment contract.—The repayment contract with the Owl Creek irrigation district (October 28, 1955) provides for the repayment of \$23,269 each year for a period of 40 years after the Government gives the district notice that the construction of the Owl Creek unit will be sufficiently complete to permit the furnishing of the district water supply to district lands. The per-acre payments to be made by the water users were based upon a benefit factor, derived from a combination of three items, namely: (1) amount of supplemental water to be supplied, (2) regulation of natural flow rights, and (3) land classification. The contract also provides that the district shall as-

sume responsibility for the operation and maintenance of the Lucerne and Lucerne Relift pumping plants and the Anchor Dam and Reservoir on January 1 of the year following the year in which construction of the pumping plant and the dam are sufficiently complete to permit the furnishing of water to district lands. The Lucerne and Lucerne Relift pumping plants were completed during 1956. Water will be available for these pump lands of the district in 1957. The district is expected to assume responsibility for that portion of the unit on January 1, 1957. Construction of Anchor Dam will take additional time. Payments under this contract will amount to \$930,760 in a 40-year period.

If a contract can be negotiated on the same basis with the Arapahoe Indians, an annual payment of \$2,973 would result in a total construction payment of \$118,920 in 40 years. The balance of the reimbursable construction costs would be repaid by other sources of revenue in the Missouri River Basin project.

RAPID VALLEY UNIT—CHEYENNE DIVISION, SOUTH DAKOTA

Pactola Dam and Reservoir is located on Rapid Creek, a tributary of the Cheyenne River about 15 miles west of Rapid City in Pennington County, S. Dak. It was authorized by the Flood Control Act of 1944 (58 Stat. 887).

The purpose of the dam and reservoir is to provide municipal water for Rapid City and the Ellsworth Air Force Base; a full water supply for 2,200 acres of irrigable land and supplemental water for 8,900 acres in the Rapid Valley Conservancy District located along Rapid Creek downstream from Rapid City in Pennington County. Other purposes include much needed flood protection for Rapid City and lands adjacent to Rapid Creek, recreation, and fish and wildlife.

Pactola Dam is a zoned earthfill structure with a height of 220 feet above streambed and a length of 1,340 feet on the main crest. At top of conservation pool storage it has a storage capacity of 56,000 acre-feet with a surface area of 860 acres. Water is to be delivered and paid for at the outlet works of Pactola Dam. Rapid City will divert its water from Rapid Creek into the municipal water system at their pumping plant located on Rapid Creek near the city limits. Water for the Ellsworth Air Force Base

will be diverted through the same system. A definite plan for irrigation has not been completed as yet.

Total estimated cost of the Rapid Valley unit, of which Pactola Dam and Reservoir was essentially completed in 1956, is \$9,158,467, of which \$1,000,000 is applicable to the United States Air Force as its share for a water supply and is non-reimbursable. The total estimated cost is allocated as follows: irrigation \$3,315,425, municipal water \$1,785,000, United States Air Force \$1,000,000, flood control \$2,368,353, and fish and wildlife \$689,689. The dam is to be operated by the United States Government with funds advanced by Rapid City.

Municipal water-service contract.—A water-service contract was executed with Rapid City on October 20, 1952. The city will make payments to the United States in accordance with the following schedule:

Water year of payment	Basic total annual intake of city's water system	Basic annual payment
	<i>Acre-feet</i>	
1 to 5-----	6, 200	\$24, 000
6 to 10-----	6, 900	36, 000
11 to 15-----	7, 700	48, 000
16 to 20-----	8, 500	60, 000
21 to 25-----	9, 300	73, 000
26 to 30-----	10, 000	84, 000
31 to 35-----	10, 700	96, 000
36 and annually thereafter-----	11, 400	107, 000

The contract provides for additional water to be purchased by the city as needed and if water is available for such use. The contract further provides that Rapid City shall, if so requested, furnish the Ellsworth Air Force Base with not more than 1,810 acre-feet of water per annum at a reasonable cost for the handling, treatment, and delivery of such water. Water in excess of the 1,810 acre-feet may be furnished upon such terms as the city and the Air Force base may agree upon.

The municipal water contract:

Organization-----	City of Rapid City, S. Dak.
Date of contract-----	Oct. 20, 1952.
Type of contract-----	Water service.
Contract period-----	40 years.
Date of initial water delivery.	Estimated 1958.
Rate of payment-----	On a graduated scale, increasing every 5 years over a 40-year period beginning with \$24,000 and ending with \$107,000 per annum.

The summary of status of municipal water-service contract:

Total value of contracted repayments-----	\$2, 640, 000
Total matured charges-----	0
Total matured charges repaid-----	0
Total matured charges unpaid-----	0

A repayment contract for irrigation water supply will be executed prior to delivery of water.

ST. FRANCIS UNIT—UPPER REPUBLICAN DIVISION, COLORADO

The St. Francis unit is located in Yuma County in northeastern Colorado. The principal features are the Bonny Dam and Reservoir, Armel pumping plant and a canal and lateral system to serve 6,000 acres of land currently dry farmed. The unit also contains 750 acres of irrigated land requiring a supplemental water system.

Bonny Dam and Reservoir, authorized by the Flood Control Act of 1944 (58 Stat. 887), was completed in 1951. Construction of the remaining features of the unit are being deferred pending organization of the water users and negotiation of a repayment contract.

The total estimated construction cost is \$16,915,057, of which \$10,954,057 is tentatively allocated to flood control, and \$8,000 to fish and wildlife as nonreimbursable, and \$5,915,000 to irrigation, and \$38,000 to recreation as reimbursable.

Bonny Dam and Reservoir is being operated primarily for flood control. Substantial benefits, as anticipated, are accruing to fish and wildlife and to recreation. Public use of this facility has exceeded expectations. Since 1951 surplus irrigation water stored in the reservoir has been made available on an annual basis and water-rate charge to irrigators with stream-flow rights in need of a supplemental supply.

SARGENT UNIT—MIDDLE LOUP DIVISION, NEBRASKA

The Sargent unit in central Nebraska is being developed primarily for the irrigation of 17,560 acres of land along the Middle Loup River between the towns of Milburn and Comstock. The principal project works consist of the Milburn diversion dam to serve lands on both sides of the river, the Sargent Canal with appurtenant laterals and a small pumping installation to serve about 13,740 acres north of the river, the Lillian Canal with appurtenant laterals to serve about 3,820 acres south of the river, the Lillian powerplant (4,400-

kilowatt), and the drainage works. Construction of the powerplant and facilities to serve the area south of the river is being deferred.

The total estimated project cost of the Sargent unit is \$14,946,000, of which \$234,600 is allocated to flood control as nonreimbursable, and the balance to irrigation and power as reimbursable. The reimbursable allocation is \$8,416,400 to irrigation and \$6,295,000 to power.

A water service and repayment contract made September 11, 1954, with the Sargent irrigation district was amended March 23, 1957, as a part of interrelated water service, repayment, and operating arrangements among the Sargent irrigation district, the Farwell irrigation district, and the Loup Basin reclamation district. The 3 interrelated contracts with the 3 districts were all executed March 23. Under this arrangement, the Loup Basin reclamation district has a water-service contract with the United States and will deliver water to the 2 irrigation districts under service contracts with each. The Loup Basin reclamation district will operate and maintain the water-supply works serving each irrigation district and may, under the aforementioned service contracts, also operate and maintain the distribution works.

The repayment contract with the Sargent irrigation district, as amended, contains a construction charge obligation in the amount of \$1,785,400 to cover the costs of constructing the distribution works and the portion of the drainage works required immediately. The district is to construct additional drainage facilities, estimated to cost \$723,300, as required in the future. The Sargent district's construction charge obligation of \$1,785,400 is to be apportioned between the two irrigation blocks, one comprising the lands under the Sargent Canal, and the other the lands under the Lillian Canal. The Sargent district will pay the sum of the annual installments based on a 40-year repayment period following a 10-year development period for each block.

Although the Sargent irrigation district will not make any water-service payments to the United States, its potential share of the water-service payments to be made by the Loup Basin reclamation district is estimated at \$772,000 during the 40-year period of the Loup Basin contract. Substantial portion of that payment will be obtained from an ad valorem tax applied to property in the Reclamation district. All water-service charges to the Loup Basin reclama-

tion district, both fixed annual charges and additional water charges, will constitute net returns to the United States to apply on the costs of constructing the water supply works. Reimbursable construction costs in excess of the payment capacities of the districts will be amortized by power revenues from the Missouri River Basin project.

The summary of status of repayment contracts:

Total value of construction charge obligations.....	\$1,785,400
Total matured charges.....	0
Total matured charges repaid.....	0
Total matured charges unpaid.....	0

SAVAGE UNIT—YELLOWSTONE DIVISION, MONTANA

Savage unit, 2,216 acres of irrigable land, is a pumping unit of the Missouri River Basin project.

On July 14, 1948, Savage irrigation district entered into a repayment contract with the United States. Construction was completed on December 6, 1949, with water delivered in May 1950, and on August 8, 1950, the board of control of the Lower Yellowstone project assumed operation of the unit under "Agreement among the United States, Lower Yellowstone irrigation districts Nos. 1 and 2 and Savage irrigation district" dated February 1, 1949. The major irrigation works include a pumping plant having 42-cubic-foot-per-second capacity and an 84-foot lift; single 1,370-foot discharge line; 7.8 miles of main canal and 6.2 miles of laterals.

The total construction cost of the unit is estimated at \$560,000. \$546,000 is allocated to irrigation and \$14,000 to fish and wildlife. Of this amount, the water users will return \$143,750 on distribution system costs, plus an undetermined amount on the supply system costs. The remainder is to be covered by other sources of revenue from the Missouri River Basin project.

Repayment and water-service contracts.—The construction cost of the distribution works will be repaid over a 40-year period following an 8-year development period which started in 1950. The annual installments will amount to \$3,594.

The water-service contract for use of the supply works is for 40 years, beginning the first year water was delivered. The variable payment formula has been employed and the annual charge is obtained by multiplying the product

of the base charge (\$5,833 per year) and a production index factor (current gross crop value by base crop value—\$39.70 per acre) by the agricultural parity price ratio. This charge shall not be more than 200 percent nor less than 25 percent of the base charge, but in no case less than operation and maintenance of the supply works. Of the \$5,833 per year water-service payment, it is estimated that \$950 per year will represent the return to construction costs of water supply works.

The summary of status of repayment contracts:

Total value of contracted repayment.....	\$143,750
Total matured charges.....	85
Total matured charges repaid.....	85
Total matured charges unpaid.....	0

SHADEHILL UNIT—GRAND DIVISION, SOUTH DAKOTA

The Shadehill Dam and Reservoir is located on the Grand River in Perkins County, S. Dak. It was authorized by the Flood Control Act of 1944. Construction of the dam was completed in 1951. Its purpose is to provide for flood control, water for irrigation of approximately 9,000 acres of land in Perkins and Corson Counties, recreation, and fish and wildlife conservation. A municipal water supply for the town of Lemmon may be obtained from the reservoir.

The completed feature is Shadehill Dam, an earthfill structure which will store 358,000 acre-feet of water; an additional 109,000 acre-feet of superstorage is provided for emergency flood control. Construction of additional facilities to permit the irrigation of land, and to supply water for municipal purposes, will not be undertaken until the quality of water has been determined to be satisfactory and water service and repayment arrangements have been completed.

The total estimated cost of the Shadehill unit is \$7,400,743, which has been allocated tentatively as follows: Irrigation, \$4,392,710; recreation, \$19,000; flood control (nonreimbursable), \$2,683,132; and fish and wildlife, \$305,901.

Shadehill Dam and Reservoir is being operated by the Bureau of Reclamation with appropriated funds.

TRANSMISSION DIVISION

The Transmission division of the Missouri River Basin project includes the necessary facilities required to market power and energy generated at

powerplants in the Missouri River Basin area. This area comprises all or parts of the 10 States of Montana, Wyoming, Colorado, North Dakota, South Dakota, Nebraska, Kansas, Minnesota, Iowa, and Missouri. The purpose of the transmission system is to make power and energy generated at reservoir projects under control of the Army Department and multipurpose projects of the Bureau of Reclamation available in wholesale quantities for sale to facilities owned by the Federal Government, public bodies, cooperatives, and privately owned companies. Generating capacity—now existing, under construction, scheduled, and planned—exceeds 2,380,000 kilowatts in the Missouri River Basin area.

Major features of the transmission system as presently designed and scheduled consist of approximately 2,018 miles of 230,000-volt transmission lines, of which nearly 600 miles are double-circuit, 5,507 miles of 115,000-volt transmission lines, 796 miles of 69,000-volt transmission lines and additional lower voltage lines as required, in addition to transmission substations with an aggregate installed transformer capacity of about 3,100,000 kilovolt-amperes. Additional substation capacity and some line extensions will be required, but locations and size of transformers cannot presently be determined with enough finality or accuracy to prepare specific construction schedules. The estimated cost provides for these additional investments. Associated general property investments, such as adequate dispatching and communication system, essential warehouses, shops, repair and transportation equipment, are also major items of the transmission system as presently developed.

The total estimated cost of the Transmission division is \$297,198,000. This sum is fully reimbursable and is allocated entirely to the power system of the Missouri River Basin project for repayment from sale of power and energy under existing and proposed future delivery contracts with cooperatives, municipalities, Federal authorities, and private utilities.

Of the 222 customers supplied in 1956, revenues from 192 were under \$100,000 each. The major remaining customers are tabulated below. Major wheeling contracts are also included.

The features of the Transmission division will be operated and maintained by the United States and will be financed directly from funds appropriated for that purpose.

WEBSTER UNIT—SOLOMON DIVISION,
KANSAS

The Webster unit in Rooks and Osborne Counties, Kans., is being developed to control floods on the South Fork of the Solomon River, and to irrigate 8,500 acres of land. Incidental benefits will accrue from fish and wildlife and recreation. Principal features are the Webster Dam and Reservoir, completed in June 1956; the Woodston Diversion Dam; the Osborne Canal, now under construction; pumping installations to serve a small area; and appurtenant laterals and drainage works.

The total estimated cost of \$16,549,200 is allocated: \$7,778,000 for flood control, and \$16,000 for fish and wildlife as nonreimbursable, and \$8,712,200 for irrigation and \$43,000 for recreation as reimbursable.

A water-service and repayment contract was signed April 24, 1957, with the Webster irrigation district No. 4. It contains a construction charge obligation of \$1,172,000 to cover the cost of the distribution works and drainage system required immediately. The District is to construct addi-

tional drainage facilities, estimated to cost \$272,000, as required in the future. Under the water-service provisions of the contract, the district will pay a fixed annual charge of \$3,700, estimated to cover its share of the cost of operation and maintenance of the reserved works, for delivery of three-fourths of its water supply plus \$1 per acre-foot for additional water. It is also estimated that the additional water charge will return \$157,500 in the 35 years following the development period toward the costs of constructing the water supply works. Reimbursable construction costs beyond the payment capacity of the irrigation district will be amortized by surplus power revenues from the Missouri River Basin project.

The district's construction charge obligation is payable in 40 equal annual installments following a 5-year development period.

MOON LAKE PROJECT

ROOSEVELT, UTAH

The Moon Lake project in Duchesne County, Utah, was found feasible by the Secretary on January 11, 1935, and approved by the President on November 6, 1935, pursuant to the acts of June 25, 1910 (36 Stat. 836), and December 5, 1924 (43 Stat. 702). Funds for construction of the project were provided by emergency relief acts commencing with the National Industrial Recovery Act of June 16, 1933.

The project was developed to furnish a supplemental water supply to about 75,000 acres of irrigable land. Project features include the Moon Lake Dam and Reservoir, Midview Dam and Reservoir, Yellowstone feeder canal, Duchesne feeder canal, and Midview lateral.

The total cost of constructing the project features was \$1,599,359 excluding \$200,500 of reimbursable CCC costs. The entire amount, plus operation and maintenance funded, less contributions of \$8,093, is repayable under the terms of the repayment contract with the Moon Lake Water Users Association.

The project is operated by the Moon Lake Water Users Association.

CONTRACTS

1934, June 22; 1939, March 20; and 1939, November 3: Contract IIR 962 with Moon Lake Water Users Association for construction of Moon Lake Dam and Reservoir. Estimated cost, \$1,600,000, payable in 40 equal annual installments.

NEWLANDS PROJECT

FALLON, NEV.

The Newlands project (formerly the Truckee-Carson project), one of the first Reclamation projects constructed, conserves water from the Truckee and Carson Rivers to irrigate approximately 87,500 acres in Churchill County, Nev. The project was authorized by the Secretary of the Interior on March 14, 1903.

The original project features include Lahontan Dam and Reservoir, outlet works of Lake Tahoe, Derby Diversion Dam on the Truckee River, Carson Diversion Dam on the Carson River, Lahontan powerplant with an installed capacity of 1,640 kilowatts, Truckee Canal, 31 miles long, 73 miles of main canals, 504 miles of laterals, and 339 miles of open drains. The Truckee-Carson irrigation district has either acquired or constructed the following project features: Donner Lake storage space and outlet works, "S" canal regulating reservoir, Coleman and Sagouspe diversion dams on Carson River, Lahontan-Swingle Bench pumping plant, extension of lateral and drainage systems, a 2,000-kilowatt diesel powerplant and an 800-kilowatt hydroelectric powerplant on the "V" canal.

The total actual cost of constructing the Newlands project features was \$7,895,022. The entire amount, with the exception of the congressional chargeoff and other cost adjustments to be made, is repayable under the terms of the repayment contract with the Truckee-Carson irrigation district. The act of May 5, 1926, authorized the cancellation of \$4,462,070 construction charges.

Operation and maintenance of the project was transferred to the Truckee-Carson irrigation district on December 31, 1926.

Repayment contracts.—The Truckee-Carson irrigation district made its first payment on construc-

tion costs in 1907 as scheduled in public notice dated December 17, 1907. The December 18, 1926, contract with the district provided that the cost of the project features would be repaid in 40 years.

PUBLIC NOTICES AND CONTRACTS

- 1907, May 6: Public notice. Construction charge \$22 per acre, payable in 10 equal annual installments.
- 1907, November 1: Public notice. Construction charge \$30 per acre, payable in 10 equal annual installments.
- 1914, August 19: Public notice. Construction charge \$60 per acre, payable in 20 graduated annual installments.
- 1916, February 11: Public notice. Construction charge \$60 per acre, payable in 20 graduated annual installments.
- 1917, October 30: Public notice. Supplemental construction for certain lands, rate \$10 per acre, payable in 2 equal annual installments.
- 1918, April 10: Public notice. Construction charge \$65 and \$115 for leveled land, payable in 20 graduated annual installments.
- 1920, October 19: Public notice. Construction charge \$80 per acre, payable in 20 graduated annual installments.
- 1921, January 22: Contract IIR-560 with Truckee-Carson irrigation district for construction of a drainage system at estimated cost of \$700,000, payable in 40 equal semiannual installments.
- 1925, April 30: Contract with Truckee-Carson irrigation district for additional drainage work at estimated cost of \$270,000, payable in 14 equal semiannual installments beginning January 1, 1946.
- 1926, December 18: Contract IIR-93 with Truckee-Carson irrigation district. District assumes obligations under individual water-right applications. Time of repayment extended to 40 years. Additional construction work on Derby Dam and Truckee Canal. Assumption of deficit of \$500,000 to be paid from new water-right applications at \$54 per acre up to January 1, 1942, and balance on that date in 60 equal semiannual installments.

1935, July 1: Agreement between the United States, Truckee-Carson irrigation district, Washoe County water conservation district, Sierra Pacific Power Co., and other users of the waters of Truckee River, to further conserve the waters of Lake Tahoe and Truckee River by combination of storage features which should be so operated as to conform with present decrees and rates of river flow at designated gaging stations and at the same time permit additional benefits to be obtained.

1944, June 14: Contract with Truckee-Carson irrigation district. Deficit to be paid only from water-right applications at \$54 per acre upon lands not under water-right applications on January 1, 1942, with a repayment period not to exceed 40 years.

1955, March 10: Contract with Truckee-Carson irrigation district grants to the district, for a period of 50 years, a license to construct, operate and maintain the diesel powerplant and the "V" canal powerplant on lands described in the contract. Net power revenues received by the district from the two plants are to be credited first to the construction cost of said plants, including replacements, interest and carrying charges; second, to the payment of annual obligations of the district to the United States; and then as the district may determine.

The summary of status of the Truckee-Carson irrigation district repayment contracts:

Total value of contracted repayment.....	\$3, 257, 749
Total matured charges.....	2, 791, 864
Total matured charges repaid.....	2, 791, 864
Total matured charges unpaid.....	0

The allocation and repayment of costs:

Total project cost.....	\$7, 895, 022
Allocation to irrigation:	
Reimbursable.....	3, 432, 952
Chargeoff by Congress, act of May 25, 1926.....	4, 462, 070
Total.....	7, 895, 022

Repayment of reimbursable costs:

Total, reimbursable costs.....	\$3, 432, 952
Operation and maintenance funded.....	68, 739
Interest and penalties funded.....	14, 886
Subtotal.....	3, 516, 577
Less:	
Revenues.....	32, 600
Contributions.....	1, 453
Pending adjustment.....	224, 775
Subtotal.....	258, 828
Total repayment obligation.....	3, 257, 749

¹ Decrease. Decreases are due to cancellations of water-right applications and to deferment of charges under the relief acts. 1915. Reclamation Extension Act, Aug. 13, 1914.
² Increase of obligation covers drainage construction under 1921 contract.

³ Increase due to additional obligations assumed under 1926 contract.
⁴ Moratorium period. Acts of Apr. 1, 1932, Mar. 3, 1933, Mar. 27, 1934, June 13, 1935, and Apr. 14, 1936. Total amount of construction charges deferred under these acts, \$401,232.

NEWTON PROJECT

NEWTON, UTAH

The construction of Newton project in Cache County, Utah, was approved by the President on October 17, 1940, under the terms of the Water Conservation and Utilization Act of August 11, 1939 (53 Stat. 1418), as amended. A supplemental finding pursuant to the July 16, 1943, amendment to the WCU Act (57 Stat. 566) was approved by the President on August 31, 1943.

The project was developed to furnish an adequate and dependable water supply to 2,200 acres of land. Project features include Newton Dam and Reservoir on Clarkston Creek, to replace an old dam built by the irrigators in 1871, and distribution canals.

The total cost of constructing the project features was \$712,591. The reimbursable portion of this cost, \$350,155, is repayable under the terms of the repayment contract with the Newton Waters Users Association.

The operation and maintenance of the project works was transferred to the Newton Water Users Association on January 1, 1948, at the conclusion of the 2-year development period.

CONTRACT

1941, August 29, and 1945, June 1: Contract No. Ilr-1358 with Newton Water Users Association for construction of Newton Dam and Reservoir. Reimbursable cost, \$350,000, payable in 40 equal annual installments.

NORTH PLATTE PROJECT

WYOMING—NEBRASKA

The North Platte project is located in southeastern Wyoming and western Nebraska along the North Platte River. Originally called the Sweet-water project, it was authorized by the Secretary of the Interior on March 14, 1903, under the Reclamation Act of 1902 (32 Stat. 388), and later approved by the President on January 5, 1911. Pathfinder Dam and Reservoir were authorized by the Secretary May 3, 1904. The addition of the Fort Laramie unit, which included the Lingle powerplant, was approved August 16, 1912, under the original authorization. Guernsey Dam and powerplant were found feasible by the Secretary April 29, 1925, and approved by the President April 30, 1925, under the terms of the act of December 5, 1924 (43 Stat. 672). Construction began in 1905, and the first irrigation deliveries were made in the season of 1908. Construction of all segments was completed in the midtwenties.

The main features include Pathfinder Dam and Reservoir, Guernsey Dam and Reservoir, Whalen diversion dam, the drainage diversion works, three regulatory reservoirs (Lake Alice, Lake Minatare, and Lake Winters Creek), 4,800-kilowatts at Guernsey powerplant, 1,618 miles of canals and laterals, 373 miles of project drains, and 205 miles of transmission lines. Lingle powerplant of 1,400-kilowatts was placed on a non-operating status May 1, 1956.

The following features constitute the "reserved" works which are operated and maintained by the Bureau: Pathfinder Dam and Reservoir, Guernsey Dam and Reservoir, Whalen diversion dam, the drainage diversion works, the Guernsey powerplant, and the power transmission facilities. The water users, including the Warren Act contractors, advance their appropriate share of the cost of operation and maintenance of the "reserved" works. The remainder of the project works have been operated and maintained by the four project irrigation districts at no cost to the United States since January 1, 1927.

The project was constructed at a cost of \$19,915,823, entirely repayable by the water users. However, the act of July 17, 1952 (Public Law 578), provided for acquisition of the water-users interests in the power revenues to the extent of \$6,636,873, thereby permitting a similar reduction in the remaining amount to be paid. As of June 30, 1957, an additional \$3,427,229 had been accomplished in rehabilitation and betterment work in a program totaling about \$5,660,000. In addition, under this program, the irrigation districts have agreed to perform deferred maintenance work to a generally similar extent with district funds.

The project is composed of four divisions. The Interstate division is composed of the project lands in Wyoming and Nebraska on the north side of the river served by the Interstate Canal. The "transferred" works serving this division are operated and maintained by the Pathfinder irrigation district, which contains about 98 percent of the project land in the division. The Pathfinder irrigation district also acts as fiscal agent for the United States in matters dealing with the unorganized project lands in Wyoming and Nebraska, and with two Warren Act contractors served by the Interstate Canal. The Fort Laramie division is composed of the project lands in Wyoming and Nebraska on the south side of the river served by the Fort Laramie Canal. The portion of this division in Wyoming is represented by the Goshen irrigation district, which operates and maintains the "transferred" works within its boundaries. The portion in Nebraska is represented by the Gering-Fort Laramie irrigation district, which operates and maintains the "transferred" works within its boundaries. The Northport division is located north of the river downstream from the Interstate division. It is composed of the project lands served by the Drainage Diversion Works and the Northport Canal and is represented by the Northport irrigation district, which operates and

maintains the "transferred" works within its boundaries. The Northport irrigation district uses the Farmers' Canal as a carriage facility and shares in its cost of operation and maintenance with the Farmers' irrigation district. The Storage division is composed of the lands of the Warren Act contractors.

The project uses water of the North Platte River to irrigate adjacent lands in Goshen County, Wyo., and in Scotts Bluff, Sioux, and Morrill Counties in Nebraska. Irrigation was started in the Interstate division in 1908, in the Fort Laramie division in 1918, and in the Northport division in 1922. Currently there are 338,670 acres of irrigable land being served by project works, of which 228,878 acres are associated with the 4 irrigation districts representing the project lands and 109,792 acres are represented by 10 districts and canal companies under Warren Act contracts. In addition, from time to time in the past, when stored water supply would permit, project water has been made available to some 34,700 acres in private districts under temporary annual, water-rental arrangements.

INTERSTATE DIVISION

Pathfinder irrigation district.—Of 102,824 acres of irrigable land in the division, 100,556 acres are in the Pathfinder irrigation district in Nebraska. This district, however, acts as agent for the Government in operation and maintenance and fiscal matters involving the remaining project lands, of which 1,878 acres are in unorganized tracts in Wyoming and 393 acres in nondistrict tracts in Nebraska. The Pathfinder district operates and maintains the project works below station No. 2 of the Interstate Canal including the Interstate Canal, laterals, drainage system and excluding the Drainage Diversion Works, Lake Alice, and Lake Minatare.

Repayment contracts.—The Interstate division was the first part of the project constructed and placed under irrigation. Water service was furnished from 1908 to 1927 under individual water-right application and public notice. The Pathfinder irrigation district was organized in 1926. It assumed the obligations of the consenting lands in Nebraska and entered into a contract accordingly to repay its portion of the project construction costs. The contracts with the individual, nonconsenting landowners in Nebraska and the unorganized, individual landowners in Wyoming remain in effect.

Contracts with the nonconsenting landowners in Nebraska total \$98,453. Contracts for acquisition of their interest in the power revenues in accordance with Public Law 578 dated July 17, 1952, have been offered to them but not yet accepted. The Pathfinder irrigation district acts as fiscal agent for the United States.

Contracts with the nondistrict individual landowners in Wyoming total \$159,224. Contracts for acquisition of their interest in the power revenues in accordance with Public Law 578 dated July 17, 1952, have been offered to them but not yet accepted. The Pathfinder irrigation district acts as fiscal agent for the United States.

CONTRACTS

Pathfinder irrigation district

- 1926, July 31: Original repayment contract assumed obligation of individual water-right applications for the "consenting" lands therein. Delinquent charges were funded. Installments were based on 5 percent of the 10-year running average gross crop value. Total contract amount estimated at \$9,048,000.
- 1949, October 19: Rehabilitation and betterment contract IIr-1560 in the amount of \$32,300, payable in 10 equal annual installments upon contract execution. (Actual obligation of the district for its share of the rehabilitation and betterment of Pathfinder Dam and Reservoir, and to be repaid, is estimated at \$51,400.)
- 1952, September 22 (effective May 31, 1951): Contract IIr-14-06-W-5 amended the original repayment contract by providing for acquisition of the power interests and fixed annual installments. The district's share of the total project costs designated as \$9,053,763 and the current balance, after allowing \$2,982,353 for the water user interests in power revenues, restated as \$1,200,539, payable in 44 graduated annual installments beginning June 1, 1951.
- 1955, December 7: Contract 14-06-700-935 for rehabilitation and betterment of the Cottonwood Siphon (Interstate Canal) in the amount of \$200,000, payable in five equal annual installments beginning June 30, 1957.

Other contractors

- North Platte Canal and Colonization Co.—Contracts dated September 3, 1907, and December 24, 1914, purchased 54,000 acre-feet of water from the Interstate Canal for \$10,000 in lieu of construction charges.
- Farmers' irrigation district.—Special contract June 16, 1917, for construction of Lower Nine Mile drain in the amount of \$61,851, payable in 10 equal annual installments; also May 31, 1918, a special contract for 25 percent of the construction cost of Wild Horse drain in the amount \$24,927, payable in 10 equal annual installments.

Alliance irrigation district.—Special contract Ilr-478, May 31, 1918, covering drainage construction in the amount of \$2,657, payable in 10 graduated annual installments.

City of Bayard.—Special contract Ilr-478, May 31, 1918, covering drainage construction in the amount of \$24,380, payable in 10 graduated annual installments.

The summary of status of the Interstate division repayment contracts on June 30, 1957:

Total value of contracted repayment.....	\$9, 430, 751
Total matured charges.....	8, 381, 132
Total matured charges repaid.....	8, 380, 026
Total matured charges unpaid.....	1, 106

FORT LARAMIE DIVISION

Goshen irrigation district.—This district contains 52,484 acres of irrigable land in Wyoming south of the North Platte River. The district operates and maintains the project works below station 12 of the Fort Laramie Canal to the State line including the canal, laterals, and drainage system but excluding the Lingle powerplant. The cost of operation and maintenance of the canal and certain laterals serving both districts is shared by the Gering-Fort Laramie district.

CONTRACTS

1926, November 24: Original contract in the estimated amount of \$5,092,991, with payments based on 5 percent of the 10-year running average gross crop value.

1927, July 7: Amendment providing for operation and maintenance of certain project works by the Goshen district.

1949, July 8: Rehabilitation and betterment contract Ilr-1558 for \$3,458,700, to be repaid in 40 annual installments of \$87,000 beginning the year following the last construction installment.

1952, September 22 (effective November 30, 1951): Contract Ilr-14-06-W-4 amended both the original repayment contract and the rehabilitation and betterment contract. The district's share of the total project construction cost designated as \$4,585,812 and the current balance, after allowing \$1,556,699 for the water users interest in power revenues, restated as \$1,421,204, payable in 45 graduated annual installments beginning December 1, 1951. The rehabilitation and betterment program was reduced to \$2,000,000, payable in 71 graduated annual installments beginning December 1, 1984.

The summary of status of the Goshen irrigation district's repayment contracts on June 30, 1957:

Total value of contracted repayment.....	\$6, 585, 812
Total matured charges.....	3, 379, 408
Total matured charges repaid.....	3, 379, 408
Total matured charges unpaid.....	0

Gering-Fort Laramie irrigation district.—This district contains 54,845 acres of irrigable land in Nebraska south of the North Platte River. The district operates and maintains all project works within its boundaries beginning with the Fort Laramie Canal at the State line.

CONTRACTS

1920, May 25: Original contract in the amount of \$5,250,000, payable in 20 equal, annual installments.

1926, November 2: Amendment converting the repayment installments to 5 percent of the 10-year running average gross crop value.

1927, June 7: Amendment providing for operation and maintenance of certain project works by the Gering-Fort Laramie district.

1949, July 5: Rehabilitation and betterment contract Ilr-1559 for \$4,446,600, to be repaid in 40 annual installments of \$112,000 each.

1952, September 22 (effective June 30, 1951): Contract Ilr-14-06-W-6 amended both the original repayment contract and the rehabilitation and betterment contract. The district's share of the total project construction cost designated as \$4,818,334 and the current balance, after allowing \$1,626,734 for the water users interest in power revenues, restated as \$1,097,082, payable in 43 graduated annual installments beginning July 1, 1951. The rehabilitation and betterment program was reduced to \$1,500,000 payable in 63 graduated annual installments beginning July 1, 1974.

The summary of status of the Gering-Fort Laramie irrigation district's repayment contracts on June 30, 1957:

Total value of contracted repayment.....	\$6, 318, 334
Total matured charges.....	3, 980, 953
Total matured charges repaid.....	3, 980, 953
Total matured charges unpaid.....	0

Other contractors

The Union Pacific Railroad Co. signed contracts in 1921, 1924, and 1927 for repayment of construction charges on rights-of-way in the amount of \$60,280. The Holly Sugar Corp. signed contract Ilr-577 April 29, 1929, for repayment of construction charges on a beet-dump site in the amount of \$312. The Great Western Sugar Co. signed contract Ilr-697 on August 1, 1932, for repayment of construction charges on a beet-dump site in the amount of \$100. As of June 30, 1956, these three contractors had paid their obligations in full.

The summary of status of these other contractors' repayment contracts:

Total value of contracted repayment.....	\$60, 692
Total matured charges.....	60, 692
Total matured charges repaid.....	60, 692
Total matured charges unpaid.....	0

NORTHPORT DIVISION

Northport irrigation district.—This district comprises all of the irrigable land in the division. This was the last of the divisions to be constructed. The district's water supply is transported via the Farmers' Canal and much of it is obtained via the Drainage Diversion Works. The district currently contains 16,170 acres of irrigable land, of which 2,555 acres have been tentatively classified as nonirrigable. This district has been in financial difficulties since its organization, causing postponement of certain payments and several amendments of the repayment contract.

CONTRACTS

- 1924, February 24: Original repayment contract in the amount of \$1,050,000 payable in 20 graduated annual installments.
- 1926, November 24: Amendatory contract Ilr-80 increasing the obligation by the penalties, operation and maintenance deficits, and transferred equipment and supplies, also converting installments to 5 percent of the 10-year running average gross crop value.
- 1934, April 1: Amendatory contract providing for 40 graduated installments and crediting power revenues separately, of which \$6,000 annually to Farmers' irrigation district for Northport's share of water transportation costs.
- 1948, August 19: Amendatory contract—reduced installments to \$3,500 on total obligation of \$952,046 beginning June 1, 1949. All or part of the \$3,500 may be applied on Farmers' irrigation district carriage costs if district's share of annual power revenues are insufficient.
- 1949, August 2: Rehabilitation and betterment contract Ilr-1562 in the amount of \$7,950, payable in 10 installments beginning on contract execution and remainder on April 1 each year.

In 1957 a contract was negotiated with the Northport irrigation district for United States acquisition of water user interest in power revenues. The \$479,602 amount of settlement is to be retained by the United States and is to be applied in amounts of not more than \$8,000 per year, commencing with the year 1958, toward payment of the annual cost of carrying the Northport district's water through the Farmers' irrigation district canal. No change made in provisions cited under August 19, 1948, amendatory contract. (See above.) Power settlement contract was approved by act of August 13, 1957 (71 Stat. 342), and is dated March 6, 1958.

The status of the Northport irrigation district's repayment contracts, including rehabilitation and betterment, as of June 30, 1957:

Total value of contracted repayment.....	\$1, 120, 414
Total matured charges.....	196, 221
Total matured charges repaid.....	196, 221
Total matured charges unpaid.....	0

STORAGE DIVISION

The construction costs of the storage facilities in the Storage division are charged in part to the Goshen, Gering-Fort Laramie, Pathfinder, and Northport irrigation districts as a part of their total construction obligations and in part to 10 irrigation districts and canal companies under Warren Act contracts. Final payment of the Warren Act contractors' share of the construction costs amounting to \$895,866 was made November 14, 1949. A small sum remains to be paid on their share of the cost of rehabilitation and betterment work on Pathfinder Dam and Reservoir. Also, these districts continue to advance their share of the annual cost of operating and maintaining the reserved works operated by the Bureau.

CONTRACTS

Beerline Irrigation Canal Co.—March 6, 1913, for purchase of 2,800 acre-feet for \$10,250, payable in 5 install-

ments. Contract IIr-479 of July 3, 1918, reduces to 1,639 acre-feet for \$5,040.

Brown's Creek irrigation district.—Contract IIr-1564 of July 14, 1913, and August 4, 1914, for purchase of 19,900 acre-feet for \$61,900, payable in 10 annual installments. Contracts of April 27, 1927, and November 30, 1914, allow extension of time of payment.

Central irrigation district.—March 6, 1913, and contract IIr-480 of August 4, 1914, for purchase of 4,050 acre-feet for \$12,275, payable in 10 annual installments.

Thimney Rock Irrigation Canal & Water Power Co.—March 6, 1913, and Contract IIr-481 of August 6, 1914, and August 30, 1916, for purchase of 10,300 acre-feet for \$32,900, payable in 10 annual installments. Contract of February 27, 1926, allows extension of final payment.

Pering irrigation district.—January 17, 1913, and Contract IIr-482 of August 4, 1914, for purchase of 35,500 acre-feet for \$100,000 payable in 10 annual installments.

Tri-State Land Co.—August 20, 1912, and December 6, 1912, for purchase of 180,000 acre-feet for \$500,000, payable in 20 annual installments. By contract of August 10, 1915, company's interest assigned to Farmers' irrigation district. Contract IIr-215 of

Funds advanced to the United States for operation and maintenance of reserved works—Fort Laramie division

July 15, 1927, allowed extension of 8 years in time of payment.

Bridgeport irrigation district.—Contract IIr-483 of June 14, 1915, for purchase of 30,478 acre-feet for \$77,620, payable in 10 annual installments. By act of Congress of August 1, 1942, district's contract canceled and payments forfeited. Contract reduced by \$54,334, leaving a contract amount of \$23,286.

Goshen Land Co.—Contract IIr-76 of July 1, 1915, for purchase of 29,244 acre-feet for \$94,260, payable in 10 annual installments. Contract of March 9, 1917, assigned rights of company to Lingle Water Users Association. By contract of May 10, 1922, association purchased 3,609 acre-feet additional for \$20,260, payable in 10 annual installments. Contract of September 29, 1926, extended time of payment of 1925 installment over 3 years. Contract of May 15, 1924, for purchase of additional storage right for \$380.

Pleasant Valley Lateral Association.—Contract IIr-484 of June 6, 1915, and December 18, 1915, for purchase of 13,522 acre-feet for \$35,860, payable in 10 annual installments. Contract of December 15, 1928, assigned rights to Hill irrigation district and allowed extension of time for payment of unpaid and unaccrued balances.

Lincoln Land Co.—Contract IIr-485 of April 17, 1917, for purchase of 1,941 acre-feet for \$9,705, payable in 10 annual installments.

¹ Decrease. Decreases are due to cancellations of water-right applications, funding of delinquent charges, and deferments under relief acts. 1912—Adjustment under 1911 public notice; 1915—Reclamation Extension Act. Aug. 13, 1914; 1926—adjustment under 1926 contract.

² Decrease in obligation due to opening of additional lands to homestead entry.

³ Increase in obligation due to funding of delinquent charges under 1926 contract.

⁴ Moratorium period. Acts of Apr. 1, 1932, Mar. 3, 1933, Mar. 27, 1934,

June 13, 1935, and Apr. 14, 1936. Total amount of construction charges deferred for years 1931-36, \$169,555.

⁵ Adjustments of accruals and collections due to acquisition of the power system by the United States.

⁶ Decrease. Additional adjustments in accordance with amendatory contracts covering credits given as a result of acquisition of the power system by the United States.

⁷ Decrease. Adjustments of accruals for nondistrict and nonconsenting lands due to power system acquisition.

OCHOCO PROJECT

PRINEVILLE, OREG.

The Ochoco irrigation district constructed the Ochoco Dam, completing it in 1920. Funds were provided by the 80th Congress in the Interior Department Appropriation Act of 1949 (act of June 29, 1948, 62 Stat. 112) to commence rehabilitation of the dam. Originally considered a division of the Deschutes project, it has been established as the Ochoco project.

The primary purpose of the project was to provide emergency rehabilitation of Ochoco Dam in order to make it safe from sudden failure. It is an earth-fill dam 125 feet high and the reservoir has a capacity of 47,500 acre-feet. The dam was built immediately after World War I as a part of a veterans' farm-settlement program undertaken by the State of Oregon. The original plan for the Ochoco project was to furnish irrigation water for 22,500 acres of land; however, the water supply proved to be inadequate and the area was reduced to 14,000 acres. In 1935 the irrigable area was further reduced to 8,500 acres. Reconstruction of Ochoco Dam began in 1949. The major construction work which was performed by contract was completed in March 1950. The remedial work on the right abutment leak was completed as of June 30, 1952.

The actual cost for construction is \$846,271. The entire amount, with the exception of \$346,271 allocated to flood control, will be repayable by

the district under the terms of the repayment contract. All physical construction has been completed.

The Ochoco irrigation district operates the project works.

Repayment contract.—The water users of the Ochoco irrigation district have executed a repayment contract with the United States for \$500,000 reimbursable costs, with annual installments of \$12,750, beginning after liquidation of the district's outstanding bonded indebtedness (\$243,500) but not later than 1968. The \$12,750 annual installment is to be varied in accordance with the normal and percentage plan of the Reclamation Project Act of 1939. If repayment begins in 1968, it will be completed in 2007.

CONTRACTS

1950, April 24: Contract Ilr-1569 with Ochoco irrigation district to repay \$500,000 of total cost.

The cost and repayment allocation:

Total project cost.....	\$846, 271
Allocation of costs:	
Reimbursable costs: Irrigation.....	500, 000
Nonreimbursable costs: Flood control ¹	346, 271
Total.....	846, 271

¹ Pursuant to allocation of costs under secs. 7 and 9 of the Reclamation Project Act of 1939 as authorized by the Interior Department Appropriation Act of 1949.

OGDEN RIVER PROJECT

OGDEN, UTAH

The construction of the Ogden River project in Weber and Box Elder Counties, Utah, was initiated on August 24, 1933, under the provisions of the National Industrial Recovery Act of 1933.

Project construction was approved by the President on November 16, 1935, under the terms of subsection B, section 4, act of December 5, 1924 (43 Stat. 701).

The project was developed to furnish a full water supply to approximately 4,500 acres and a supplemental supply to about 18,500 acres of land. Project features include the Pine View Dam and Reservoir, reconstructed Ogden Canyon conduit, Ogden-Brigham canal, and the South Ogden highline canal, and also the South Ogden distribution high-pressure system constructed for the South Ogden conservation district.

The total actual cost of constructing the project features was \$5,000,984. The entire amount, together with operation and maintenance funded, less contributions and revenues, is repayable under the terms of repayment contracts with the Ogden River Water Users' Association and the South Ogden conservation district.

The cost and repayment allocations:

Total project cost.....	\$5,000,984
Allocation of reimbursable costs: Irrigation..	5,000,984
<hr/>	
Repayment of reimbursable costs:	
For irrigation plant investment.....	5,000,984
Operation and maintenance funded.....	11,389
Less:	
Nonreimbursable CCC costs.....	-278,000
Contributions.....	-12,667
Revenues.....	-220
<hr/>	
Total repayment obligation.....	4,721,486
<hr/>	

By municipal water users.....	\$35,000
By power water users.....	261,115
By irrigation water users.....	4,438,820
Adjustment pending.....	-13,449
<hr/>	
Total.....	4,721,486

Operation and maintenance of the project, except the South Ogden distribution system, was transferred to the Ogden River Water Users' Association on August 1, 1937. The South Ogden distribution system is operated and maintained by the South Ogden conservation district.

Repayment contracts.—The original Ogden River Water Users' Association repayment contract was signed May 31, 1934, and the original South Ogden conservation district contract was signed May 13, 1940. The Ogden River Water Users' Association amendatory contract, signed on May 23, 1950, provides for the full repayment of the association's obligation in 62 years including the 1950 payment:

CONTRACTS AND PUBLIC NOTICES

- 1934, May 31; 1935, November 30; 1936, November 27: Contract Ilr-761 with Ogden River Water Users' Association for construction of Pine View Reservoir. Estimated cost, \$4,200,000, payable in 40 equal annual installments.
- 1934, August 20: Contract Ilr-976 with city of Ogden for municipal water supply. Cost, \$35,000, payable in 10 equal annual installments (paid in full).
- 1934, October 18: Contract with Utah Power & Light Co. for construction of wood-stave pipeline. Cost, \$261,115, payable in 20 equal annual installments (paid in full).
- 1940, May 13: Contract Ilr-1224 with South Ogden conservation district for construction of distribution system. Estimated cost, \$345,000, payable in 39 equal annual installments.

1948, April 7: Letter notice to South Ogden conservation district that total construction cost under contract dated May 13, 1940, was determined to be \$321,666.41.

1948, August 23: Contract with South Ogden conservation district for additional construction of South Ogden distribution system. Cost, \$272,062, payable in 40 equal annual installments.

1950, May 23: Amendatory contract with Ogden River Water Users' Association for its unpaid construction

obligation of \$3,403,500, payable in 62 annual installments with optional price index variable repayment plan.

The summary of status of repayment contracts:

Total value of contracted repayment.....	¹ \$4,734,935
Total matured charges.....	1,344,814
Total matured charges repaid.....	1,344,814
Total matured charges unpaid.....	0

¹ To be adjusted to actual obligation of \$4,733,786.

¹ Decrease in obligation represents adjustment to actual work.

² Decrease. Decrease covers amounts deferred under 1939 act. Ogden

River Water Users' Association construction charges deferred under act of Aug. 4, 1939, calendar years 1942, \$75,266; 1943, \$75,265.

OKANOGAN PROJECT

OKANOGAN, WASH.

The construction of Okanogan project in Okanogan County, Wash., was authorized by the Secretary of the Interior on December 2, 1905, under authority of the Reclamation Project Act of 1902. (32 Stat. 388.)

The project was developed to provide irrigation water for land, devoted principally to apple production, on the west side of Okanogan River. Project facilities include Conconully Dam and Reservoir and Salmon Lake Dam and Reservoir, a diversion dam in Salmon Creek, and a main canal.

The total original cost of construction for the Okanogan project was \$1,484,324. In addition, rehabilitation work currently programed is estimated to cost \$36,305, with \$28,624 in costs to date at June 30, 1957. Repayment contract coverage for rehabilitation work has a ceiling of \$126,000. By acts of May 25, 1926, May 25, 1928, and January 30, 1954, construction cost chargeoffs totaled \$978,504.

Operation and maintenance of the irrigation system was assumed by the Okanogan irrigation district on December 31, 1928.

Repayment contracts.—The original contract for construction of the Okanogan project was with the Okanogan Water Users' Association on April 16, 1906. On February 10, 1919, the United States first contracted with the Okanogan Irrigation District. On September 20, 1949, an amendatory contract was signed that provided for payment by the district of \$326,247.64 in annual installments of \$10,003.09 each, varied by a gross-income ratio and by a parity ratio.

On August 15, 1951, the Okanogan irrigation district signed a contract to repay the costs of rehabilitating Conconully Dam. The maximum

repayment obligation of this contract is \$126,000, to be consolidated with the original project construction obligation to be repaid under the same rate and terms. Repayment of total obligations will be completed by about 1991.

PUBLIC NOTICES AND CONTRACTS

- 1908, November 12: Public notice. Construction charge of \$65 per acre, payable in 10 equal annual installments:
- 1912, April 29: Public notice. Construction charge raised to \$70 per acre, payable in annual installments of \$8 each, with first installment due on May 1, 1912.
- 1917, April 18: Public notice. Construction charge of \$95 per acre, payable in 20 graduated annual installments.
- 1918, August 29: Public notice. Supplemental construction for pumping plant. Rate, \$12.50 per acre, payable in two annual installments after regular construction.
- 1919, February 10: Contract with Okanogan irrigation district. District assumes obligations under individual water-right applications. Delinquent charges and penalties funded with construction.
- 1928, November 24: Contract with Okanogan irrigation district. Remaining obligation of district reduced to \$310,000, payable in 31 equal annual installments beginning with year 1928, plus \$4,259 for equipment taken over to be paid for in 10 years.
- 1948, September 20: Contract Ilr-1534 with Okanogan irrigation district. Obligation of district to be repaid in installments of \$10,033.09 each, adjusted by a gross-income ratio and by a parity ratio.
- 1951, August 15: Contract I74r-1649 with Okanogan irrigation district. Provides for rehabilitation and betterment of Conconully Dam at a cost not to exceed \$126,000. Costs of rehabilitation to be funded with the original project construction obligation and repaid under the same terms as that obligation.

ORLAND PROJECT

ORLAND, CALIF.

Orland project was conditionally approved by the Secretary of the Interior on December 18, 1906, shortly after the formation of the Orland Unit Water Users' Association. The conditions were met and the authorization made definite on October 5, 1907.

The original project considered irrigation of about 14,000 acres of land surrounding and adjacent to the town of Orland, Glenn County. Principal features included East Park Dam and Reservoir and a distribution system. Additional features were constructed immediately after completion of the original structures, Rainbow Dam on Big Stony Creek and the feeder canal diverting into East Park Reservoir. Supplementary construction of the distribution system added 6,000 acres for cultivation. Further enlargement of storage facilities was made in 1928 with the construction of Stony Gorge Dam.

The total construction cost of the project, excluding rehabilitation and betterment charges, is \$2,583,870.

Since October 1, 1954, the project has been operated and maintained by the Orland Unit Water Users' Association.

Repayment contracts.—The original agreement between the United States and the Orland Unit Water Users' Association, dated April 3, 1909, provided for the construction of East Park and Rainbow diversion dams, and initial distribution facilities of the project. Supplemental agreements made possible the expansion of distribution facilities to accommodate about 20,000 acres of land as well as the construction of Stony Gorge Dam. Amendatory contracts were signed with each individual water user subsequent to the act of June 24, 1936, providing for full repayment of all construction and deferred costs. Under a provision of the contract of August 26, 1954, providing

for the operation and maintenance of the project by the Orland Unit Water Users' Association, the association assumed joint responsibility with the individual water users for the repayment of construction charges. Repayment will be substantially completed by 1976, though small amounts will be due annually until 2005. Application of surpluses to the construction obligation will reduce this period by about 7 or 8 years. Final repayment will be made about 1998.

PUBLIC NOTICES AND CONTRACTS

- 1909, April 3: Contract with Orland Unit Water Users' Association guarantees repayment of construction charges.
- 1916, May 24: Public notice: Construction charge, \$44 per acre, payable in 20 annual graduated installments; certain exceptions requiring repayment in 10 equal annual installments or in 15 annual graduated installments.
- 1918, April 2: Public notice: Supplemental construction; rate, \$11 per acre, payable in 18 annual graduated installments.
- 1926, June 15: Public notice: Supplemental construction; rate, \$68 per acre, payable in additional annual installments at \$4 per irrigable acre per annum, beginning December 1, 1936, and continuing until complete repayment.
- 1936: Amendatory contracts with each individual water-right applicant providing supplemental construction charges of \$68 per acre plus any construction and/or operation and maintenance charges due June 24, 1936, with accrued interest or penalties, shall be paid in 35 annual installments commencing March 1, 1937, and due December 1, thereafter.
- 1954, August 26: Contract 14-06-200-3502 with Orland Unit Water Users' Association for the care, operation, and maintenance of the Orland project; effective October 1, 1954.
- 1956, May 14: Contract 14-06-200-5559 with Orland Unit Water Users' Association for rehabilitation and betterment of the distribution system of the Orland project, and providing for repayment of the costs by the association.

The present repayment obligation of the water users' association has been determined as follows:

Construction cost.....	\$2, 583, 870
Rehabilitation and betterment contract.....	250, 000
Operation and maintenance funded.....	166, 363
Penalties funded.....	12, 965
Unsold water rights.....	10, 587
<hr/>	
Less:	
Contributions.....	1, 800
Water rental credits.....	22, 360
<hr/>	
Total.....	(24, 160)
Repayment obligation.....	2, 999, 625

Municipal and miscellaneous water contracts.— At the request of the unincorporated town of Elk Creek, the Glenn County High School, Elk Creek Elementary School, and Elk Creek Cemetery district for an adequate water supply for irrigation and miscellaneous purposes, a contract was executed to furnish 45 acre-feet per annum out of Stony Gorge Dam. Contract was executed March 25, 1936, upon receipt of \$1,147.50, the construction charge allocated against Stony Gorge Dam cost for delivery of 45 acre-feet per annum. Annual operation and maintenance charges pre-

¹ Increase in obligation due to supplemental construction under 1926 public notice.
² Decrease—decreases cover cancellation of water right applications and deferment of charges under relief acts.

³ Moratorium period 1932 through 1937: Acts of Apr. 1, 1932; Mar. 3, 1933; Mar. 27, 1934; June 13, 1935; and Apr. 14, 1936.

vailing on the project are also levied and collected. The project lands have prior water rights.

Rehabilitation and betterment.—By a resolution dated February 24, 1950, the board of directors of the Orland Unit Water Users' Association requested a program of rehabilitation and betterment on project facilities not exceeding \$250,000. This was accomplished during fiscal years 1949, 1950, 1951, and 1952, and funds expended will be

reimbursed by increasing the annual operation and maintenance charge, payable by each water user, in the amount of \$0.67 per acre per annum beginning with the year 1950 and continuing until fully repaid.

On April 19, 1954, the North diversion dam failed. Temporary measures provided service during that irrigation season, and the dam was replaced the following autumn at a total cost of

¹ Payout of majority of water-right applicants.

\$42,491. Repayment of this cost is provided for in the operation and maintenance contract of August 26, 1954, by extending the \$0.67 per acre charge for the rehabilitation and betterment mentioned above.

The contract of May 14, 1956, provides for relining a portion of the canals and laterals of the distribution system over a 3-year period at an estimated cost of \$250,000. The work is to be performed by the association with funds advanced by the United States, and will be done during the winter season, beginning in fiscal year 1957, when no irrigation water is being delivered. Repayment will be made by the association, and is expected to be available through savings in annual operation and maintenance costs occasioned by the rehabilitation. Larger annual payments will be made after construction costs are substantially repaid. Two succeeding programs of the same nature are expected to follow to accomplish the full rehabilitation and betterment needed.

Proposed future rehabilitation and betterment work is estimated to cost an additional \$500,000. This work includes rehabilitation of stream banks of North diversion dam and relining of the South Canal and laterals.

As of June 30, 1957, the status of repayment is as follows:

¹ Water users assumed operation and maintenance on Oct. 1, 1954.

OWYHEE PROJECT

NYSSA, OREG.

The Owyhee project was found feasible by the Secretary of the Interior on October 9, 1926, and approved by the President on October 12, 1926, under the provisions of section 4 of the act of June 25, 1910 (36 Stat. 836), and subsection (b) of section 4 of the act of December 5, 1924 (43 Stat. 702).

The purpose of the project is to irrigate approximately 105,000 acres of land in Idaho and Oregon, and in addition to furnish a supplemental water supply to about 13,800 acres in Oregon.

The major features of the project include the Owyhee Dam and Reservoir for storage, and extensive main canal, lateral, and drainage systems. The main canal system includes several pumping plants, and also several tunnels and siphons noteworthy for their size and length.

The project is composed of the Succor Creek, Mitchell Butte, and Dead Ox Flat divisions.

The total repayment ceiling of the project is \$19,826,659. The entire amount is repayable under the terms of repayment contracts with 9 irrigation districts in the Owyhee project, and a separate Warren Act contract with the Owyhee Ditch Co. In 1952 the project works were transferred to the water users for operation and maintenance, with the exception of the Owyhee Reservoir and related works, which were operated and maintained by the United States until transferred to the water users November 1, 1954. The water users' irrigation districts are organized into two separate boards of control. The South Board of Control is formed by the Gem and Ridgeview irrigation districts. The North Board of Control represents the Slide, Owyhee, Payette-Oregon Slope, Ontario-Nyssa, Bench, Crystal, and Advancement irrigation districts.

Repayment contracts.—The original contracts with the Advancement, Bench, Crystal, Gem, King-

man Colony, Ontario-Nyssa, Owyhee, Payette-Oregon Slope, and the Slide irrigation districts provided for repayment of the construction costs in 39 annual installments. Contracts have also been entered into with the Owyhee Ditch Co. for purchase of 21,000 acre-feet of storage capacity in the Owyhee Reservoir at a price of \$300,000, payable in 30 annual installments and for payment of 18 percent of cost of constructing the Owyhee ditch pumping plant. The obligation to be repaid by the water users now totals \$19,826,659. Of this amount, \$326,659 is covered under separate contracts with the Owyhee Ditch Co. The amendatory repayment contract for \$19,500,000, dated August 29, 1951, did not become effective until October 1952. However, approval by the Congress was made on June 23, 1952, under Public Law 402, 82d Congress, 2d session. This contract provides for a fixed annual assessment of \$2.10 per acre, with application of the normal and percentage plan plus parity provisions optional.

CONTRACTS

- 1926, October 14: Contract Ilr-61 with Gem irrigation district to cover construction costs.
- 1926, October 14: Contract Ilr-60 with Slide irrigation district to cover construction costs.
- 1926, October 14: Contract Ilr-59 with Owyhee irrigation district for repayment of construction costs.
- 1926, October 14: Contract Ilr-58 with Payette-Oregon Slope irrigation district for repayment of construction costs.
- 1927, February 5: Contract Ilr-153 with Ontario-Nyssa irrigation district to cover construction costs.
- 1928, August 3: Contract Ilr-356 with Owyhee Ditch Co. for purchase of 21,000 acre-feet of storage in Owyhee Reservoir.
- 1929, January 14: Contract with Kingman Colony irrigation district to cover construction costs.
- 1931, October 5: Contract Ilr-675 with Bench irrigation district to cover construction costs.

1931, November 28: Contract Ilr-678 with Crystal irrigation district to cover construction costs.

1935, August 28: Contract Ilr-809 with Owyhee Ditch Co. to cover 18 percent of cost of Owyhee ditch pumping plant, repayable in 40 annual installments.

1936, September 1: Contract Ilr-882 with Advancement irrigation district for repayment of construction costs.

1951, August 29: Amendatory repayment contract Ilr-876 supersedes all above contracts with exception of those with Owyhee Ditch Co. Kingman Colony irrigation district combined with Owyhee irrigation district. Owyhee irrigation district lands under South Main Canal comprise the newly formed Ridgeview irrigation district, which is party to the amendatory contract. Contract calls for a base annual charge of \$210,000. (One hundred thousand acres at \$2.10 subject to adjustment for power cost variations) commencing in 1953, to be completed in 88 years. Application of normal and percentage plan optional.

The summary of status of repayment contracts:

Total value of contracted repayment.....	\$19, 826, 659
Total matured charges.....	2, 517, 255
Total matured charges repaid.....	2, 513, 658
Total matured charges unpaid.....	3, 597

The repayment obligation ceiling is established as follows:

Completed plant and prepayments.....	\$19, 279, 253
Incomplete rehabilitation work.....	81, 982
Other incomplete work.....	35, 301
<hr/>	
Total estimated cost.....	19, 396, 536
Funded charges ¹	480, 882
Less contributions.....	-23, 107
Less water users' equity.....	-62, 393
Remaining contract ceiling.....	34, 741

Repayment contract.....	19, 826, 659
-------------------------	--------------

¹ Includes anticipated charges of \$2,240.

¹ Decrease. Operation and maintenance accruals and collections canceled and applied to water rentals.

² Decrease.

PALISADES PROJECT

IDAHO FALLS, IDAHO

Palisades Dam project was initially authorized December 9, 1941 (H. Doc. 457, 77th Cong., 1st sess.), under provisions of section 9 of the Reclamation Project Act of 1939 (53 Stat. 1187). Construction was delayed because of World War II and the necessity of reaching water-savings agreements between the Bureau of Reclamation and the farmers in the Upper Snake River Valley. In 1949 the original plan of development was changed by increasing the power capacity, enlarging the outlet works and adding recreation features. Congress reauthorized the Palisades project by act of September 30, 1950 (64 Stat. 1083).

The Palisades Reservoir will provide supplemental irrigation water for 650,000 acres of land located in the Upper Snake River Valley. The 114,000-kilowatt powerplant will serve irrigation pumping, municipal, cooperative and private loads. Direct flood protection will be provided for land located on the Snake River Plain above American Falls Reservoir. Completed project works will include the dam and reservoir, powerplant and transmission lines.

The total estimated cost of the Palisades project is \$62,500,000.

The construction costs are allocated as follows:

Reimbursable:	
Irrigation.....	\$27, 067, 090
Power.....	17, 256, 910
Nonreimbursable:	
Flood control.....	17, 528, 000
Fish and wildlife and recreation.....	648, 000
Total.....	62, 500, 000

The project costs allocated to irrigation and power are reimbursable and are to be repaid under terms consistent with Reclamation law. Of this amount, water users are to repay \$9,300,000. The irrigation allocation includes \$11,992,090 of

irrigation power facilities which are reimbursable by power.

After payout of Palisades project costs, net power revenues are applied to irrigation costs on the Michaud Flats project and the Michaud Division of the Fort Hall Indian Reservation in accordance with the provisions of Public Law 741, 83d Cong., 2d session, approved August 31, 1954.

Power and energy available during the irrigation season is reserved for Federal project pumping loads and the Minidoka project power system. Commercial firm power is sold to the city of Idaho Falls, Lost River Electric Cooperative, Inc., Fall River Rural Electric Cooperative, Inc., and Lower Valley Power & Light, Inc. Secondary energy during the irrigation season is sold to the Idaho Power Co. Dump energy is sold to the Utah Power & Light Co. and the Idaho Power Co.

Repayment contracts.—On June 30, 1957, the Bureau of Reclamation had negotiated repayment contracts with 43 irrigation districts and canal companies and the Bureau of Indian Affairs for repayment of the costs allocated for repayment by irrigation. Additional contracts with other users will be negotiated to cover the remaining portion of the \$9,300,000 allocated for repayment by water users.

CONTRACTS

- 1952, December 12: Contract 14-06-W-18 for \$49,500 with Parks & Lewisville Canal Irrigation Co. Payable in 40 years on a fixed installment basis.
- 1952, December 12: Contract 14-06-W-10 for \$28,350 with Reed Canal Co. Payable in 40 years on a fixed installment basis.
- 1952, December 12: Contract 14-06-W-26 for \$56,700 with Rigby Canal & Irrigating Co. Payable in 40 years on a fixed installment basis.
- 1952, December 12: Contract 14-06-W-25 for \$10,800 with Riverside Ditch Co. Payable in 40 years on a fixed installment basis.

- 1952, December 12: Contract 14-06-W-37 for \$141,300 with Rudy Irrigation Canal Co. Payable in 40 years on a fixed installment basis.
- 1952, December 12: Contract 14-06-W-31 for \$35,100 with Shattuck Irrigation Co. Payable in 40 years on a fixed installment basis.
- 1952, December 12: Contract 14-06-W-35 for \$317,700 with Snake River Valley irrigation district. Payable in 40 years on a fixed installment basis.
- 1952, December 12: Contract 14-06-W-12 for \$56,700 with Sunnydell irrigation district. Payable in 40 years on a fixed installment basis.
- 1952, December 12: Contract 14-06-W-27 for \$21,150 with Texas Slough Irrigating Canal Co. Payable in 40 years on a fixed installment basis.
- 1952, December 12: Contract 14-06-W-23 for \$28,800 with Trego Ditch Co. Payable in 40 years on a fixed installment basis.
- 1952, December 12: Contract 14-06-W-13 for \$21,150 with West Side Mutual Canal Co. Payable in 40 years on a fixed installment basis.
- 1952, December 12: Contract 14-06-W-28 for \$900,000 with North Side Canal Co. Payable in 40 years on a fixed installment basis.
- 1952, December 18: Contract 14-06-W-48 for \$352,800 with Burley irrigation district. Payable in 40 years on a fixed installment basis.
- 1952, December 18: Contract 14-06-W-44 for \$282,600 with Peoples Canal & Irrigation Co. Payable in 40 years on a fixed installment basis.
- 1952, December 18: Contract 14-06-W-45 for \$13,950 with Poplar irrigation district. Payable in 40 years on a fixed installment basis.
- 1952, December 18: Contract 14-06-W-47 for \$211,500 with Progressive irrigation district. Payable in 40 years on a fixed installment basis.
- 1952, December 18: Contract 14-06-W-46 for \$21,150 with Watson Slough Ditch Co., Ltd., and Watson Slough Irrigation Co. Payable in 40 years on a fixed installment basis.
- 1952, December 18: Contract 14-06-W-50 for \$5,400 with Wearyrick Ditch Co. Payable in 40 years on a fixed installment basis.
- 1952, December 18: Contract 14-06-W-49 for \$54,000 with Woodville Canal Co. Payable in 40 years on a fixed installment basis.
- 1955, January 7: Contract 14-06-W-92 for \$247,500 with Milner low lift irrigation district. Payable in 40 years on a fixed installment basis.
- 1952, October 22: Contract 14-06-W-24 for \$1,375,200 with Aberdeen-Springfield Canal Co. Payable in 40 years on a fixed installment basis.
- 1952, December 12: Contract 14-06-W-39 for \$36,450 with Blackfoot Irrigation Co. Payable in 40 years on a fixed installment basis.
- 1952, December 18: Contract 14-06-W-41 for \$282,600 with Burgess Canal & Irrigating Co. Payable in 40 years on a fixed installment basis.
- 1952, December 12: Contract 14-06-W-21 for \$2,250 with Butler Island Canal Co., Ltd. Payable in 40 years on a fixed installment basis.
- 1952, December 12: Contract 14-06-W-38 for \$396,000 with Butte & Market Lake Canal Co. Payable in 40 years on a fixed installment basis.
- 1952, December 12: Contract 14-06-W-20 for \$7,200 with Clark & Edwards Canal or Irrigating Co. Payable in 40 years on a fixed installment basis.
- 1952, December 12: Contract 14-06-W-12 for \$56,700 with Corbett Slough Ditch Co. Payable in 40 years on a fixed installment basis.
- 1952, December 12: Contract 14-06-W-4812 for \$21,150 with Danskin Ditch Co. Payable in 40 years on a fixed installment basis.
- 1952, December 12: Contract No. 14-06-W-3212 for \$10,800 with Dilts Irrigation Co. Payable in 40 years on a fixed installment basis.
- 1952, December 12: Contract 14-06-W-1512 for \$176,400 with Enterprise Canal Co., Ltd. Payable in 40 years on a fixed installment basis.
- 1952, December 12: Contract 14-06-W-1112 for \$84,600 with Farmers Friend Irrigation Co., Ltd. Payable in 40 years on a fixed installment basis.
- 1952, December 12: Contract 14-06-W-3012 for \$211,500 with Harrison Canal & Irrigation Co. Payable in 40 years on a fixed installment basis.
- 1952, December 12: Contract 14-06-W-3312 for \$529,200 with Idaho irrigation district. Payable in 40 years on a fixed installment basis.
- 1952, December 12: Contract 14-06-W-2912 for \$42,300 with Island Irrigation Co. Payable in 40 years on a fixed installment basis.
- 1952, December 12: Contract 14-06-W-1612 for \$7,200 with Labelle Irrigating Co. Payable in 40 years on a fixed installment basis.
- 1952, December 12: Contract 14-06-W-2212 for \$70,650 with Lenroot Canal Co. Payable in 40 years on a fixed installment basis.
- 1952, December 12: Contract 14-06-W-1912 for \$21,150 with Liberty Park Irrigation Co. Payable in 40 years on a fixed installment basis.
- 1952, December 12: Contract 14-06-W-3412 for \$14,400 with Lowder Slough Canal Co., Ltd. Payable in 40 years on a fixed installment basis.
- 1952, December 12: Contract 14-06-W-3612 for \$50,400 with Martin Canal Co. Payable in 40 years on a fixed installment basis.
- 1952, December 12: Contract 14-06-W-1712 for \$105,750 with New Lava Side Ditch Co. Payable in 40 years on a fixed installment basis.
- 1952, December 12: Contract No. 1412 for \$282,600 with New Sweden irrigation district. Payable in 40 years on a fixed installment basis.
- 1952, December 12: Contract 14-06-W-4312 for \$10,800 with North Rigby Irrigation & Canal Co. Payable in 40 years on a fixed installment basis.
- 1957, April 25: Memorandum of agreement in amount of \$650,225 with Bureau of Indian Affairs. Repayment to be made on a nonappropriation cost transfer basis.

¹ Irrigation assistance includes \$17,069,090 for Palisades project and \$4,828,000 for Michaud Flats project and Michaud division of the Fort Hall Indian Reservation (Public Law 741, 83d Cong., 2d sess.).

² Includes storage obligation for all users of Palisades storage including Minidoka North Side pumping division, Michaud Flats project, and Michaud division of Fort Hall Indian Reservation.

PALO VERDE PROJECT

BLYTHE, CALIF.

The construction of the Palo Verde project, located in Yuma County, Ariz., and Riverside County, Calif., was authorized by the act of August 31, 1954 (68 Stat. 1045).

The purpose of the project is to reestablish for the Palo Verde irrigation district, a public agency of the State of California, a means of diverting its irrigation water supply from the Colorado River into its system, to provide protection for the lands of the Colorado River Indian Reservation against Colorado River floods, and to provide a means of draining the reservation lands. The act also authorized a loan of not to exceed \$500,000 to the district for the modification of its existing works to accommodate them to the new diversion structures. The present rock weir across the river will be removed to the extent its effect on the river and the works being constructed is nullified.

The district has priorities to Colorado River water for irrigation of 104,500 acres of valley lands and 16,000 acres of mesa lands in Riverside County, Calif. Project features include an earth and rockfill dam across the river near the district's former intake together with gated reinforced concrete spillway, intake works, a system of levees and an intercepting drain.

The total estimated cost of the project is \$5,356,593. All of the project costs are non-

reimbursable excepting \$1,175,000 of the construction costs and that portion of the \$500,000 loaned to the district for modification of its works. A contract has been executed with the district for repayment of the reimbursable costs over a period of 50 years. Upon completion of construction, the District will operate and maintain the dam, spillway, intake, and appurtenant works. Upon repayment by the district of the reimbursable costs in full, title to these works and the lands upon which they are constructed will pass to the District.

An agreement between the Commissioners of Indian Affairs and Reclamation approved by the Secretary provides that after the levees and drain are completed, their operation and maintenance will be the responsibility of the Bureau of Indian Affairs.

The summary of status of repayment contract:

Total value of contracted repayment.....	\$1, 675, 000
Total matured charges.....	10, 000
Total matured charges paid.....	10, 000
Total matured charges unpaid.....	0

CONTRACT

1955, October 7: Contract 14-06-W-94 with Palo Verde irrigation district for \$1,675,000, repayable in 50 years beginning in 1956.

PAONIA PROJECT

PAONIA, COLO.

Construction of the Paonia project was approved by the President on March 18, 1939, under the terms of subsection B, section 4, act of December 5, 1924 (43 Stat. 701). It was reauthorized by act of June 25, 1947 (61 Stat. 181). The act of April 11, 1956 (70 Stat. 105), which authorized the Colorado River storage project and participating projects, also authorized extending Paonia project.

The project is located in Gunnison and Delta Counties in west-central Colorado and is designed to furnish supplemental water to 14,830 acres of land and full water supply to 2,210 acres. Lands to be served are divided into three areas: Fire Mountain, Leroux Creek, and Minnesota. The irrigation features are to consist of Paonia Dam and Reservoir, Fire Mountain Canal, Overland Canal, and Minnesota siphon and pumping plant at an estimated cost of \$6,800,007.

The cost of facilities now completed at a cost of \$1,410,000 is repayable under the terms of the present contract with the North Fork water conservancy district.

The completed project features are being operated by the Fire Mountain Canal & Reservoir Co.

Repayment contracts.—The original North Fork water conservancy district repayment contract (Ilr-1536) was signed on June 11, 1948. The contract provides for repayment of \$2,320,000 in 68 annual installments. Repayment plan also includes an optional normal and percentage variable repayment plan. Project costs beyond the irrigation water users ability to pay will be

paid from revenues in the Upper Colorado River Basin fund in accordance with the act of April 11, 1956 (70 Stat. 105).

CONTRACTS

- 1948, June 11: Contract Ilr-1536 with North Fork water conservancy district. Repay \$2,320,000 in 68 annual installments to begin after development period of 3 years for Fire Mountain and 10 years for Leroux Creek lands. Includes an optional variable repayment plan. "Normal and percentages plan" based on gross value of crops produced.
- 1948, August 9: Contract Ilr-1537 with North Fork water conservancy district and the Fire Mountain Canal & Reservoir Co. The company grants the United States the right to reconstruct, relocate, enlarge, and extend Fire Mountain Canal, with works to be operated and maintained by the company.

The repayment status as of June 30, 1957:

Total value of contracted repayment.....	\$2, 320, 000
Total matured charges.....	0
Total charges repaid.....	0
Total matured charges unpaid.....	0

The allocation and repayment of costs:

Total estimated cost.....	\$6, 800, 007
Allocation: Reimbursable costs: irrigation...	6, 652, 707
Nonreimbursable costs:	
Flood control.....	74, 100
Fish and wildlife.....	73, 200
Total.....	6, 800, 007

Repayment of reimbursable costs:

From irrigation water users.....	2, 320, 000
From Upper Colorado River Basin fund..	4, 332, 707
Total.....	6, 652, 707

PARKER-DAVIS PROJECT

ARIZONA-CALIFORNIA-NEVADA

The Parker Dam power and Davis Dam projects were authorized and constructed separately. Their consolidation into the Parker-Davis project was authorized by act of May 28, 1954 (68 Stat. 143). The Parker Dam power project was authorized under the Rivers and Harbors Act of August 30, 1935 (Public Law 409, 74th Cong., 1st sess., 49 Stat. 1028). The Davis Dam project was authorized under the Reclamation Act of 1939 (53 Stat. 1187) when a finding of feasibility was made by the Secretary of the Interior on April 26, 1941.

The primary purpose of Parker Dam was to provide a forebay from which the Metropolitan water district could pump water into its Colorado River aqueduct. The dam was constructed with funds advanced by the Metropolitan water district. Parker Dam powerplant was later added to provide low-cost electrical energy to Arizona and southern California. Power generation started on December 13, 1942. Davis Dam provides regulation of the Colorado River below Hoover Dam and water for domestic use, including irrigation within the United States and delivery of water at the United States-Mexico international boundary as required in article 12 (b) of the Mexican Water Treaty of November 8, 1945. The Davis Dam project also provides for production and transmission of electric energy.

The major project works include Davis Dam and powerplant, Parker Dam and powerplant, and a high-voltage transmission system with substations which provide for delivery of energy to the customers and sectionalizing of the long transmission lines. Five generating units rated 45,000 kilovolt-amperes each are installed at Davis powerplant and four units of 30,000 kilovolt-amperes each are installed at Parker. The

transmission system includes approximately 1,600 miles of high-voltage transmission lines and 36 substations.

The total estimated cost of the Parker-Davis project is \$142,254,735, of which \$141,013,766, including \$135,243 in Yuma project facilities being repaid by Parker-Davis, has been expended prior to June 30, 1957. The portion of the project cost allocated to power is \$105,998,164. This amount will be repaid from power revenues with interest at 3 percent. In addition, \$22,341,889 allocated to irrigation and the cost of servicing the Mexican Treaty will be repaid from power revenues without interest. The total net revenue as of June 30, 1957, is \$31,250,145. These revenues have repaid to the Treasury \$12,859,884 of the cost allocated to power and \$18,390,261 in interest payments.

All project works are operated and maintained by the Government forces.

The allocation and repayment of costs:

<i>Total estimated construction cost</i>	
Parker Dam division:	
Dam and reservoir.....	\$8, 485, 092
Powerplant.....	10, 388, 052

PINE RIVER PROJECT

IGNACIO, COLO.

The Pine River project, located in La Plata and Archuleta Counties in southwestern Colorado, was approved for construction by the President June 17, 1937, under provisions of section 4 of the act of June 25, 1910 (36 Stat. 835) and subsection B of section 4 of the act of December 5, 1924 (43 Stat. 702).

The project works consist of Vallecito Dam and Reservoir, constructed to provide supplemental irrigation water for 34,000 acres and a new supply to 35,000 acres of project lands in both white and Indian ownership.

The total estimated cost of the project was \$3,469,877 on June 30, 1957. A contract was executed with the Pine River irrigation district and a memorandum of understanding with the Bureau of Indian Affairs for repayment of the reimbursable cost.

The allocation and repayment of costs:

Total estimated project cost.....	\$3, 469, 877
<hr/>	
Allocation:	
Reimbursable costs: Irrigation.....	1, 521, 351
Nonreimbursable: Flood control.....	1, 948, 526
<hr/>	
Total.....	3, 469, 877
<hr/>	
Repayment of reimbursable costs:	
From Pine River irrigation district.....	1, 250, 000
From Bureau of Indian Affairs.....	250, 000
From contributions and miscellaneous revenues.....	25, 566
<hr/>	
Total.....	¹ 1, 525, 566

¹ Includes \$4,215 of operation and maintenance charges funded.

The features constructed by the United States are being operated by the Bureau of Reclamation with funds advanced by the water users.

Repayment contracts.—The original repayment

contract Ilr-1204 was signed by the Pine River irrigation district April 15, 1940. The contract provided that the district and the Bureau of Indian Affairs would share in repaying reimbursable project costs. By amendatory contract dated November 30, 1953, the reimbursable cost was established at \$1,500,000, with five-sixths, or \$1,250,000, to be paid by the district and one-sixth, or \$250,000, to be paid by the Bureau of Indian Affairs. Execution of this contract was authorized by Public Law 533, 83d Congress, on July 27, 1954 (68 Stat. 534).

CONTRACTS

- 1940, January 3: Memorandum of understanding between the Bureau of Reclamation and the Office of Indian Affairs relating to cooperative use and operation of the Vallecito Reservoir. Repayment of one-sixth of the reimbursable construction cost of irrigation features which may be made in two equal installments if appropriations by Congress permit.
- 1940, April 15: Contract Ilr-1204 with Pine River irrigation district for five-sixths of the reimbursable construction cost of irrigation features. Repayment to be made in 38 consecutive annual installments commencing in 1944, the first 10 installments at 1½ percent, the second 10 at 2½ percent, and the next 18 at 3½ percent of the amount payable by the district.
- 1953, November 30: Amendatory contract Ilr-1161 approved by the act of July 27, 1954 (68 Stat. 534), provides for the district's unpaid repayment obligation to be paid in 30 annual installments with the option of paying under a variable plan based on price indices as described in contract.

The summary of status of repayment contracts:

Total value of amendatory repayment con- tract and memorandum of understanding..	\$1, 500, 000
Total matured charges.....	329, 180
Total matured charges repaid.....	329, 180
Total matured charges unpaid.....	0

PRESTON BENCH PROJECT

PRESTON, IDAHO

The construction of the Preston Bench project in Franklin County, Idaho, was authorized by act of June 15, 1948 (62 Stat. 442).

The project was developed to preserve the water supply of the project area. The project features include the diversion dam, Mink Creek Canal, and Station Creek tunnel.

The total cost of constructing the project was \$449,554. The project cost is repayable under the terms of the repayment contract with the Preston, Riverdale & Mink Creek Canal Co.

Operation and maintenance of the project was transferred to the Preston, Riverdale & Mink Creek Canal Co. on July 1, 1951.

Repayment contract.—The Preston, Riverdale & Mink Creek Canal Co. repayment contract Ir-1520 signed August 31, 1948, provides for the payment of the construction cost in 64 equal

annual installments following a 10-year deferment period, during which the company is to pay off other obligations due the United States through the Department of Agriculture. The deferment period is scheduled to end December 31, 1961.

The summary of status of repayment contracts:

Total value of contracted repayment.....	\$453,000
Total matured charges.....	0
Total matured charges repaid.....	0
Total matured charges unpaid.....	0

The allocation and repayment of costs:

PROVO RIVER PROJECT

PROVO, UTAH

The construction of the Provo River project in Utah, Salt Lake, Summit, and Wasatch Counties, Utah, was initiated under the provisions of the National Industrial Recovery Act of 1933, and approved by the President on November 16, 1935, under the terms of subsection B of section 4 of the act of December 5, 1924 (43 Stat. 701). Construction of the Salt Lake aqueduct as a part of the project was approved by the President on October 24, 1938. Deer Creek powerplant was authorized by the Secretary's finding of feasibility on August 20, 1951, under the provisions of section 9 of the Reclamation Project Act of 1939 (53 Stat. 1187).

The original project was planned to furnish supplemental water for approximately 85,000 acres of land and for municipal, industrial, and other purposes. Project features include the Deer Creek Dam, Reservoir, and Powerplant (5,000-kilowatts), enlarged Weber-Provo diversion canal, Duchesne tunnel, Provo River channel revision, enlarged Provo Reservoir canal, Jordan Narrows siphon, Salt Lake aqueduct, and Terminal Reservoir. The original project consisted of the Deer Creek division, the Aqueduct division, and the Utah Lake division. No construction work has been done on the latter and it is anticipated that this division will be made a part of the Central Utah project (ultimate phase).

Statutory debt limitation provisions of Utah law were largely responsible for the special Federal legislation on reimbursement of the costs of the Provo River project.

AQUEDUCT DIVISION

The total estimated cost of constructing the Aqueduct division features is \$12,869,252, which has been allocated to municipal and industrial water. The entire amount is repayable under the provisions of contracts with the Metropolitan water district of Salt Lake City.

The aqueduct was transferred to the district for operation and maintenance on May 1, 1951. The Terminal Reservoir was transferred to the district for operation and maintenance on April 1, 1952.

CONTRACTS

- 1938, November 16: Contract Ilr-1074 with Metropolitan water district of Salt Lake City for repayment of construction cost obligation in 40 annual installments. (Repayment obligation—\$5,550,000.)
- 1946, December 13: Supplemental contract Ilr-1074 with Metropolitan water district of Salt Lake City for repayment of increased costs in 40 annual installments. (Increased repayment obligation to \$8,043,650.)
- 1949, February 7: Supplemental contract with Metropolitan water district of Salt Lake City for repayment of construction obligation in excess of \$8,043,650 in accordance with Public Law 462, 80th Congress, 2d session (ch. 159, 62 Stat. 92). These increased construction costs will be paid in 15 consecutive annual installments, the first of which was made in fiscal year 1952.

The summary of status of Aqueduct division repayment contracts:

Total value of contracted repayment.....	\$12, 849, 242
Total matured charges.....	2, 060, 000
Total matured charges repaid.....	2, 060, 000
Total matured charges unpaid.....	0

DEER CREEK DIVISION

The total estimated cost of constructing the Deer Creek division features is \$21,092,905, excluding \$105,172 for operation and maintenance costs during construction. The entire irrigation investment is repayable under the terms of the contracts with the Provo River Water Users Association. The Deer Creek powerplant, a 5,000-kilowatt 2-unit plant, is under construction. The estimated construction cost is \$1,025,000 and is reimbursable from power revenues. The investment in power facilities will be repaid from power revenues within a 50-year period.

All features of the Deer Creek division, except the Deer Creek Dam and powerplant reservoir outlet and other appurtenant works, have been turned over to the Provo River Water Users Association for operation and maintenance by notices dated: May 2, 1952, January 30, 1953, February 20, 1953, January 8, 1954, and March 1, 1956.

The cost has been allocated as follows:

Irrigation (basis 42,500 shares Provo Water Users Association stock)-----	\$8, 528, 860
Commercial power-----	1, 025, 000
Municipal water (basis 57,500 shares Provo River Water Users Association stock)-----	11, 539, 045
Total-----	21, 092, 905

Repayment contracts.—The original Provo River Water Users Association repayment contract was signed June 27, 1936. A supplemental contract dated December 20, 1946, increased the contract obligation from \$7,600,000 to \$11,400,000, to be repaid in 40 years. Supplemental contract dated February 2, 1949 (authorized by Public Law 462, 80th Cong., 2d sess.) provides for the payment of Deer Creek division costs in excess of \$11,400,000, to be repaid on a water rental basis before the repayment provisions of supplemental contract dated December 20, 1946, would become effective.

The Provo River Water Users Association is under contract to repay the full costs of the Deer Creek division, estimated at \$20,067,905. Deer Creek powerplant costs estimated at \$1,025,000 are to be repaid from power revenues. Net power revenues will then be available for application to Deer Creek division costs. Of the total obligations, \$11,400,000 is to be repaid in 40 years under the provisions of the 1937 and 1946 repayment contracts. However, before those payments begin, the association is required to make water rental payments for a sufficient number of years under the 1949 contract to return the construction costs in excess of \$11,400,000. This excess is currently estimated at \$8,203,914, with repayment thereof now contemplated in about 35 years. Then repayments begin on the repayment obligation of \$11,400,000. Total payout period is thus contemplated at 75 years.

CONTRACTS

1936, June 27, symbol Ilr-873: Contract with Provo River Water Users Association for repayment of construction obligation in 40 annual installments. (Repayment obligation—\$7,600,000.)

- 1937, July 3, symbol Ilr-874: Supplemental contract with Provo River Water Users Association amended certain contract articles.
- 1938, December 20, symbol Ilr-1082: Contract with Provo River Water Users Association, Utah Power & Light Co., and the Utah Light & Traction Co. regarding effect of adjustments in Provo and Weber Rivers' stream flows on power companies' power production.
- 1938, December 20, symbol Il4-1083: Contract with the Provo River Water Users Association and Weber River Water Users Association transferring management, operation and maintenance, and appropriate construction costs of the Weber-Provo diversion canal to the Deer Creek division, Provo River project.
- 1939, October 28, symbol Ilr-1182, and 1939, November 28, symbol 1180: Contracts with Provo River Water Users Association and Provo Reservoir Water Users Co. regarding the enlargement of the Provo Reservoir canal.
- 1946, December 20, symbol Ilr-874: Supplemental contract with Provo River Water Users Association for repayment of increased costs in 40 annual installments. (Increased repayment obligation to \$11,400,000.)
- 1949, February 2, symbol Ilr-874: Supplemental contract with Provo River Water Users Association relating to repayment of construction obligation in excess of \$11,400,000 in accordance with Public Law 462, 80th Congress, 2d session.
- 1949, April 12; 1950, April 24; 1951, March 9: Annual water rental contracts with Provo River Water Users Association.
- 1952, January 31: Letter notice, water rental charges for 1952 irrigation season.

The summary of status of the Deer Creek division repayment contracts:

Total value of contracted repayment-----	\$19, 287, 645

RAPID VALLEY PROJECT

RAPID CITY, S. DAK.

Construction of Rapid Valley project (Deerfield Dam) in Pennington County, S. Dak., was authorized by the President on November 8, 1939, under provisions of the Great Plains Act of May 10, 1939 (43 Stat. 685), and again by the President on October 25, 1940, under provisions of act of August 11, 1939 (53 Stat. 1418, amended). A revised plan was approved by the President on June 5, 1942. After limitation of construction in December 1942 by the War Production Board, continuation of the Deerfield unit was approved by the President on November 22, 1943.

The purpose of the dam and reservoir is to supply municipal water for Rapid City, S. Dak., and a supplemental water supply for approximately 8,900 acres of irrigable land in the Rapid Valley conservancy district located along Rapid Creek downstream from Rapid City in Pennington County. Rapid City has a senior priority to 7,000 acre-feet of active storage and the Rapid Valley conservancy district has a junior right to the remaining 8,100 acre-feet of active storage in the reservoir. Deerfield Dam is an earth and rockfill structure 133 feet high and 825 feet long, with total storage capacity of 15,700 acre-feet, of which 600 acre-feet is dead storage and 15,100 acre-feet is active conservation storage. Water is delivered and paid for at the outlet works of Deerfield Dam. Initial water delivery was in 1946. Diversion of water by the conservancy district is accomplished through the use of existing ditches owned and operated by individual ditch companies. Rapid City diverts its water into the municipal water supply system at a pumping plant located on Rapid Creek near the city limits.

The total cost of the dam and reservoir is \$920,224.

Deerfield Dam and Reservoir is operated by the United States Government with funds advanced by Rapid City.

Repayment contracts.—The municipality of Rapid City, S. Dak., has contracted with the United States for repayment of \$500,000 toward the construction cost of Deerfield Dam and Reservoir. The Contract with the municipality of Rapid City is a repayment type and provides for payment of \$12,500 annually for a 40-year period. The city has made 10 payments, or a total of \$125,000, toward retiring their obligation.

The conservancy district has contracted with the United States for repayment of \$600,000 in 40 equal installments for irrigation facilities not yet constructed. In the interim the district pays at the rate of \$1 per acre-foot of water delivered from Deerfield Dam for irrigation. These payments are cumulated and, if additional works are constructed, shall first be applied to payment of the cost of the irrigation works and second be applied to the cost of Deerfield Dam which is not covered by the repayment obligations of Rapid City. If additional works are not built, the entire payments received will be applied to the cost of the dam.

The conservancy district has paid \$5,401.50 to the United States for water received under the contract.

CONTRACTS

- 1943, July 27: Contract Ilr-1413 with city of Rapid City, S. Dak., for \$500,000 toward the construction cost of Deerfield Dam and Reservoir. Repayable in 40 equal annual installments of \$12,500 due on or before May 1 of each year.
- 1943, July 27: Contract Ilr-1413 with Rapid Valley water conservancy district for \$600,000 for repayment of irrigation facilities to be constructed.

RATHDRUM PRAIRIE PROJECT

COEUR D'ALENE, IDAHO

A number of investigations have been made for irrigation development of the Rathdrum Prairie area, a triangular body of land northwest of Coeur d'Alene, Idaho. Although no complete irrigation system has been constructed to serve the area, small parts have been irrigated through private development. Construction work by the Bureau has involved rehabilitation of facilities for the Hayden Lake and Post Falls irrigation districts as units of the greater Rathdrum Prairie area.

Construction of temporary water service facilities for the Post Falls unit was authorized by the President on January 29, 1944, under terms of the Water Conservation and Utilization Act of August 11, 1939 (53 Stat. 1418), as amended. Work on the Hayden Lake unit was authorized by the Secretary of the Interior on June 9, 1947. Additional emergency rehabilitation work was authorized by the 1957 Public Works Appropriation Act of July 2, 1956 (70 Stat. 474). Construction began on the Post Falls unit on March 26, 1945, and on the Hayden Lake unit on May 18, 1948.

Work on the Post Falls unit provided irrigation water for about 3,500 acres, which had been partially irrigated since 1910, by construction of a pumping plant on Spokane River and rehabilitation of the distribution system. Rehabilitation of the Hayden Lake unit, part of which had been irrigated since 1906, involved replacement of 8,600 feet of the main discharge line and overhauling of the pumping equipment which lifts water from Hayden Lake to irrigate about 1,050 acres.

Major facilities of the Post Falls unit consist of 2 pumps, each capable of delivering 30 cubic feet per second, 3,000 feet of wood-stave discharge pipe, 7 miles of main canal, 4 miles of open laterals,

and 14,500 feet of concrete and wood-stave pipe laterals.

POST FALLS UNIT

Total construction cost of this unit is \$363,951, of which \$190,000 is reimbursable and \$173,951 is nonreimbursable under provisions of the Water Conservation and Utilization Act. Operation and maintenance of the irrigation facilities was turned over to the Post Falls irrigation district at the beginning of the 1949 irrigation season. Costs are financed by assessments of water users. The United States pays the costs of pumping power secured from a private utility, using funds advanced by the district.

Repayment contracts.—The repayment contract with the district, dated January 11, 1945, provides for repayment of \$190,000 in 40 equal annual installments of \$4,750 each. A 3-year development period began January 1, 1946, and ended December 31, 1948. Development period accruals and collections for the period 1946–48 were \$6,913, \$10,864, and \$11,661, respectively.

Construction repayment installments began in 1950 and will continue through 1989.

PUBLIC NOTICES AND CONTRACTS

- 1945, January 11: Contract Ilr-1433 with Post Falls irrigation district. To repay \$190,000 for irrigation construction in 40 annual payments of \$4,750.
- 1948, June 25: Department notice announcing end of development period, effective date of district assuming operation and maintenance and date of first payment on construction obligation.

HAYDEN LAKE UNIT

Construction cost of this unit under the 1949 repayment contract totals \$118,409, all of which is reimbursable by the water users. Operation and maintenance of the irrigation system was retained by the district during construction, and the district continues to operate the system. Costs are financed by assessments of water users. Additional construction work now under way is estimated to cost \$547,500.

Repayment contracts: The repayment contract with the district, dated February 16, 1949, provided for repayment of a maximum construction obligation of \$125,000. Actual cost has been determined to be \$118,409. The 2-year development period began on January 1, 1951, and ended on December 31, 1952. An initial payment toward construction costs in the amount of \$17,850 was made at the time the contract with the district was executed. Regular annual installments began in 1954 and will continue through 1993.

Repayment contract 14-06-100-1182 dated April 20, 1957, for additional work to the irrigation system provides for a maximum construction obligation of 547,500 to be adjusted to the actual cost upon completion of work. Repayment to be made in 50 years commencing upon expiration of a 3-year development period. The development period will begin when work is substantially completed.

PUBLIC NOTICES AND CONTRACTS

- 1949, February 16: Contract Ir-1527 with Hayden Lake irrigation district. To repay in 40 equal annual installments an obligation of \$125,000 (adjusted to cost of \$100,559, excluding initial payment of \$17,850.)
- 1950, December 29: Department notice announcing cost of project, development period, and date of initial installment on construction obligation.
- 1951, November 5: Department notice of actual construction cost.
- 1957, April 20: Contract No. 14-06-100-1182 with Hayden Lake irrigation district. To repay in 50 annual installments a maximum obligation of \$547,500.

RIO GRANDE PROJECT

NEW MEXICO-TEXAS

The construction of the Leasburg diversion dam in New Mexico for the Rio Grande project was authorized by the Secretary of the Interior December 2, 1905, under the provisions of the Reclamation Act, and funds were allocated to initiate construction of the first diversion unit. The Reclamation Act was extended to Texas June 12, 1906. Congress authorized the construction of Elephant Butte Dam March 4, 1907, at which time \$1,000,000 of nonreimbursable funds were appropriated from the General Treasury as the State Department's share for allocation by treaty of 60,000 acre-feet of water annually to Mexico. Additional project works authorized under more recent congressional action include: Caballo Dam, a combined flood-control and power-regulating structure financed with a \$1,500,000 nonreimbursable allotment transferred from the State Department to the Bureau of Reclamation in accordance with an interdepartmental agreement dated October 9, 1935, and with additional reimbursable allotments made to the Bureau during the period 1936 to 1941; and the Elephant Butte power development for which funds were initially made available under the Interior Department Appropriation Act, fiscal year 1939.

The purposes of the project are to provide irrigation water for lands in the Rio Grande Valley extending approximately 100 miles upstream and 40 miles downstream from the city of El Paso, Tex., and to furnish hydroelectric power in central and south-central New Mexico. The multi-purpose features consist of the Elephant Butte Dam and Reservoir with a storage capacity of 2,185,400 acre-feet and Caballo Dam and Reservoir with a storage capacity of 340,850 acre-feet. The irrigation features of the project consist of 6 diversion dams, 147 miles of canals, 443 miles of laterals and 470 miles of operating roads which provide for the irrigation of 178,315 acres. The

power features of the project consist of the Elephant Butte powerplant with a capacity of 24,300 kilowatts, 495 miles of 115-kilovolt transmission lines, 4 miles of 13.8-kilovolt transmission lines, and 14 substations with a combined capacity of 103,750 kilovolt-amperes which serve 3 private utility companies, 6 public-owned utilities, and 2 military defense establishments. The project is required by international treaty to furnish 60,000 acre-feet annually to the Juarez Valley, Republic of Mexico, and has a Warren Act contract covering excess and waste waters with the Hudspeth County conservation and reclamation district No. 1, Hudspeth County, Tex., which has an irrigable area of approximately 19,000 acres.

The project is divided into the Irrigation division and the Elephant Butte power and storage division, which are discussed separately below.

IRRIGATION DIVISION

There are two contracting entities in the Irrigation division, namely: the Elephant Butte irrigation district covering the lands in the State of New Mexico, and the El Paso County water improvement district No. 1 covering the lands in the State of Texas.

The total cost of construction chargeable to the Elephant Butte irrigation district is \$5,606,717. This amount, with exception of the congressional chargeoff, revenues, contributions, and other miscellaneous cost deductions totaling \$158,678, is repayable under the terms of the repayment contract with the Elephant Butte irrigation district. The repayment contract also covers funded charges in the amount of \$249,973. Operation and maintenance of the irrigation system is performed by the Bureau of Reclamation, with funds advanced by the district.

Repayment contracts.—The original contract, dated June 27, 1906, was between the United

States and the Elephant Butte Water Users Association. By contract dated June 15, 1918, the Elephant Butte irrigation district assumed the obligations of the Elephant Butte Water Users Association, which included cost of the irrigation facilities in the State of New Mexico and a portion of the cost of Elephant Butte Dam. By contract dated November 9, 1937, in accordance with the terms of the Appropriation Act of 1938, the district was relieved from repayment of the cost of Elephant Butte Dam in return for relinquishment of its interest in power development. By contract dated October 1, 1939, in accordance with terms of the Reclamation Act of 1939, repayment charges were spread over 40 years from date first installment became due under the original contract.

Secretary's notices have been issued to the district annually since December 1920.

CONTRACTS

- 1906, June 27: Original contract for project construction. Joint contract between United States and Elephant Butte Water Users Association, El Paso Valley Water Users Association.
- 1917, July 6: Advancement of funds for drainage construction, contract with Elephant Butte Water Users Association pending formation of irrigation district.
- 1918, June 15: Contract IIr-349 for construction of drainage works and works for distribution and delivery of irrigation water, repayment of construction and operation and maintenance charges. United States of America, Elephant Butte Water Users Association, Elephant Butte irrigation district. (Dissolution of Elephant Butte Water Users Association.) Sets construction liability of \$6,530,000.
- 1922, July 1: Assignment to the district of certain water accounts.
- 1924, February 21: Additional construction work. District assumed additional construction obligation of \$940,000.
- 1928, July 16: Amendments to existing contracts for construction repayment. (Fixing charge at \$3.60 per acre.)
- 1929, December 20: Credits for drainage rights-of-way and increased total construction work. District assumed additional construction obligation of \$450,000 and made provision for \$230,000 credit to be applied for drainage rights-of-way to be obtained by district.
- 1937, November 9: Contract IIr-982 for adjustment of project construction charges and for other purposes (relinquishment of interest in power development and advancement of operation and maintenance funds) reduced construction charges payable in fixed semiannual installments, period of repayment extended to 40 years. Total adjustment reduction \$2,410,864 resulting from relinquishment of power rights. Increased obligation \$188,876 for funded operation and maintenance and interest and penalties. Provided for district to advance funds for operation and maintenance operations.
- 1938, February 16: Providing for a 3-percent cushion on the irrigable area of the Rio Grande reclamation project as allocated to the districts. Elephant Butte irrigation district, El Paso County water-improvement district No. 1.
- 1939, February 2: Construction of additional work with contributed funds and providing for crediting of certain revenues (storage charges).
- 1939, August 30: Amending and supplementing contract dated December 20, 1929, relating to credits on account of drainage rights-of-way (extending credits to statutory rights-of-way). Increased credit applicable to rights-of-way by \$30,000.
- 1939, October 1: Adjusting period for payment of construction charges, repayment period extended to 40 years exclusive of years of moratorium on construction charges, 1931 to 1935, inclusive.
- 1954, October 20: Supplemental contract providing for deferment of construction charges payable in calendar year 1955.
- 1955, September 13: Supplemental contract providing for deferment of construction charges payable in calendar year 1956.

The summary of status of repayment contracts for the Elephant Butte irrigation district:

Total value of contracted repayment.....	\$5, 698, 012
Total matured charges.....	4, 082, 119
Total matured charges repaid.....	4, 082, 119
Total matured charges unpaid.....	0

The total cost of construction chargeable to the El Paso County water improvement district No. 1 is \$4,907,140. This amount, with exception of the congressional chargeoff, revenues, contributions and other miscellaneous cost deductions totaling \$636,685, is repayable under the terms of the repayment contract with the El Paso County water improvement district No. 1. The repayment contract also covers funded charges in the amount of \$175,656.

Repayment contracts.—The original contract dated June 27, 1906, was between the United States and the El Paso Valley Water Users Association. By contract dated January 17, 1920, the El Paso County water improvement district No. 1 assumed the obligations of the El Paso Valley Water Users Association, which included cost of the irrigation facilities in the State of Texas and a portion of the cost of Elephant Butte Dam. By contract dated November 10, 1937, in accordance with terms of the Appropriation Act of 1938, the district was relieved from repayment of the cost of Elephant Butte Dam in return for relinquishment of their interest in power development. By contract dated October 1, 1939, in

¹ Moratorium period. Acts of Apr. 1, 1932; Mar. 3, 1933; Mar. 27, 1934; June 13, 1935; and Apr. 14, 1936. Construction charges deferred for calendar years 1930, \$43,748; 1931, \$313,382; 1932, \$298,954; 1933, \$289,620; 1934, \$288,900; 1935, \$306,000; 1936, \$154,800.

² Decrease. Decreases cover amounts deferred under moratorium acts.

³ Decrease in obligation due to provisions of 1937 contract.

⁴ Supplemental contracts prepared under Secretary's authority deferring calendar year 1955, 1956, and 1957 installments.

accordance with terms of the Reclamation Act of 1939, repayment charges were spread over 40 years from the date first installment became due under the original contract.

Secretary's notices have been issued to the district annually since December 1920.

CONTRACTS

- 1906, June 27: Original first contract for project construction. Joint contract between United States and Elephant Butte Water Users Association, El Paso Valley Water Users Association.
- 1917, December 29: Construction of drainage works and works for the distribution and delivery of water for irrigation purposes and payment of construction and operation and maintenance charges. United States of America, El Paso Valley Water Users Association, El Paso County water improvement district No. 1 (limited interim contract, superseded by contract dated January 17, 1920).
- 1920, January 17: Contract Ilr-348 for construction of drainage works and works for the distribution and delivery of water for irrigation purposes and payment of construction and operation and maintenance charges. United States of America, El Paso Valley Water Users Association, El Paso County water improvement district No. 1 (dissolution of El Paso Valley Water Users Association). Sets construction liability at \$4,941,000.
- 1922, July 1: Assignment to the district of certain water accounts.
- 1922, October 12: Additional construction work. District assumed additional construction obligation of \$1,165,000.
- 1926, August 2: Construction of additional irrigation works—Riverside canal construction. Funds for construction advanced by district. Construction cost not applicable to repayments as provided by Public Law 264, 69th Congress, act of May 25, 1926.
- 1928, July 16: Amendments to existing contracts for construction repayment (fixing charge at \$3.60 per acre).
- 1929, September 3: Construction of additional drainage works and crediting of certain revenues. Funds advanced by district.
- 1931, June 10: Providing for the irrigation of the United States detention farm, Bureau of Prisons. Inter-

departmental agreement, Department of Justice, Department of the Interior. Approved, El Paso County water improvement district No. 1. Provides for operation and maintenance and construction payments on 400 acres of land by Department of Justice.

- 1932, November 2: Construction of additional drainage works with contributed funds and providing for crediting of revenues (extends contract of September 3, 1929).
- 1937, November 10: Contract Ilr-981 for adjustment of project construction charges and for other purposes (relinquishment of interest in power development and advancement of operation and maintenance funds). Reduced construction charges payable in fixed semi-annual installments, period of repayment extended to 40 years. Total adjusted reduction, \$1,835,544, resulting from relinquishment of power rights. Increased obligation \$175,655 for funded operation and maintenance and interest and penalties. Provided for district to advance funds for operation and maintenance operations.
- 1938, February 16: Providing for a 3-percent cushion on the irrigable area of the Rio Grande reclamation project as allocated to the districts. Elephant Butte irrigation district, El Paso County water improvement district No. 1. Approved, Secretary of the Interior.
- 1939, February 2: Construction of additional works with contributed funds and providing for crediting of certain revenues (storage charges).
- 1939, October 1: Adjusting period for payment of construction charges. (Repayment period extended to 40 years exclusive of years of moratorium on construction charges, 1931 to 1935, inclusive.)
- 1954, October 21: Supplemental contract providing for deferment of construction charges payable in calendar year 1955.
- 1955, September 9: Supplemental contract providing for deferment of construction charges payable in calendar year 1956.

ELEPHANT BUTTE POWER AND STORAGE DIVISION

The total estimated project cost of the Elephant Butte power and storage division is \$16,863,768. Of this total estimated cost, \$14,105,508 is reimbursable. Under terms of contracts signed with both irrigation districts in 1937, the obligation to repay the reimbursable cost of Elephant Butte Dam was transferred from the districts to the Elephant Butte power and storage division.

RIO GRANDE RIVER RECTIFICATION PROJECT

The Rio Grande River rectification project was a project constructed under the direction of the International Boundary and Water Commission of the State Department to rectify the channel of the Rio Grande mainly to stabilize the boundary between the United States and Mexico. The purpose of the Bureau of Reclamation portion of

the project was to relocate and otherwise make changes in the Rio Grande project irrigation and drainage facilities required in connection with the Rio Grande rectification project of the International Boundary and Water Commission. The project was financed with PWA funds transferred to the Interior Department from the State Department's allotment of such funds for the Rio Grande rectification project.

The work involved alterations to river inlets and outlets in connection with the Rio Grande project irrigation and drainage facilities required by the river rectification work. The work was performed in the period from 1935 to 1938.

The total actual cost of the Bureau of Reclamation portion of the project is \$180,628.23.

The works constructed in connection with Bureau of Reclamation portion of this project are all operated by the United States with funds advanced by the water users.

RIVERTON PROJECT

RIVERTON, WYO.

The Riverton project was authorized for construction by the Secretary of the Interior on June 19, 1918, under terms of the Indian Appropriation Act for the fiscal year 1919, approved on May 25, 1918. By act of June 5, 1920 (41 Stat. 874), the project was placed under the jurisdiction of the Bureau of Reclamation. As planned, the project provides for utilizing direct flow from Wind River and stored flow from Bull Lake Creek for the irrigation of approximately 65,000 acres of land, and generation of electric power for project construction, and for sale. Project works consist of Bull Lake Dam, Wind River Diversion Dam, Pilot Butte powerplant, Pilot Butte Dam and Reservoir, Wyoming Canal, Pilot Canal, and Muddy Ridge Canal.

FIRST AND SECOND DIVISIONS MIDVALE IRRIGATION DISTRICT

The total reimbursable cost including rehabilitation and betterment of irrigation works and supplemental drainage, allocated to the Midvale irrigation district as of June 30, 1957, is estimated at \$10,630,707. Under terms of the amendatory repayment contract of June 26, 1952, and contract of September 6, 1956, with the irrigation district, the entire amount is repayable except \$608,034 chargeoff authorized by the act of June 23, 1952 (66 Stat. 151), and \$8,177 by the act of August 13, 1953 (67 Stat. 566), and estimated contributions of \$200,000. The district had paid \$381,827 as of December 31, 1951, under the original contract. Annual installments are based on the number of acres in each pay class land, except that the district may elect to pay its annual installments according to a variable formula based on changes in farm commodity prices and the agricultural parity ratio. Classes 1 and 2 pay construction charges at the rate of \$2.05 per irrigable acre, class 3 at the rate of \$1.25 per irrigable acre and class 4 at the rate of \$0.50 per irrigable acre.

Operation and maintenance were assumed by the Midvale irrigation district on January 1, 1951, under terms of an interim operation and maintenance contract. The amendatory repayment contract of June 26, 1952, provides for the district to also operate the joint works, i. e., those irrigation works common to the Midvale irrigation district, Pilot Butte powerplant, and the Third division.

CONTRACTS

- 1931, February 12: Contract Ilr-629 with Midvale irrigation district for repayment of construction cost in 40 graduated annual installments.
- 1943, December 13: Contract with Midvale irrigation district. Contract provides for beginning construction charge repayments on December 31, 1944. Project to be continued on a water-rental basis.
- 1952, June 26: Contract 14-06-600-67 with Midvale irrigation district. Provides for repayment of adjusted construction charge obligation of \$7,000,000 in annual installments, based on land classification, beginning in 1953. Annual installment to include acres covered by water-service contracts with Indians or their lessees. Base annual construction installments estimated at \$54,180.
- 1956, September 6: Contract 14-06-600-1992 with Midvale irrigation district. Provides for repayment of monies expended for rehabilitation and betterment work, such sum not to exceed \$2,500,000, in annual installments based on land classification beginning in 1967.

The summary of status of repayment contracts in First and Second divisions on June 30, 1957, is as follows:

Total value of contracted repayment.....	\$9, 881, 827
Total matured charges.....	665, 450
Total matured charges repaid.....	643, 334
Total matured charges unpaid.....	1 22, 116

¹ Payment deposited July 2, 1957.

THIRD DIVISION

The total estimated cost of the Third division as of June 30, 1957, is \$20,839,980. Of this amount, \$683,695 is nonreimbursable under act

of August 13, 1953 (67 Stat. 566), and \$284 under act of August 15, 1953 (67 Stat. 592), and \$9,420,959 has been recommended as a writeoff due to loss of irrigable acres. The entire Cottonwood Bench area of 12,778 acres has been determined non-irrigable and dropped from the program. In addition, 23,647 acres in the North Pavillion, North Portal, and Muddy Ridge areas have been reclassified as nonirrigable and it has been recommended that costs associated therewith together with costs associated with the Cottonwood Bench area be written off. An amount of \$400,465 has also been recommended as a non-reimbursable allocation to fish and wildlife in connection with the Third division. Deduction of these items, all of which are subject to congressional authorization, would result in reimbursable costs of \$10,334,861 for the Third division. Court hearings on a petition to organize an irrigation district for the North Pavillion and North Portal areas were held early in July 1957. On August 29, the court order establishing the Third division irrigation district was filed. No lands in the Muddy Ridge or Cottonwood areas of the division were included. Plans are underway to open

repayment contract negotiations with the new district in the near future.

POWER DIVISION

The construction cost of Riverton allocated to the Power division is \$791,487, including assigned joint costs. The project works included in this allocation are Pilot Butte powerplant, the small transmission system required to dispose of the power at load centers and to interconnect with the Missouri River Basin project transmission system, and general property associated with power facilities. In addition to the direct power allocation, 10 percent of the cost of certain water supply works of the irrigation plant are assigned to power for repayment. These works are the Bull Lake Reservoir, Wyoming Canal First division, the diversion dam, and the telephone system. The amount so assigned is \$308,185. Construction of all power features is complete and the powerplant has been in service since 1925. The powerplant is comprised of two 800-kilowatt units. There are 75.8 miles of low voltage transmission lines and 4,970 kilovolt-amperes of receiving substation capacity.

ROGUE RIVER BASIN PROJECT—Talent Division

WHITE CITY, OREG.

The Talent division of Rogue River Basin project is located in Jackson County in southwest Oregon. The extension and enlargement of existing facilities, together with construction of new facilities, was authorized by Congress by act of August 20, 1954 (68 Stat. 752).

The primary purposes of the project are to provide supplemental irrigation water to 10,030 acres and a full water supply to 5,310 irrigable acres, and to generate electric energy. Construction of the project works will also result in providing the area with flood protection, protect and enhance the fish and wildlife values, and provide recreational facilities.

The principal features to be constructed will consist of a canal system which will collect water from streams in the Klamath River and Rogue River basins; Howard Prairie Dam and Reservoir with a capacity of 62,000 acre-feet; a delivery canal from Howard Prairie Dam to Keene Creek; and a dam and reservoir on Keene Creek to regulate releases from Howard Prairie Reservoir and Hyatt Prairie Reservoir for irrigation. In addition, power features will be constructed as an integral part of the irrigation system and will consist of the Green Springs powerplant with installed capacity of 16,000 kilowatts; a conduit and penstock from the Cascade Divide tunnel; and a pressure tunnel through the Cascade Divide from Keene Creek Reservoir in the Klamath River Basin to the Rogue River Basin. Existing irrigation facilities to be enlarged or extended consist of enlarging Emigrant Dam and Reservoir to a capacity of 40,000 acre-feet and enlarging and extending the Talent irrigation district's distribution system.

The total cost of constructing the Talent division facilities is estimated to be \$21,188,000, excluding rehabilitation described below. Construction costs are allocated as follows:

Reimbursable:	
Irrigation.....	\$12,321,000
Power.....	8,261,000
Subtotal.....	<u>20,582,000</u>
Nonreimbursable:	
Flood control.....	354,000
Recreation.....	156,000
Fish and wildlife.....	96,000
Subtotal.....	<u>606,000</u>
Total.....	<u>21,188,000</u>

In addition to the cost allocated to irrigation, it is anticipated that in 1962 when the Talent irrigation district is scheduled to start repaying construction costs, the district will have an unpaid bonded indebtedness of \$143,000. This indebtedness plus interest of \$23,980 when added to construction costs will make a total irrigation obligation of \$12,487,980.

Interest during construction of power facilities is estimated to be \$619,600. This amount when added to construction costs makes a total power cost of \$8,880,600, to be repaid by power at 2.5842 percent interest rate as specified in the project authorization act.

The Talent irrigation district will operate the existing facilities and as construction of project features is completed they may be turned over to the district for operation by written notice from the Secretary.

Construction cost of project facilities totaled \$1,951,339 as of June 30, 1957.

On the basis of the definite plan report and contractual negotiations, the reimbursable costs will be returned to the Government as follows: The Talent irrigation district will repay a maximum of \$5,810,000 of the costs allocated to irrigation. The Medford and Rogue River irrigation districts will pay an estimated amount of

\$1,015,000. Deferred costs on works to be built at some future date is \$161,359. Power will repay the total cost (\$8,261,000) allocated to it and pay the balance of irrigation cost allocation (\$5,334,591).

Repayment contracts.—On August 27, 1956, repayment contract No. 14-06-100-1045 was executed with the Talent irrigation district to repay that portion of the costs allocated for repayment by irrigation. The contract has fixed the district's irrigation construction charge obligation to be \$5,810,000. This amount can be reduced by the Secretary, if he finds that such a reduction is justified, to an amount not less than \$5,000,000. The contract also provides that should Medford and Rogue River irrigation districts develop 2,680 acres of new lands, these districts will be charged a comparable share of the allocated costs. This would amount to approximately \$1,015,000. Irrigation costs in the amount of \$161,359 have been deferred pending the construction of irrigation laterals.

Repayment of irrigation construction costs by the district is scheduled as follows: The annual installment shall be \$81,000, of which not less than \$19,000 shall be applied annually on the district's bonded indebtedness, including interest, and the last payment to be made by December 31, 1969. The annual installment is then recomputed by dividing the unpaid construction charge remaining by the number of years remaining in the 60-year repayment period (60 years less number of years used in retiring the bonded indebtedness).

The annual installments may be adjusted, if the district board elects, by adopting the Normal and Percentage variable repayment plan. The amount of the adjusted annual installment would range from 15 percent to 175 percent. Provisions are also included whereby this repayment plan can be further adjusted by using an appropriate parity factor, with the precise formula to be worked out at time of adoption.

Rehabilitation program (Medford irrigation district).—The rehabilitation and betterment of existing irrigation facilities for the Medford irrigation district was also authorized by the act of August 20, 1954 (68 Stat. 752).

The principal features to be rehabilitated are: Joint works which include Four-Mile Dam, Fish Lake Dam and the main canal; Medford Canal; and the district's distribution system.

The cost to the district for repair, rehabilitation, and betterment of the project works is estimated to be \$1,475,466.

The district will operate and maintain the project works.

Repayment contracts.—The repayment contract with the Medford irrigation district, dated August 1, 1955, provides for repayment to the United States the actual cost of rehabilitating the district works in an amount not to exceed \$1,475,466. The amount of the annual installments is scheduled as follows: During the repayment period, in which the district is obligated to pay annually on its bonded indebtedness, including interest, not less than \$18,000 with the last payment to be made by December 31, 1969, the annual installment shall be one-eightieth of the rehabilitation and betterment costs as of the preceding December 31. Thereafter the annual installments shall be the amount determined by dividing the unpaid rehabilitation costs by the remaining years (40 years less number of years used in retiring the bonded indebtedness). Payments are to be due and payable on December 31 of the year following the year in which the Secretary notifies the district that the rehabilitation has been completed.

The annual installment may be adjusted, if the district board elects, by adopting the Normal and Percentage variable repayment plan. The amount of the adjusted annual installment would range from 15 percent to 200 percent under this proposed alternative. The annual payment would then be due on or before March 15 of the year following rather than the preceding December 31.

On December 13, 1955, a contract was signed whereby the district would undertake and complete certain specified minor rehabilitation work under the direction of the contracting officer, the district to be reimbursed for its expenditures in the performance of this work in an amount not to exceed \$30,000. All sums expended by the United States for rehabilitation work pursuant to this contract shall be repaid by the district in accordance with the terms of the contract dated August 1, 1955. The authority permitting the district to accomplish such minor work is contained in the act of May 14, 1956 (70 Stat. 155).

A supplemental contract was signed on January 5, 1956, whereby article 9 of the contract dated August 1, 1955, is amended to permit the district to carry out rehabilitation work on joint works

provided the board of directors of the Rogue River Valley irrigation district would approve the work programed.

CONTRACTS

- 1955, August 1: Contract 14-06-100-790 with Medford irrigation district to repay \$1,475,466, the estimated cost of project rehabilitation, in 40 annual installments.
- 1955, December 13: Contract with the Medford irrigation district for the district to perform minor rehabilitation and betterment work and be reimbursed from funds made available for such work in an amount not to exceed \$30,000.
- 1956, January 5: Supplemental contract revising article 9 of the August 1, 1955, contract permitting the district to perform rehabilitation work on joint facilities provided prior approval is obtained from the Rogue River Valley irrigation district.

Rehabilitation program (Rogue River Valley irrigation district).—The rehabilitation and betterment of existing irrigation facilities for the Rogue River Valley irrigation district was authorized by the Secretary pursuant to the act of August 20, 1954 (68 Stat. 752).

The principal features to be rehabilitated are: Joint works which include Four-Mile Dam, Fish Lake Dam and the main canal; Hopkins Canal; and the district's distribution system.

The cost to the district for repair, rehabilitation, and betterment of the project works is estimated to be \$236,534. The district will operate and maintain the project works.

Repayment contracts.—The repayment contract

with the Rogue River Valley irrigation district, dated August 2, 1955, provides for repayment to the United States of the actual cost of rehabilitating the district irrigation facilities in an amount not to exceed \$236,534. The first payment to be due and payable on December 31 in the year following that in which the Secretary notifies the district that the rehabilitation work has been completed. The district may elect to adjust its annual installments by adopting the Normal and Percentage variable repayment plan. The annual payment would then be due on or before March 15 of the year following rather than the preceding December 31.

A supplemental contract was signed on June 5, 1956, whereby it was agreed that article 9 of their contract dated August 2, 1955, would be amended to permit the Medford irrigation district to carry out rehabilitation work on their joint facilities when acceptable to the district's board of directors and evidenced by a resolution approving the work program.

CONTRACTS

- 1955, August 2: Contract 14-06-100-790 with the Rogue River Valley irrigation district to repay the actual cost of the rehabilitation program in an amount not to exceed \$236,534 in 40 equal annual installments.
- 1956, June 5: Supplemental contract revising article 9 of the August 2, 1955, contract permitting the Medford irrigation district to carry out rehabilitation work on their joint facilities when acceptable to the district's board of directors and evidenced by the adoption of a resolution approving the work program.

SALT RIVER PROJECT

PHOENIX, ARIZ.

The construction of the Salt River project in Maricopa County, Ariz., was originally authorized by the Secretary of the Interior on March 14, 1903, in accordance with the act of June 17, 1902 (32 Stat. 388). Rehabilitation and betterment of the project works is being accomplished under authority of the act of October 7, 1949 (63 Stat. 724), as amended.

The project was constructed with the objective of furnishing an adequate water supply to the irrigable lands of the Salt River project, now approximately 240,000 acres. Original project features included the Roosevelt Storage Dam and powerplant, Granite Reef diversion dam and the improved main canals, placed in service in 1910 and completed in 1911. Additional construction was undertaken by the Bureau of Reclamation in 1936 and completed in 1939.

The total actual cost of constructing the Salt River project features was \$20,077,507.69. Of this amount, \$948,718.96, or 20 percent of the cost of Bartlett Dam (contract of June 3, 1935), was assumed by the Bureau of Indian Affairs. After adjustment for reduction by the Board of Review in 1918, for revenues received during construction, and for funding interest and penalties and net operation and maintenance costs, the repayment obligation assumed by the Salt River Valley Water Users' Association was \$17,482,687.89.

Operation and maintenance of the project was transferred to the association in accordance with the contract of September 6, 1917.

Repayment contracts.—Repayment of the original net construction cost, \$10,937,872.36, of the Salt River project in 20 installments was provided in the contract of September 6, 1917. This contract was amended on June 30, 1930, extending the time for payment of unaccrued charges and

reducing annual installments. Final payment under the contracts for original construction cost was made in October 1955. The cost of constructing Bartlett Dam, \$6,544,815.53, is payable in 40 graduated installments under the contracts of November 26, 1935, and October 2, 1939. Payment will be completed in 1979.

PUBLIC NOTICE AND CONTRACTS

- 1904, June 25: Contract with Salt River Valley Water Users' Association provided for collection and payment of cost of irrigation works apportioned by Secretary to shareholders in not less than 10 equal annual payments.
- 1917, January 18: Public notice. Construction charge \$60 per acre, payable in 20 graduated annual installments.
- 1917, September 6: Contract Ilr-307 with Salt River Valley Water Users' Association. Association assumed obligation to repay construction costs of project, payable in 20 graduated installments.
- 1922, July 26: Association granted extension of time for payment of 1920, 1921, 1922, and 1923 charges.
- 1930, June 30, as amended: Contract with Salt River Valley Water Users' Association. Delinquent 1929, 1930, and 1931 charges to be paid in lump sum of \$1,851,232.60. Remainder of debt scheduled to be paid in 20 years, ending December 1, 1951, in graduated installments.
- 1935, November 26 (Ilr-819) and 1939, October 2: Contracts with Salt River Valley Water Users' Association to pay construction costs of Bartlett Reservoir. Estimated cost \$6,600,000, payable in 40 graduated annual installments.

Rehabilitation and betterment contracts.—In 1950 a rehabilitation and betterment program was begun on the Salt River project pursuant to the act of October 7, 1949 (63 Stat. 724), with the total work program to be accomplished scheduled over a period of several years. The general nature and purpose of the rehabilitation and betterment program is to line certain sections of canals, replace

certain laterals with underground pipe, repair and replace certain gates, checks and other irrigation structures, rehabilitate project water wells, and to undertake repair and betterment work on some of the major storage facilities. Contracts covering

such work have been executed annually between the United States and the Salt River Valley Water Users' Association under an original \$6 million program supplemented by a \$10 million congressionally approved extended program, as follows:

Date and number of contract	Total obligation	Amount repaid as of June 30, 1957	Matured charges unpaid
Mar. 29, 1950, 11r-1568 ¹ -----	\$1,361,451	\$293,399	0
June 26, 1951, I76r-681-----	1,245,690	224,224	0

Total-----	6,757,304	1,014,742	0

¹ Amended Oct. 26, 1950 and Jan. 2, 1951.

Repayment of the obligation covered by the foregoing contracts of March 29, 1950, through May 6, 1955, inclusive, is scheduled for completion in 1970. Repayment of the obligation covered by the contract of July 11, 1956, is scheduled for completion in 1986 in accordance with a 30-year repay-

ment period approved by the Congress for the \$10 million extended rehabilitation and betterment program. Under this extended program, it is contemplated that additional annual contracts in the amount of approximately \$1 million per year will be required over a period of 9 more years.

SAN DIEGO PROJECT

SAN DIEGO, CALIF.

Construction of the San Diego aqueduct was undertaken on Presidential directive dated November 29, 1944. The act of April 15, 1948 (62 Stat. 171), ratified the actions theretofore and thereafter taken in construction of the aqueduct. Enlargement of the San Diego aqueduct was authorized by the act of October 11, 1951 (65 Stat. 404).

Construction of the aqueduct was undertaken during World War II in order to relieve the acute water supply situation in the San Diego area associated with increased requirements of the military. With expansion of the military establishment in 1950 and 1951, the Department of Navy obtained authorization in the act of October 11, 1951, for the enlargement of the aqueduct from 85 cubic feet per second to not less than 165 cubic feet per second. The total length of the aqueduct is 71.1 miles, consisting of concrete pipeline, tunnels, connecting structures, and appurtenant works.

The total cost of the first barrel of the San Diego aqueduct as furnished by the Department of the Navy is \$14,407,643, and for the second barrel is \$16,125,015, which figures may be subject to revision by the Navy. Cost of work performed by the Bureau of Reclamation was \$269,485 and \$16,116,598 for the first and second barrels, respectively.

Repayment contracts.—Repayment of the cost of the first barrel of the San Diego aqueduct is provided under contract between the Navy Department acting for the United States, and the city of San Diego dated October 17, 1945. This

contract, which on September 23, 1946 (supplement agreement No. 1), was transferred to the San Diego County Water Authority, provided for payment of an annual rental of \$500,000, beginning with the formal delivery of possession of the aqueduct to the authority. In accordance with supplemental agreement No. 4, dated April 1, 1952, to the contract of October 17, 1945, the cost of the second barrel of the aqueduct will be repaid by the authority in 40 years with interest. The administration of the San Diego aqueduct currently is under the jurisdiction of the Department of the Navy. Administration of the aqueduct will be transferred to the Department of the Interior upon ratification of interdepartmental agreement as provided by act of May 31, 1957 (71 Stat. 41). The authority assumed possession and use on an interim basis from January 1, 1948, to December 31, 1951, of the first barrel and began payment on January 1, 1948, at a rate equivalent to 50 percent of the rental rate prescribed in the contract of October 17, 1945 (supplemental agreement No. 3, dated December 11, 1947). The authority assumed possession of the second barrel on February 28, 1955, and was notified that payments were to start in accordance with supplemental agreement No. 4 of the contract dated October 17, 1945.

CONTRACTS

1945, October 17: City of San Diego. For construction and lease of the San Diego aqueduct. Estimated cost of \$14.5 million to be repaid in annual rentals under lease of \$500,000.

- 1946, April 22: Memorandum of understanding between Departments of the Navy and Interior transferring administration of aqueduct from Navy to Bureau of Reclamation on completion of construction.
- 1947, December 11: San Diego County Water Authority. Permitted authority and Metropolitan water district to assume possession of aqueduct for purpose of operating and maintaining it prior to completion and required payment of a rental rate equal to one-half the annual lease rate prescribed in the contract of October 17, 1945.
- 1952, April 1: San Diego County Water Authority. Construction of the second barrel of the aqueduct at an estimated cost not exceeding \$18 million, repayable over 40 years with interest.
- 1952, May 28: Memorandum of agreement between the Departments of the Navy and Interior providing for the construction of the second barrel and, upon completion thereof, agreeing to amend the memorandum of understanding of April 22, 1946, to provide for the transfer of the administration of first and second barrels of the aqueduct from the Navy to Bureau of Reclamation.

SAN LUIS VALLEY PROJECT

MONTE VISTA, COLO.

The San Luis Valley project was originally authorized on April 10, 1940, by a finding of feasibility by the Secretary of the Interior in accordance with the provisions of section 9 of the Reclamation Project Act of 1939 (53 Stat. 1187). The finding of feasibility, together with related documents, was transmitted to the Congress and printed as House Document 693, 76th Congress. A supplemental finding of feasibility covering the Platoro unit was made in letter of March 7, 1949, from the Secretary of the Interior to the President. Construction of other parts of the San Luis Valley project is contingent upon additional findings of feasibility.

PLATORO UNIT

The Platoro unit, consisting of the Platoro Dam and Reservoir located on the Conejos River in Conejos County, Colo., provides supplemental water for approximately 86,000 acres in the Conejos water conservancy district and controls floods on the upper Conejos River.

The cost of the Platoro unit to June 30, 1957, is \$3,879,567. No further costs are anticipated. According to the authorization, 60 percent of the cost is allocated to irrigation and 40 percent is allocated to flood control.

Repayment contract.—Under terms of the repayment contract of March 31, 1949, the Conejos water conservancy district is obligated to repay 60 percent of the cost of the Platoro unit, not to

exceed \$2,520,000, in 40 consecutive annual installments commencing in 1959. The first 5 of such installments will vary from 1¼ percent of the total obligation to 2¼ percent. The remaining 35 installments will be in equal amounts.

During the 5-year development period, 1954–58, operation and maintenance costs are provided for by appropriated funds. The Conejos water conservancy district will repay the portion of this operation and maintenance costs allocated to irrigation, 60 percent, through water service charges. After the development period, funds for operation and maintenance will be advanced by the water users or they will assume the operation and maintenance responsibility.

CONTRACT

1949, March 3: Contract Ilr-1529 with the Conejos water conservancy district to repay 60 percent of cost of Platoro unit, not to exceed \$2,520,000.

SANPETE PROJECT

SPRING CITY AND EPHRAIM, UTAH

The construction of Sanpete project in Sanpete County, Utah, was initiated under the provisions of the National Industrial Recovery Act of June 16, 1933, and approved by the President on November 6, 1935, under the terms of subsection B, section 4, act of December 5, 1924 (43 Stat. 701).

The project was developed to furnish water to lands under the Ephraim Irrigation Co. and the Horseshoe Irrigation Co. Project features include the Ephraim tunnel and 2 feeder canals and the Spring City tunnel and 2 feeder canals. The project consists of the Ephraim division and the Spring City division.

EPHRAIM DIVISION

The total cost of constructing the Ephraim division was \$206,510. The entire amount, less contributions of \$1,164 and CCC costs of \$14,400, is repayable under the terms of the repayment contract with Ephraim Irrigation Co. The project features are operated and maintained by the Ephraim Irrigation Co.

CONTRACTS

1934, July 11: Contract IIr-765, with Ephraim Irrigation Co. Contract obligation \$190,000, payable in 40 equal annual installments.

1939, September 27: Supplemental contract IIr-765 with Ephraim Irrigation Co. increased contract obligation \$1,000.

SANTA MARIA PROJECT

SANTA MARIA, CALIF.

The Santa Maria project, located in northern Santa Barbara County and southern San Luis Obispo County, was authorized by act of September 3, 1954 (68 Stat. 1190).

The purpose of the project is to provide supplemental irrigation water to the project area by releases into the stream channels for ground-water recharge. The project will also provide some flood-control benefits and is related to authorized Corps of Engineers project for levee construction downstream.

Vaquero Dam and Reservoir, with a capacity of 239,000 acre-feet, will store surplus water of the Cuyama River and release flows after peak discharges on the Sisquoc River have passed. The released flows will recharge the ground water of the area. Substantially all of the land to benefit from the project is included in the Santa Maria Valley water conservation district, which has entered into a repayment contract with the Santa Barbara County Water Agency. The repayment

contract required by the authorizing act was signed by the Santa Barbara County Water Agency on April 6, 1956. Under this member unit contract, the Santa Maria district is to repay the reimbursable costs of the project less a payment of \$50,000 per year which will be met by an ad valorem countywide tax levied by the agency.

The estimated project cost is \$15,058,000, of which \$3,013,000 is allocated to flood control and is nonreimbursable. The remainder will be repaid in 80 equal semiannual installments to begin after a 2-year development period. The 2-year development period is to begin with the first year in which the reservoir stores water.

The project works will be transferred to the Santa Maria Valley water conservation district for operation upon their completion.

CONTRACT

1956, April 6: Contract 14-06-200-5366 with Santa Barbara County Water Agency for \$13,969,000.

SCOFIELD PROJECT

PRICE, UTAH

The construction of the Scofield project in Carbon County, Utah, was approved by the President on June 24, 1943, under the terms of the Water Conservation and Utilization Act of August 11, 1939 (53 Stat. 1418), as amended.

The project was developed to replace the deteriorated Scofield Dam in danger of failure, to provide supplemental water to about 16,000 acres, afford flood protection, and preserve fish life. Project features include the Scofield Dam and Reservoir.

Operation and maintenance of the project was transferred to the district on April 1, 1949.

The total cost of constructing the project features was \$943,837. The reimbursable portion of this cost, \$247,000, is repayable under the terms of the repayment contracts with the Carbon water conservancy district and the Utah State Fish and Game Department.

The cost and repayment allocations:

Total project cost	\$943, 837
<hr/>	
Allocation of reimbursable costs:	
Irrigation	216, 000
Fish and wildlife	31, 000
<hr/>	
Subtotal	247, 000
<hr/>	

268

Nonreimbursable costs:

Irrigation (act of Aug. 11, 1939 as amended) ..	\$303, 837
Flood control	393, 000
<hr/>	
Subtotal	696, 837
<hr/>	

Repayment of reimbursable costs:

From irrigation water users	216, 000
From Utah State Fish and Game Department	31, 000
<hr/>	
Total	247, 000

CONTRACTS

- 1943, October 11: Contract Ilr-1406, between Carbon water conservancy district, the Price River water conservation district, and the United States setting forth certain precedents to actual construction.
- 1944, February 28: Repayment contract Ilr-1415 with Carbon water conservancy district provides for reimbursable construction cost of \$216,000 to be paid by district in 40 equal annual installments.
- 1944, May 26: Contract Ilr-1420 with State of Utah Fish and Game Department provides for use by the State of the inactive reservoir capacity and payment of \$31,000 of the project construction cost.

The summary of status of repayment contracts:

Total value of contracted repayment	\$247, 000
Total matured charges	85, 000
Total matured charges repaid	85, 000
Total matured charges unpaid	0

SHOSHONE PROJECT

CODY, WYO.

The Shoshone project, originally called Cody project, was approved by the Secretary of the Interior February 10, 1904, under authority of the Reclamation Act of June 17, 1902. Heart Mountain power development was found feasible by the Secretary on June 19, 1945, under the provisions of section 9 of the Reclamation Project Act of 1939 (53 Stat. 1193). The Shoshone extensions were authorized as part of the Missouri River Basin project under the provisions of the Flood Control Acts of 1944 and 1946.

The main objective of the project is the provision for irrigating approximately 95,000 acres in public land homesteads which are considered irrigable. The power development features of the project, a normal utilization of the potential energy made available by the dam and reservoir, provides electric energy for large areas of Wyoming. Principal features of the project consist of Buffalo Bill Dam and Reservoir, Shoshone and Heart Mountain powerplants and attendant power transmission facilities, and the Garland, Frannie, Willwood, and Heart Mountain irrigation divisions.

The reserved works, including the dam, powerplants, and transmission system, and Heart Mountain division are operated by the United States. The Buffalo Bill Dam and Reservoir and a portion of the carriage works of the project will also serve lands of the Shoshone Extensions Unit, Missouri River Basin project, of which approximately 2,120 acres may be transferred to the Heart Mountain division. Operation of the reserved works is financed partly by advances from water users and partly from direct appropriations.

The total estimated construction cost of the completed project, including the irrigation and power divisions, Buffalo Bill Dam and Reservoir (\$2,329,478) and an estimate of \$706,000 for rehabilitation and betterment work is \$23,765,230, of

which \$6,061,250 is reimbursable from power revenues, \$1,960,619 has been written off by the acts of May 25, 1926, May 6, 1949, and July 14, 1954, and \$16,130,152 is to be repaid by the water users.

FRANNIE DIVISION

The total costs of the Frannie Division including \$257,000 for rehabilitation and betterment and \$29,973 for transitional development costs are \$3,010,514. In addition to these costs, the water users have contracted to repay \$170,250 as their share of the storage works, and funded charges in the amount of \$223,419. The entire amount, with the exception of \$1,228,876 charged off by authority of the act of May 25, 1926, and \$37,069 of water users' equity in the system is repayable. Operation and maintenance of the division was assumed by the Deaver irrigation district in 1930. The district pays its share of the cost of operating the reserved works by advances to the United States.

There are 20,083 irrigable acres in the division.

Repayment contracts.—The original Deaver irrigation district repayment contract was signed on December 22, 1926. The amendatory contract, signed on November 14, 1949, provides for the repayment of a construction charge obligation of not to exceed \$2,137,259 in annual installments of \$7,500 each. The district may elect to make payment under an agricultural parity-price formula.

Individual contracts within Frannie division provide for the repayment of \$6,558 in construction cost for Montana lands outside of the Deaver irrigation district. In addition, the town of Deaver, Wyo., has contracted for the repayment of \$5,000 for the right to the use of not to exceed 125 acre-feet of water per calendar year.

As of June 30, 1957, there were no delinquent payments on the construction obligation.

PUBLIC NOTICES AND CONTRACTS

- 1917, August 31: Public notice. Construction charge \$66 per acre, 20 graduated installments.
- 1919, August 21: Public notice. Construction charge \$90 per acre, 20 graduated installments.
- 1920, January 28: Public notice. Construction charge \$95 per acre, 20 years.
- 1921, July 19: Public notice. Construction charge \$100 per acre, 20 years.
- 1922, June 3: Public notice. Supplemental construction of drainage works, \$30 per acre, payable in 4 equal annual installments.
- 1924, February 7: Order suspending all public notices and placing division on a water rental basis.
- 1926, December 22: Contract Ilr-97 with Deaver irrigation district, under which District assumes obligation to pay the construction cost of Frannie division, payments to be made on crop-production basis, beginning with the year 1932.
- 1933, June 3: Amendment to 1926 contract. Construction payments 1933-42 postponed to enable district to construct needed drains.
- 1948, June 1: Amendment to 1926 contract. Partial deferment of 1948-49 construction payments pending negotiation of an amendatory repayment contract.
- 1949, November 14: Amendatory repayment contract Ilr-1556 with Deaver irrigation district providing for repayment of construction charge obligation, not to exceed \$2,137,259, including expenditures for rehabilitation and betterment, in annual installments of \$7,500 each beginning in 1952. Payment of 1950 construction charge deferred to permit establishment of reserve fund for operation and maintenance. This contract also provided for the United States to advance a total of \$213,000 to the district to finance an irrigation works and land rehabilitation program. In return for the \$213,000 payment, the district agreed to the inclusion in its repayment obligation of \$170,250 to cover a proportionate share of the cost of Buffalo Bill Reservoir and further relinquish all claims to share in the net revenues and operation of the Shoshone Project powerplants.
- 1953, December 28: Contract No. 14-06-600-513 with the town of Deaver, Wyo., for the repayment of \$5,000 for the right to take and use not more than 125 acre-feet of water per calendar year.

The summary of status of the Frannie division repayment contracts:

Total value of contracted repayment.....	\$2, 148, 817
Total matured charges.....	183, 816
Total matured charges repaid.....	183, 816
Total matured charges unpaid.....	0

GARLAND DIVISION

The total costs including funded charges assignable to the Garland division are \$3,926,156. The act of May 25, 1926, authorized writeoff of construction charges amounting to \$316,253. The act of July 14, 1954, authorized writeoff of

\$405,647; this act also authorized crediting of the Shoshone irrigation district with a share of the net revenues from Shoshone powerplant, amounting to \$426,000, to be applied on the payment of annual construction charges for 1954 and subsequent years until such credit is exhausted. In return for the \$426,000 credit, the district, by amendatory contract of March 29, 1955, pursuant to this act, relinquished all claims to share in the operation of and net revenues from the Shoshone project powerplants. In addition, the water users' have an equity of \$15,622 in the system. Operation and maintenance of the division was assumed by the Shoshone irrigation district in 1927. The district pays its share of the cost of operation of the project storage works. There are 35,950 irrigable acres in the division.

Repayment contracts.—The Shoshone irrigation district repayment contract was signed November 4, 1926, and provides for variable annual payments amounting to 5 percent of the average annual gross crop value per acre of the previous 10 years. As of June 30, 1956, the district had repaid a total of \$2,294,335 which had become due on its construction charge obligation.

PUBLIC NOTICES AND CONTRACTS

- 1907, November 25: Public notice, \$45 per acre, 10 equal annual installments.
- 1909, May 8: Public notice, \$46 per acre, 10 equal annual installments.
- 1911, May 20: Public notice, \$47 per acre, 10 equal annual installments.
- 1912, February 9: Public notice, increased rates for those in arrears to \$50, \$51, and \$52 per acre, and graduated installments over 10-year period.
- 1912, March 23: Public notice for additional homesteads. Rate \$52 per acre, 10 graduated installments.
- 1915, September 25: Public notice for supplemental construction of drainage works. Rate \$7 per acre, payable in additional installments after 20-year period allowed by Extension Act.
- 1917, February 10: Public notice for additional lands. Rate \$59 per acre, 20 graduated installments.
- 1918, July 17: Supplemental construction of drainage works. Rate \$12.50 per acre. Additional installments after 20-year period.
- 1921, July 19: Public notice for additional lands. Rate \$100 per acre, 20 years.
- 1923, April 28: Public notice covering supplemental construction of drainage works. Rate \$11 per acre, payable in 3 installments.
- 1926, November 4: Contract Ilr-88 with Shoshone irrigation district. District assumed obligations of individual water users. Unpaid balances to be paid by district in semiannual installments based on 5 percent of average gross annual per acre income from crops.

- 1929, June 3: Contract Ilr-562 with town of Powell, Wyo., for repayment of \$5,250 construction costs.
- 1949, April 2: Contract I79r-1404 with Wyoming Game and Fish Commission for repayment of \$1,466.21 construction costs.
- 1955, March 29: Amendatory repayment contract 14-06-W-93 with Shoshone irrigation district to establish the irrigable acreage of the Garland division at 35,950 irrigable acres, a net reduction of 6,008 irrigable acres in the division as determined by a reclassification survey in 1951, resulting in a reduction of \$572,459 in the repayment obligation of the district; to credit the Shoshone irrigation district with a share of the net power revenues from Shoshone powerplant, amounting to \$426,000, to be applied on payment of annual construction charges for 1954 and subsequent years until the credit is exhausted; and to establish as \$340,500 the cost of the Buffalo Bill Dam and Reservoir assignable to the district.

The summary of status of the Garland division repayment contracts:

Total value of contracted repayment.....	\$3, 188, 635
Total matured charges.....	2, 361, 769
Total matured charges repaid.....	2, 361, 769
Total matured charges unpaid.....	0

HEART MOUNTAIN DIVISION

The Heart Mountain division is the latest of four irrigation divisions of the Shoshone project to be constructed. Construction was started in 1936, and the distribution system was completed in 1948 except for canal lining and drainage. Project works, consisting of Buffalo Bill Dam and Reservoir and the Shoshone Canyon conduit and appurtenant works serve the Heart Mountain division and will serve, in addition, the proposed Shoshone extensions unit of the Missouri River Basin project. There are 25,973 acres of irrigable land in the Heart Mountain division, with the possibility of 2,120 irrigable acres being added from the Ralston Flat and North Cody Bench areas if they should be transferred from the Shoshone extensions unit of the Missouri River Basin project.

The total estimated cost of constructing the Heart Mountain division is \$8,031,729. This cost covers the Heart Mountain share of features to be used jointly by the Heart Mountain division, the Power division, and the Shoshone extensions unit. Operation and maintenance of the Heart Mountain division prior to the negotiation of a repayment contract is performed by the United States.

Public notices of October 3, 1946, July 7, 1947, and March 18, 1949, opening public land in Heart

Mountain division for settlement, provide that when the total construction charge has been determined and allocated by the Secretary of the Interior, a supplementary notice announcing the total per acre charges will be issued. A repayment contract is being negotiated with the Heart Mountain irrigation district. A small acreage of irrigable land in the the division is available for amendment of existing units.

WILLWOOD DIVISION

The total estimated cost of constructing the Willwood division is \$1,878,818, which includes \$449,000 for rehabilitation and betterment of the irrigation works in the division. Of the total amount of construction cost, \$9,843 has been charged off by the act of May 6, 1949. In addition, the water users have an equity of \$7,464 in the system. The Willwood irrigation district has contracted to repay \$1,870,157. Operation and maintenance of the division was transferred to the Willwood irrigation district on January 1, 1949, under terms of an interim contract, pending approval of the repayment contract.

This division consists of 11,595 acres of irrigable land.

Repayment contracts.—The Willwood irrigation district construction repayment contract, signed May 13, 1949, provides for the repayment of a construction charge obligation of \$1,500,000, of which part is for rehabilitation and betterment of district irrigation works. An amendatory contract, dated June 30, 1952, provides for the payment of \$380,000 for additional rehabilitation and betterment work. Repayment is to be made in annual installments of \$27,400, provided that the district may elect to pay annual installments in accordance with a variable agricultural price-parity formula with base annual installments of \$24,600. The \$164,400 due to June 30, 1956, has been paid on schedule. The district shares in the cost of operating the reserved works.

PUBLIC NOTICES AND CONTRACTS

- 1927, May 11: Public notice. Homesteaders required to pay a certain construction charge per acre in 20 graduated annual installments.
- 1928, June 25: Public notice. Repayment of certain construction charges per acre in 20 graduated annual installments.
- 1929, May 10: Public notice. Repayment of certain construction charges per acre in 20 graduated annual installments.

- 1931, April 22: Public notice. Repayment of certain construction charges per acre in 20 graduated installments.
- 1935, June 18: Public notice. Repayment of certain construction charges per acre in 20 graduated installments.
- 1938, June 22: Public notice. Repayment of certain construction charges per acre in 20 graduated installments.
- 1949, May 13: Contract Ilr-1540 with Willwood irrigation district. Repayment of \$1,500,000 construction charge obligation in annual installments of \$27,400 beginning in 1951.
- 1952, June 30: Amendatory repayment contract I79r-2445 increased district's obligation by \$380,000 to cover additional rehabilitation and betterment work. Repayment of annual rate of \$27,400 to commence on completion of payment on May 13, 1949, contract.

The summary of status of the Willwood division repayment contracts:

Total value of contracted repayment.....	\$1, 870, 157
Total matured charges.....	183, 424
Total matured charges repaid.....	183, 424
Total matured charges unpaid.....	0

POWER DIVISION

The total estimated cost of the power facilities is \$4,275,794, which includes the Power division's share of the storage works, \$866,963. The Power division will also repay from surplus power revenues a total of \$1,492,312, representing a share of the storage works utilized by irrigation and allocated as noninterest bearing investment from all divisions of the project as well as undeveloped areas in the Shoshone extensions unit of the Missouri River Basin project (\$1,698,571); a share of the storage works allocated to Garland and Frannie divisions (\$639,000); and a share of the Shoshone Canyon conduit (\$312,311) to be repaid as yearly rentals.

The Power division is operated by Government forces.

The cost of the division is summarized as follows:

Construction (electric plant in service).....	\$3, 408, 831
Shoshone Canyon conduit rentals.....	312, 311
Irrigation costs to be repaid from power revenues.....	3, 829, 883
Storage system allocated to power.....	866, 963
Total.....	8, 417, 988

As a part of the operating cost, the division annually pays rent for the use of the Shoshone Canyon conduit by the Heart Mountain power-

plant. It is currently estimated that by the end of the repayment period, the Power division will have paid \$312,311 in rent, which sum may be credited against the cost of construction of the conduit.

The total estimated cost of the power facilities is \$3,408,831. The facilities include Shoshone powerplant with a rated capacity of 5,600 kilowatts in three units, the Heart Mountain powerplant with a rated capacity of 5,000 kilowatts in one unit, 158.4 miles of transmission lines, five substations with a capacity of 26,225 kilovolt-amperes and associated general property. In addition, \$866,963 is allocated to the Power division as an appropriate share of the project storage works. Revenues from the sale of power will amortize these direct and allocated power costs and will also accumulate a substantial surplus to the United States for credit against irrigation investments.

As a part of the annual power operating costs, the Power division pays an annual rental for the use of the Shoshone Canyon conduit by the Heart Mountain powerplant, which annual rental contributes toward amortization of the conduit cost and lessens the repayment obligation of irrigation. The sum total of these rental payments by the end of the repayment period, as based upon the use of total capacity for power generation, is currently estimated to be \$312,311.

PAYOUT OF CONSTRUCTION COSTS

Deaver irrigation district.—On June 30, 1957, the unmatured balance of \$1,965,001 amounted to 91 percent of the district's total obligation. The district's repayment contract provides that the 8,043 acres of class 5 land will be reclassified to class 6, or to pay class prior to November 1959, at which time the annual installment will be increased by 62.5 cents per acre in excess of 12,000 acres of assessable land in the district. For each acre of class 5 land that is determined to be permanently unproductive, the repayment obligation will be reduced by \$68.51. The current annual installment of \$7,500 per year may be modified also by the optional application of a formula to vary annual payments with economic conditions.

Shoshone irrigation district.—Seventy-four percent of the district's repayment obligation had been paid on June 30, 1957, leaving \$826,866 as

² \$316,253 act of May 25, 1926; and \$405,647 act of July 14, 1954.

³ Act of May 25, 1926.

⁴ Act of May 6, 1949.

the remaining unmatured balance. Since the contract provides for differential payments by land-class and since the district obligation is the summation of the obligations of individual tracts, the class 1 and 2 lands become paid up first. At this time, 26 percent of the irrigable lands are entirely paid up. More than one-half of the irrigable acreage will be paid up within the next few years. The actual rate of payout will vary also with gross crop value per acre which determines the annual

acre payment. The 1957 installment amounted to \$67,433.

Willwood irrigation district.—About 10 percent of the district's obligation has been paid thus far, leaving \$1,686,733 as the unmatured balance. If the optional basis for varying annual payments with economic conditions is not exercised, the fixed annual installment of \$27,400 per year will pay out the remaining unmatured obligation in 62 years.

SOLANO PROJECT

SOLANO COUNTY, CALIF.

The Solano project, which embraces substantially all of the irrigable land in Solano County, Calif., was authorized by the Secretary of the Interior on November 11, 1948 (53 Stat. 1187), pursuant to the Reclamation Project Act of 1939. The Secretary submitted his findings of feasibility to the Congress of the United States. The plan of the project was set out in House Document No. 65, 81st Congress, 1st session. A water service contract was signed with the Solano County flood control and water conservation district on March 3, 1955. The member-unit contracts were executed on June 28, 1955.

The purpose of the project is to furnish supplemental irrigation water to the lands of the Solano irrigation district and domestic water supplies to the cities of Fairfield, Suisun, Vacaville, and Vallejo.

Monticello Dam and Reservoir, with a capacity of 1,600,000 acre-feet, will store surplus water of Putah Creek with a provision for releases downstream for the normal recharge of ground water along the stream. Water will be diverted at the Putah diversion dam into the 38-mile Putah South Canal to a terminal reservoir. Also included in the plan are 2 major wasteways.

In addition, as a part of the authorized project facilities, are lateral distribution and drainage works needed for the Solano irrigation district. The official estimated project cost is \$52,410,000, including the cost of the distribution and drainage system which aggregates \$15,164,000. At the present time the Solano irrigation district is negotiating with the United States to construct a distribution system with funds advanced by the

United States under the act of July 4, 1955 (69 Stat. 244). A repayment contract for the estimated cost will be negotiated prior to construction.

Project repayment will be accomplished under the water service contract with the Solano County flood control and water conservation district, with the district operating the Putah South Canal and delivering water to the cities and to the Solano irrigation district. The United States will operate the diversion dam and Monticello Dam. A water rate of \$15 per acre-foot for all water delivered to municipalities or to areas of less than 2 acres has been established. Varying water rates have been established for the irrigation water. These rates are \$1.55 per acre-foot during the first 2 years, \$2.05 during the next 3 years, and \$2.65 for the remainder of the payout period. Using these water rates and the estimated water deliveries that are shown in the contract, it is estimated that the project will be repaid in approximately 50 years and that interest at 2.5 percent on the unpaid balance allocated to municipal and industrial will be returned to the Treasury.

Under the act of July 4, 1955 (69 Stat. 244), as amended, the Bureau of Reclamation is authorized to make interest-free loans for the construction of irrigation distribution systems, and under the act of August 6, 1956 (70 Stat. 1044), as amended, to make loans for the construction of small irrigation projects, both under certain criteria established by the authorizing legislation.

Under the distribution system program (69 Stat. 244), a contract for \$12,302,000 has been signed with the Solano irrigation district of Cali-

ifornia. This is the first contract executed. During fiscal year 1958, negotiations with qualified irrigation districts will continue.

The allocation of costs:

Reimbursable:

Main project features:

Irrigation.....	\$32,902,300
Municipal and industrial.....	3,098,700
Power ¹	113,000
Total	36,114,000
Distribution and drainage system..	15,164,000
Total	51,278,000

Nonreimbursable:

Flood control.....	\$1,132,000
Total	52,410,000
Repayment of reimbursable costs:	
By irrigation water users.....	22,018,000
By municipal water users.....	13,983,000
By power revenue ¹	113,000
Total	36,114,000
Distribution and drainage system.....	15,164,000
Total	51,278,000

¹ Allocated to power and reimbursable from power revenues if Monticello powerplant is built. Otherwise to be reimbursed from other project revenues.

STRAWBERRY VALLEY PROJECT

PAYSON, UTAH

The construction of the Strawberry Valley project in Wasatch and Utah Counties, Utah, was authorized by the Secretary of the Interior on December 15, 1905, under the provisions of the Reclamation Act of June 17, 1902 (32 Stat. 388).

The project was developed to furnish water to 42,000 acres of land. Original project features include Strawberry Dam and Reservoir, Indian Creek Dike and Feeder Canal, Strawberry Tunnel, diversion works, powerplant and canal, on Spanish Fork River, Highline Canal, and Mapleton Lateral. The project consists of the Highline division, Spanish Fork division, and the Springville-Mapleton division, with the Strawberry Water Users Association designated as the fiscal agent between the water users and the United States.

The total cost of constructing the project features was \$3,485,419. The entire amount, together with operation and maintenance, and interest and penalties funded, less certain construction revenues and contributions, is repayable under the terms of the repayment contracts with the Strawberry Valley Water Users Association.

The allocation and repayment of costs:

Total project cost.....	\$3, 485, 419
Allocation of reimbursable costs:	
Irrigation.....	3, 485, 419
Repayment of reimbursable costs from irrigation water users:	
For irrigation plant investment.....	3, 485, 419
Operation and maintenance funded.....	60, 671
Interest and penalties funded.....	47, 398
Transitional development costs.....	9, 216
Subtotal.....	3, 602, 704
Less:	
Revenues.....	250, 006
Contributions.....	4, 179
Subtotal.....	254, 185
Total repayment obligation.....	3, 348, 519

282

The Highline Canal is operated and maintained by the Strawberry Highline Canal Co. The Mapleton Lateral is operated and maintained jointly by the Mapleton and Springville irrigation districts. The other project features are operated and maintained by the Strawberry Water Users Association.

Repayment contracts.—The original Strawberry Water Users Association repayment contract was signed March 5, 1906. The amendatory contract signed October 9, 1940, provides for repayment of the remaining obligation of \$1,715,458 in 20 to 40 annual installments.

PUBLIC NOTICES AND CONTRACTS

- 1906, March 5: Contract with Strawberry Water Users Association for project construction and repayment of construction costs.
- 1915, October 8 and October 9: Public notice for Lake Shore and Spanish Fork units. Construction charge \$90 for 2 acre-feet, payable in 20 graduated annual installments.
- 1916, May 13: Public notice for Highline unit. Construction charges \$80 per acre, payable in 20 graduated annual installments.
- 1920, April 26: Public notice increasing construction charge for Lake Shore and Spanish Fork units for lands not applied for to \$108 for 2 acre-feet and for the Highline unit to \$100 per acre.
- 1926, September 28: Contract Ilr-78 with Strawberry Water Users Association. Association assumes obligation under individual water-right applications. Delinquent operation and maintenance charges and penalties funded with construction.
- 1940, October 9: Contract with Strawberry Water Users Association extending repayment period to 40 years.

The status of repayment:

Total value contracted repayment.....	¹ \$3, 349, 424
Total matured charges.....	2, 673, 893
Total charges repaid.....	2, 673, 893
Total matured charges unpaid.....	0

¹ To be adjusted to actual obligation of \$3,348,519.

SUN RIVER PROJECT

FAIRFIELD, MONT.

Construction of the Sun River project was authorized by the Secretary of the Interior on February 26, 1906 in accordance with act of June 17, 1902 (32 Stat. 388).

The project plan provides for utilizing the waters of Sun River and tributaries, conserved and regulated by storage in Gibson, Pishkun, and Willow Creek Reservoirs for the irrigation of approximately 100,000 acres of land. Principal features are the Gibson Dam and Reservoir, about 70 miles west of Great Falls on the North Fork of the Sun River; Willow Creek Dam and Reservoir, about 15 miles southeast of Gibson Dam, on Willow Creek near its confluence with Sun River; Pishkun Reservoir, about 15 miles northeast of Gibson Dam, an offstream reservoir occupying a natural depression with eight dikes to secure the required capacity; Sun River Diversion Dam which diverts water into Pishkun Canal; Sun River Slope Canal which serves all project land on the north side of the Sun River; and the Fort Shaw Canal which serves the Fort Shaw division on the south side of the Sun River. The project consists of the Greenfields Division and the Fort Shaw division.

All costs are allocated to irrigation for repayment.

FORT SHAW DIVISION

The cost of the irrigation features for the Fort Shaw division, as of June 30, 1957, was \$589,110, including the expenditure of \$38,151 for rehabilitation and betterment. Additional costs in the amount of \$12,048 for interest and penalties and \$46,241 for other charges have been funded with these costs, resulting in a gross cost of \$647,399 for the Fort Shaw irrigation district. Chargeoffs made under the act of May 25, 1926, include \$180,001 for 5,238.67 acres of eroded, nonproductive, and flooded lands, plus \$11,909 for adjust-

ment of losses on other lands. This leaves a net cost to the Fort Shaw division of \$455,489. A portion of these costs was not included in the district obligation on June 30, 1957, since it was assignable to a small acreage of irrigable State-owned lands. In addition to the above costs, an operation and maintenance deficit prior to the Reclamation Act of 1914 amounting to \$34,148 also has been written off, pursuant to the act of May 25, 1926.

Operation and maintenance of the division was assumed by the Fort Shaw irrigation district on January 1, 1927.

Repayment contracts.—The original Fort Shaw irrigation district contract was signed on November 10, 1926. The contract provided that the district assume obligations amounting to \$475,840 and that repayment was to be on a crop-production basis, with the annual installment to be 5 percent of average gross acre income for 10 years preceding until the obligation is paid in full. The Commissioner, on January 15, 1954, approved a writeoff of lands under contract in the amount of \$71,068.35. During the fiscal year 1956 an additional writeoff was approved in the amount of \$3,387 on account of class 5 lands that were reclassified as class 6. In fiscal year 1957, 207.10 acres of irrigable public lands were sold with an increase in the district's repayment obligation in the amount of \$7,115. On June 30, 1957, the total construction repayment obligation of the water users was \$408,500, all of which had been repaid except for \$65,707 not yet due. About 60 percent of the acreage is entirely paid up on original construction costs.

Rehabilitation and betterment contracts.—On April 29, 1949, the Fort Shaw irrigation district signed a contract to repay not to exceed \$20,000 for needed rehabilitation and betterment work, including the construction of an adequate drainage

Total matured charges.....	344, 594
Total matured charges repaid.....	344, 594
Total matured charges unpaid.....	0

PUBLIC NOTICES AND CONTRACTS

- 1908, March 26: Public notice. Construction charge \$30 per acre, payable in 10 equal annual installments.
- 1912, March 2: Public notice. Construction charge increased to \$36, payable in 10 graduated annual installments.
- 1919, April 29: Public notice. Opening public lands to entry with construction charge at \$50 per acre.
- 1920, March 24: Public notice. Opening public lands to entry with construction charge at \$60 per acre.
- 1926, November 10: Contract I79R-96 with Fort Shaw irrigation district. District assumes obligations under individual water-right applications. Delinquent charges and penalties funded. Repayment to be on a crop-production basis, with the annual installment to be 5 percent of average gross acre income for 10 years preceding.
- 1949, April 29: Supplemental contract obligating the Fort Shaw irrigation district not to exceed \$20,000 for needed rehabilitation and betterment work including the construction of an adequate drainage system for an area of about 1,200 acres located near the town of Fort Shaw. Repayment scheduled to begin January 1, 1960, in semiannual installments of \$500 and continuing until said charges are fully paid.
- 1951, July 11: Amendment to contract I79r-1295 of April 29, 1949, to increase the maximum obligation to \$40,000 and to increase the rate of repayment to semiannual installments of \$600 beginning January 15, 1956. On December 28, 1955, the irrigation district was advised that the rehabilitation and betterment work had been completed at a total cost of \$38,151.04.

GREENFIELDS DIVISION

The total construction cost of the irrigation features for the Greenfields division, through June 30, 1957, was \$9,488,193. In addition operation and maintenance costs in the amount of \$189,039 have been funded, bringing the total cost to \$9,677,232 as of June 30, 1957. The amount of \$297,752, relating to a portion of the cost of the Greenfields main canal, has been charged off under the authority of Public Law 165, 83d Congress, and \$24,141 of construction revenues accrued, resulting in a net reimbursable cost of \$9,355,339 as of June 30, 1957. \$166,238 of the maximum repayment obligation remains to complete construction.

Operation and maintenance of the division was assumed by the Greenfields irrigation district on January 1, 1931.

Repayment contracts.—The Greenfields irrigation district contracted on June 22, 1926, to repay the construction cost of the irrigation system for the Greenfields division. The total obligation, including funded operation and maintenance amounted to \$9,521,577. Repayment is on a crop-production basis with annual installments at 5 percent of average gross acre income for the 10 preceding years. Repayments commenced in 1937 in accordance with the contract. The State Highway Commission, the Chicago, Milwaukee, & St. Paul Railroad, and others have repaid \$37,272.45 of the district's repayment obligation on account of irrigable land in rights-of-way.

PUBLIC NOTICES AND CONTRACTS

- 1924, January 9: Order. Opening land to entry by contestants with preference rights. Water charges to be announced later.
- 1926, June 22: Contract Ilr-537 with Greenfields irrigation district to repay construction cost of irrigation system for the Greenfields division. Repayment on crop-production basis, annual installments to be 5 percent of average gross acre income for 10 preceding years.
- 1931, May 9: Order. Opening land to entry by contestants with preference rights. Water charges to be paid in accordance with contract dated June 22, 1926.

- 1932, May 27: Order. Opening public lands to entry. Water charges to be paid in accordance with contract dated June 22, 1926.
- 1936, January 10: Order. Opening public lands to entry. Water charges to be paid in accordance with contract dated June 22, 1926.
- 1939, September 21: Public notice. Opening public lands to entry and announcing availability of water for public and private lands. Water charges to be paid in accordance with contract dated June 22, 1926.
- 1940, March 22: Public notice. Opening public lands to entry and announcing availability of water for public and private lands. Water charges to be paid in accordance with contract dated June 22, 1926.
- 1947, February 21: Public notice. Announcing availability of water for public lands and opening of public lands to entry. Water charges to be paid in accordance with contract dated June 22, 1926.

The summary of status of the Greenfields division repayment contracts:

Total value of contracted repayment.....	\$9, 521, 577
Total matured charges.....	1, 417, 930
Total matured charges paid.....	1, 417, 930
Total matured charges unpaid.....	0

Annual operation and maintenance assessments.—The Greenfields division has been turned over to the water users to operate and maintain since December 31, 1926. Advances to the Bureau of Reclamation are made annually for payment of three-fourths of the superintendent's salary from the district's regular operation and maintenance assessments.

TRUCKEE STORAGE PROJECT

RENO, NEV.

The construction of the Truckee storage project was initiated under the provisions of the NIRA of June 16, 1933, and approved by the President on September 21, 1935, under the terms of subsection B of section 4 of the act of December 5, 1924 (43 Stat. 701).

The project was developed to furnish water to approximately 29,000 acres of land in Washoe County, Nev. The project features include Boca Dam and Reservoir with a capacity of 41,142 acre-feet. Besides furnishing irrigation water to project lands, Boca Dam is operated under the Truckee River agreement of June 13, 1935, and provides water for power generation by the Sierra Pacific Power Co. and for the Newlands project, Nevada.

The total cost of constructing the Truckee storage facilities was \$1,092,423. Of this amount, \$1,000,000 is repayable by the irrigators (sec. 3, act of May 29, 1941, ch. 153, 55 Stat. 210). Operation and maintenance of the project was transferred to the Washoe County water conservation district on January 15, 1942.

CONTRACTS

1935, July 1: Agreement between the United States, Washoe County water conservation district, Truckee-Carson irrigation district, Sierra Pacific Power Co., and other users of the waters of the Truckee River, to further conserve the waters of Lake Tahoe and Truckee River by construction of additional storage features which should be so operated as to conform with present decrees and rates of river flow at designated gaging stations and at the same time permit additional benefits to be obtained.

- 1936, December 18: Contract Ilr-952 with Washoe County water conservation district covers \$1,000,000 construction cost of Boca Dam and appurtenant works, to be repaid in 40 equal annual installments commencing in 1944.
- 1937, January 15: Contract Ilr-960 between the United States, Washoe County water conservation district, and the Sierra Pacific Power Co., whereby Boca Reservoir's capacity was increased 800 acre-feet to provide pondage for the power company.
- 1942, January 13: Supplemental contract Ilr-952 with the Washoe County water conservation district. Excess land provisions of the Federal reclamation laws were nullified on the Truckee storage project lands as provided by the act of Congress of November 29, 1940 (Public Law, No. 883, 76th Cong.).

Summary of status of the Washoe County water conservation district repayment contracts:

TUCUMCARI PROJECT

TUCUMCARI, N. MEX.

The Tucumcari project was authorized by act of August 2, 1937 (50 Stat. 577), as amended by act of April 9, 1938 (52 Stat. 211). The finding of feasibility was approved by the President on November 1, 1938.

The project is located in eastern New Mexico in San Miguel and Quay Counties. Project works extend southeast from Conchas Dam to lands of the Arch Hurley conservancy district, adjacent to, and partially surrounding the city of Tucumcari. The purpose of the project is to provide a full water supply for the irrigation of 42,214 acres of semiarid land. Water supply for the project is obtained from Conchas Reservoir, built and operated by the Corps of Engineers, located at the confluence of the Conchas and South Canadian Rivers. The active reservoir capacity for irrigation is 271,400 acre-feet.

The project works consist of a pumping plant for use when the reservoir level is too low for gravity flow, 109.6 miles of canals, 179.5 miles of laterals, 23.8 miles of drains, and 10.0 miles of operating roads. The canal system contains

approximately 5½ miles of tunnels and 6 miles of siphons.

The total completed construction cost is \$15,474,082, all of which is allocated to irrigation. Repayment contracts with the Arch Hurley conservancy district provide for reimbursement in the amount of \$5,901,897, including funded operation and maintenance charges.

Payout schedule.—Under terms of the repayment contract of December 27, 1938, the Arch Hurley conservancy district is obligated to repay \$5,825,471 in 40 successive equal annual installments of \$145,637 commencing in 1959. Repayment in connection with a contract of July 6, 1953, for emergency installation of the pumping plant in the amount of \$76,426 commenced on August 1, 1954, with the first of 5 equal annual installments of \$15,285.

CONTRACTS

1938, December 27: Contract I114-1118 with Arch Hurley conservancy district for \$5,655,000.00.

1953, July 6: Contract 14-06-500-37 with Arch Hurley conservancy district for \$76,426.41.

1953, August 20: Contract 14-06-500-39 with Arch Hurley conservancy district for \$170,470.45.

UMATILLA PROJECT

HERMISTON, OREG.

The Umatilla project in Umatilla and Morrow Counties in Oregon consists of three divisions. The East and West divisions, which originally comprised all of the Umatilla project, were authorized on December 4, 1905, under provisions of the original Reclamation Project Act to furnish irrigation water to approximately 36,000 acres. Construction began in 1906. Land included in the East division is nearly all in the Hermiston irrigation district, and land in the West division is all in the West Extension irrigation district. In 1923 construction of McKay Dam and Reservoir as an additional feature was approved. This dam and reservoir were constructed to store supplemental irrigation water for the South division of the project. The South division consists of the Westland and Stanfield irrigation districts, plus several individual water users.

Project features for the East division include the Cold Springs Dam and Reservoir (an off-stream reservoir), a feeder canal, and the main canal. A diversion dam in Umatilla River and a main canal 26.7 miles in length are the principal features of the West division. McKay Dam and Reservoir is the only feature in the South division with the exception of some rehabilitation work performed in the Stanfield irrigation district.

All project costs are allocated to irrigation for repayment.

EAST DIVISION

The total cost of constructing the East division features was \$2,176,891. Due to the fact that a portion of the area being irrigated contained excessively sandy soils, or was unproductive for other reasons, Congress approved a writeoff of \$863,621 under the Omnibus Adjustment Act of 1926 (44 Stat. 636). By act of June 18, 1954 (68 Stat. 254), Congress approved the current repayment contract in the amount of \$325,071, and also author-

ized an additional chargeoff in the amount of \$807,260. In addition to the contract with the Hermiston irrigation district, there are contracts with three individuals and with the city of Hermiston for repayment of \$7,775.

Operation and maintenance of this division was assumed by the Hermiston irrigation district in 1926.

Repayment contracts.—The first contract for construction of the East division was with the Umatilla River Water Users' Association in 1906. On May 31, 1921, a contract was made with the Hermiston irrigation district, in which the association was released of its guarantee and the liens and responsibilities were assumed by the district. In 1926 the contract was amended so that annual installments on the construction obligation were 5 percent of the previous 10 years' average gross crop return per acre. Payments under this contract were made for only 1 year and part of another. The present contract, dated July 6, 1954, provides for the construction obligation to be repaid in equal annual installments of \$3,150. Present irrigable acreage under this contract is 3,967.

PUBLIC NOTICES AND CONTRACTS

- 1907, December 27: Public notice. Construction charge \$60 per acre, payable in 10 equal annual installments.
- 1912, March 2: Public notice. Construction charge increased to \$70, payable in 10 graduated annual installments.
- 1915 to 1920: Various public notices were issued covering supplemental construction of pipelines at rates ranging from \$7.50 to \$40 per acre. Some payable concurrently with original construction charges and some later.
- 1921, May 31: Contract Ilr-57 with Hermiston irrigation district. District assumes obligations under individual water-right applications and for operation and maintenance deficit. Additional supplemental

construction to be done at estimated cost of \$780,000, payable after original construction has been accrued.

\$3,150 each for a period of 103 years beginning in 1953.

1926, June 23: Contract with Hermiston irrigation district. Repayment on basis of 5 percent average gross crop value of preceding 10 years. Delinquent charges and penalties funded with construction.

1954, July 6: Contract 14-06-W-67 with Hermiston irrigation district. Establishes district obligation at \$325,071, to be repaid in annual installments of

The summary of status of repayment contracts of East division:

SOUTH DIVISION

The South division consists of some 15,000 irrigable acres in the Stanfield and Westland irrigation districts and other water users contracting for storage in McKay Reservoir which cost \$2,260,182. In addition to having a water rental contract for storage, the Stanfield irrigation district has a contract for repayment of \$97,830 expended by the United States for rehabilitation of the distribution system for the district.

Repayment contracts.—On May 3, 1927, the Stanfield irrigation district contracted for 20½ percent of the storage in McKay Reservoir, payable in 40 graduated annual installments. The Stanfield irrigation district made payments on the storage contract as due, but in 1948 the annual installment increased from \$4,000 to \$12,000 and it became apparent the district could not meet the higher payment. As a result of an investigation of economic conditions and repayment ability in the district, an amendatory repayment contract negotiated under section 7 of the Reclamation Project Act of 1939 (53 Stat. 1187), was made effective on November 18, 1949, following congressional approval. The amendatory contract provided that 30 percent of the irrigation water stored each year in McKay Reservoir would be

made available to the district on a water rental basis of 25 cents an acre-foot. Additional water, when available, would also be subject to water rental at the same rate. In addition, the district is to continue repaying its obligation for rehabilitation at the rate provided in earlier contracts.

On April 28, 1931, the Westland irrigation district contracted for 40 percent of the storage in McKay Reservoir, payable in 40 graduated annual installments. The contract with the Westland irrigation district was amended to provide for water rental at 25 cents an acre-foot in an amendatory contract dated November 18, 1949.

Net revenues for McKay water, after operation and maintenance costs of McKay are deducted, will be applied against construction costs.

CONTRACTS

- 1923, September 19: Contract with Stanfield irrigation district for purchase of 15,000 acre-feet of storage in McKay Reservoir. Not to exceed \$800,000, payable in 20 annual installments.
- 1927, May 3: Contract with Stanfield irrigation district, for purchase of 20½ percent of storage in McKay Reservoir, payable in 40 graduated annual installments.
- 1931, April 28 Ir-652, and 1937, May 17: Contracts with Westland irrigation district for 40 percent of storage in McKay Reservoir, payable in 40 graduated annual installments.
- 1934, February 12: Contract with Stanfield irrigation district for betterment of drainage and distribution systems. Cost \$97,830, payable in 39 equal annual installments.
- 1936, January 11: Contract Ir-865 with Oregon State Game Commission for 40 acre-feet of water stored in McKay Reservoir. Cost \$1,400, to be repaid in 20 equal annual installments.
- 1949, November 18: Contract Ir-1549 with Stanfield irrigation district for 30 percent of water stored in McKay Reservoir, at 25 cents an acre-foot of water used each year. Also to complete repayment on rehabilitation obligation as per 1934 contract.
- 1949, November 18: Contract with Westland irrigation district for 30 percent of water stored in McKay Reservoir at 25 cents an acre-foot of water used each year.
- 1956, May 4: Contract 14-06-100-970 with Oregon State Board of Control for 350 acre-feet of water stored in McKay Reservoir. Cost of \$10,500 was paid in lump sum at time contract was completed.
- 1957, May 31: Contract 14-06-100-1218 with Herman Beilke for 2 acre-feet of water stored in McKay Reservoir. Cost of \$60 was paid in lump sum at time contract was completed.

WEST DIVISION

The total cost of constructing the West division was \$874,079. Repayments commenced in 1918, but the West extension irrigation district became delinquent in 1931. In 1926 Congress approved a writeoff of \$24,720 due to the unproductive nature of a portion of the land in the West extension irrigation district. By act of June 18, 1954 (68 Stat. 254), Congress approved the current repayment contract in the amount of \$233,176 and also authorized an additional chargeoff in the amount of \$613,210.

Operation and maintenance of the system has been by the West extension irrigation district since 1926.

Repayment contracts.—Installments on the construction obligation first came due on the West division under individual water-right contracts. The first contract with the West extension irrigation district was on April 6, 1920. The district assumed the outstanding obligation of all the individual water-right contracts at that time. On April 27, 1926, the contract was amended to provide for repayment on the crop production basis, with annual installments 5 percent of average gross crop income per acre for preceding 10 years. The district also assumed operation and maintenance of the system under that contract.

The present contract, dated July 6, 1954, establishes the irrigable acreage at 2,853 and provides equal annual construction payments of \$1,427 each.

PUBLIC NOTICES AND CONTRACTS

- 1916, May 12: Public notice. Construction charge \$92 per acre, payable in 20 graduated annual installments.
- 1917, December 11: Public notice. Construction charge for lands having vested rights. Rates \$14 and \$20 per acre, payable in 10 equal annual installments.
- 1919, May 24: Public notice. Construction charge for lands having vested rights. Rates from \$14 to \$33.10 per acre, payable in 10 equal annual installments.
- 1920, April 6: Contract Ilr-47 with West extension irrigation district. District assumes obligations under individual water-right applications. Sum of \$90,000 to be expended for supplemental construction to be paid in 1938 and 1939.
- 1926, April 27: Contract with West extension irrigation district. Annual installments 5 percent of average gross acre income for 10 preceding years. Delinquent charges and penalties funded with construction.
- 1954, July 6: Contract 14-06-W-68 with West extension irrigation district. Establishes district obligation at \$233,176, to be repaid in annual installments of \$1,427 each for a period of 163 years beginning in 1955.

UNCOMPAGHGRE PROJECT

MONTROSE, COLO.

The Uncompahgre project was authorized by the Secretary of the Interior on March 14, 1903. The project lands are located in the counties of Montrose and Delta in western Colorado.

The original project was built to supply water to 140,000 acres of land. The project features include a diversion dam on the Gunnison River, Gunnison tunnel with a length of 5.79 miles, South Canal having a length of 11.44 miles, 557 miles of main distribution canals, diversion structures and miscellaneous tunnels, and other structures. Since the project has been in operation, Taylor Park Dam and Reservoir and 205 miles of open drains have been constructed in accordance with approval by the President on November 6, 1935.

The total cost of constructing the Uncompahgre irrigation facilities is \$8,965,959. The entire amount, with the exception of the congressional chargeoff, is repayable under the terms of the repayment contract with the Uncompahgre Valley Water Users Association. The Omnibus Adjustment Act of May 25, 1926 (44 Stat. 636), empowered the Secretary of the Interior to make an adjustment of water-right charges on lands that were found to be unproductive. Under the authority of this act, \$2,896,634 construction charges were deducted from the total repayment obligation of the water users.

The allocation and repayment of costs:

Total project cost.....	\$8,965,959
<hr/>	
Allocation of irrigation costs:	
Reimbursable costs.....	6,069,325
Chargeoff by Congress (act of May 25, 1926).....	2,896,634
<hr/>	
Total.....	8,965,959
<hr/>	

Repayment of reimbursable costs:

From irrigation water users:

For irrigation plant investment....	\$6,069,325
Operation and maintenance funded..	490,063
Interest and penalties funded.....	340,230
<hr/>	
Subtotal.....	6,899,618
Less revenues.....	25,601
<hr/>	

Total repayment obligation..... 6,874,017

The project was operated and maintained by the United States from 1908 to 1932. In 1932 the Uncompahgre Valley Water Users Association took over the operation and maintenance of the project.

Repayment contracts.—The original repayment contract Ilr-657 was signed by the Uncompahgre Valley Water Users Association on May 10, 1915. The amendatory contract Ilr-1530 signed December 13, 1948, provides for the full repayment of costs allocated to irrigation, including interest on delinquency, in approximately 99 years—the annual payment of \$60,000 to be paid one-half on May 1 and one-half on August 1 of each year commencing on May 1, 1950.

PUBLIC NOTICES AND CONTRACTS

- 1915, May 10: Contract Ilr-657 with the Uncompahgre Valley Water Users Association. Association agreed to construction of project facilities and assumed cost of obligations.
- 1922, April 12: Public notice fixed 1922 as the year for beginning repayment of the project indebtedness in 20 annual installments.
- 1927, April 8: Contract Ilr-657 with Uncompahgre Valley Water Users Association. Association assumes obligations under individual water-right applications. Unpaid construction and operation and maintenance charges to be paid in 10 and 4 equal annual installments, respectively, with 6 percent interest.

- 1931, August 4: Supplemental contract IIR-657, with Uncompahgre Valley Water Users Association. Repayment period extended to 40 years. All delinquent charges, including 1931 installment, to be paid in annual installments of \$85,000 beginning in 1962.
- 1934, February 16: Supplemental contract IIR-657 with Uncompahgre Valley Water Users Association. Rehabilitation of South Canal and other features. Estimated cost, \$325,000, payable in 40 equal annual installments.
- 1934, May 31: Supplemental contract IIR-657 with Uncompahgre Valley Water Users Association. Association contracted for construction of Taylor Park Dam. Estimated cost \$2,000,000, payable in 40 graduated annual installments.
- 1936, February 17: Supplemental contract IIR-657 with Uncompahgre Valley Water Users Association for construction of drainage works. Estimated cost, \$500,000, payable in 6 equal annual installments starting in 1962.
- 1936, August 23: Supplemental contract IIR-657 with Uncompahgre Valley Water Users Association for concreting Gunnison Tunnel. Estimated cost, \$300,000, payable in 40 annual installments starting in 1940.
- 1940, July 5: Supplemental contract IIR-657 with the Uncompahgre Valley Water Users Association amends the construction costs as outlined in two contracts dated February 17, 1936, and May 31, 1934. The costs shown in the 1936 contract have been increased to \$600,000, while the costs in the 1934 contract have been lowered to \$1,500,000.
- 1948, December 13: Amendatory contract IIR-1530 with the Uncompahgre Valley Water Users Association provides for a new payout schedule of the association's indebtedness to the United States in accordance with the act of May 6, 1949 (ch. 93, 63 Stat. 62). The adjusted indebtedness of \$5,957,912.95, to be paid in \$60,000 installments each year with one-half payable on May 1 and one-half on August 1 starting on May 1, 1950.

The summary of status of the Uncompahgre Valley Water Users Association repayment contracts:

¹ Decrease. Decreases are due to cancellation of water-right applications, funding of delinquent charges, and deferments under relief acts.

² Reduction of obligation due to provisions of 1927 contract.

³ Moratorium period. Acts of Apr. 1, 1932, Mar. 3, 1933, Mar. 27, 1934, June 13, 1935, and Apr. 14, 1936. Construction charges deferred for calendar years 1931, \$95,773; 1932, \$93,196; 1933, \$90,488; 1935, \$90,393; 1936, \$45,036. Construction charges deferred under acts of Aug. 21, 1937, and May 31, 1939, 1937, \$45,164, 1938, \$45,164.

⁴ Reductions in obligations due to adjusting estimated costs to actual costs.

⁵ Charge of class 6 lands, less interest funded and construction deficit.

⁶ Advance payments and water-rental credits.

⁷ Increase in obligation due to new stock subscriptions under provisions of Dec. 13, 1948, contract.

VALE PROJECT

VALE, OREG.

The Vale project was found feasible by the Secretary of the Interior on October 20, 1926, and approved by the President on October 21, 1926, under the provisions of section 4 of the act of June 25, 1910 (36 Stat. 836) and subsection B of section 4 of the act of December 5, 1924 (43 Stat. 702). The project furnishes water to about 32,000 acres of land. Prior to construction, approximately 28,000 acres now in the project had never been under irrigation. The remainder, or about 4,000 acres, were receiving an inadequate water supply through private efforts.

The major works of the project are the Warm Springs storage dam, the Agency Valley storage dam, the Namorf diversion dam, the Vale Main Canal and Bully Creek siphon, and the lateral distribution system. The Warm Springs Dam was built by the Warm Springs irrigation district prior to construction of the Vale project. The United States purchased a half interest in the Warm Springs Dam and Reservoir and installed flashboards on the crest of the dam to increase the storage capacity of the reservoir.

The main units of the project are the Harper and Little Valley unit, the East and West Bench unit, and the Willow Creek unit. The total cost of constructing the project is \$4,866,824. Contributions and other credits amount to \$43,817. Funded operation and maintenance costs are \$199,281. The net cost, which the water users are obligated to repay, is \$5,022,288.

The Vale Oregon irrigation district, the water users' agency, operates and maintains the project. With the exception of the reserved works, the

project was turned over to the water users on January 1, 1949. Operation and maintenance of the reserved works was assumed by the water users on January 1, 1955.

CONTRACTS AND PUBLIC NOTICE

- 1926, October 22: Contract Ilr-64 with the Vale Oregon irrigation district provided for the repayment of construction costs not to exceed \$4,500,000, to be repaid in 39 annual installments.
- 1932, March 28: Supplemental contract increased maximum obligation to \$5,100,000.
- 1949, April 11: Amended contract Ilr-1552, Vale Oregon irrigation district provides for repayment of a maximum of \$5,012,000 under normal and percentage plan as modified by parity and extended payout period to approximately 73 years. Maximum repayment will be reduced to actual cost upon determination.
- 1954, April 21: Notice to district from Assistant Secretary of the Interior stating actual project costs at \$5,022,288.

Rehabilitation and betterment contracts.—The amended repayment contract Ilr-1552 provides for repayment of cost of rehabilitation and betterment of project works not to exceed \$50,000. Repayment shall be in whatever additional installments are necessary, computed in the same manner as the construction and funded operation and maintenance payment.

VENTURA RIVER PROJECT

VENTURA, CALIF.

The Ventura River project, located in western Ventura County in the basin of the Ventura River, Calif., was authorized by act of March 1, 1956 (70 Stat. 32).

A repayment contract pursuant to section 9 (d) and 9 (c) of the 1939 Reclamation Project Act (53 Stat. 1187) and the authorizing legislation was executed on March 7, 1956.

The purpose of the project is to furnish new and supplemental domestic and irrigation water to the project service area. The principal project works are Robles diversion dam on the Ventura River; Robles-Casitas Canal which is about 5 miles long with a capacity of 500 cubic feet per second leading into Casitas Reservoir; Casitas Reservoir, located on Coyote Creek, of 250,000 acre-feet capacity; approximately 33 miles of project conveyance conduit; 7 pumping plants whose aggregate capacity is 140 cubic feet per second and 6 balancing reservoirs with an aggregate capacity of 270 acre-feet.

The total estimated cost of the project is \$27,700,000, including \$100,000 nonreimbursable for minimum recreational facilities in the vicinity of Casitas Reservoir, leaving a total reimbursable cost of \$27,600,000. To date, \$676,983 has been advanced by the local water users. The reimbursable cost is allocated by the repayment contract, 57.33 percent to irrigation and 42.67 percent to municipal and industrial water supply. These project costs are to be repaid in full, including interest on the portion allocated to municipal and industrial water supply at a rate of 2.591 percent per annum. The interest on the municipal and industrial water supply will include interest during construction.

The repayment contract establishes a specified annual payment for both irrigation and municipal and industrial water as follows:

Irrigation (10-year development period):	
1.5 percent next 30 years estimated installment.....	\$229, 785
5.5 percent last 10 years estimated installment.....	840, 500
Municipal and industrial water:	
	<i>Per year</i>
First 5 years.....	\$165, 000
6th through 10th year.....	280, 000
11th through 15th year.....	335, 000
16th through 20th year.....	500, 000
21st through 25th year.....	615, 000
26th through 30th year.....	725, 000
31st through 35th year.....	835, 000
36th through 40th year.....	1, 000, 000

Annual payments will be adjusted to reflect actual costs and the 2.591 percent interest rate. Estimated repayment includes \$9,652,401 interest on the municipal and industrial allocation calculated at 2½ percent.

Under the terms of the repayment contract the project works will be transferred to the water users for operation immediately upon completion.

The payout schedule is based upon the estimated project costs with interest at 2½ percent. It also shows the district's proposed method of financing its obligations under the contract based upon sales of water for municipal and industrial use at \$50 per acre-foot and for irrigation use at \$25 per acre-foot, with the balance to be recovered from taxation. It is assumed that the revenue from taxation will not require an appreciable increase in the district's present tax rates. These taxes have raised the amounts necessary to make the advance payment used for the preparation of plans and specifications.

The cost allocation:

Total cost (reimbursable).....	\$27, 600, 000
Less prepayment.....	676, 983
Net amount to be repaid.....	26, 923, 017

Allocation of costs:

Irrigation (57.33 percent)-----	\$15, 823, 080
Municipal and industrial (42.67 per- cent)-----	11, 776, 920
	<u>27, 600, 000</u>

REPAYMENT BASIS

The portion of annual cost not covered by water sales revenue will be obtained through ad valorem tax levy on all property in district.

Municipal and industrial allocation.—Repayment in 40 years. Annual payments of principal and interest closely proportional to estimated rate of buildup in demand for municipal and industrial water with rate of payment increased in 5 year increments as follows: ¼ percent of total amortiza-

tion cost (interest+principal) annually for 1st to 5th years; 1¼ percent, 6th to 10th; 1½ percent, 11th to 15th; 2¼ percent, 16th to 20th; 2¾ percent, 21st to 25th; 3¼ percent, 26th to 30th; 3¾ percent, 31st to 35th; 4½ percent, 36th to 40th.

Irrigation allocation.—Repayment in 40 equal annual payments without interest, commencing after a 10-year development period. Surplus municipal and industrial revenue (total annual revenue less operation and maintenance costs for municipal and industrial) applied to irrigation repayment after completion of municipal and industrial repayment. Revenues from irrigation water sales in initial 10-year period are assumed to cover operation and maintenance costs. Total repayment by district—\$37,083,342.54.

Payout schedule

Municipal and industrial water

Project year	Fiscal year	Revenue			Annual operation and maintenance costs	Annual payments (principal and interest)	Interest at 2½ percent	Principal payment	Balance to be repaid ¹	Municipal and industrial revenue credited to irrigation

² Expenditure of \$2,116,260, less \$169,000 nonreimbursable for recreation.

³ Recovery of GI funds. Interest computed for full 3 month period on allocation to municipal and industrial.

VERMEJO PROJECT

MAXWELL, N. MEX.

The Vermejo project was authorized by act of September 27, 1950 (64 Stat. 1072). In accordance with section 3 of that act, the President on June 22, 1951, approved the project report. The original act was amended by act of March 5, 1952 (66 Stat. 13).

The project provides for the rehabilitation of existing irrigation facilities for 7,379 acres in the Vermejo conservancy district. The water supply has been stabilized by the enlargement of reservoir No. 2, Stubblefield reservoir and reservoir No. 13. The existing Vermejo diversion dam, Vermejo Canal, Eagle Tail Canal, lateral system, and drainage system have been rehabilitated. The reconstruction of reservoir and dam No. 12, and the construction of subsurface drains are in the plans for the project, but the construction period for these items is indefinite.

The total estimated cost of the project is \$2,822,331, including \$97,863 for bond acquisition. All construction will be completed in fiscal year 1957 with the exception of reservoir and dam No. 12 and subsurface drains.

The tentative allocation of estimated total project costs:

Reimbursable:	
Irrigation.....	\$2, 107, 943
Subtotal—Reimbursable.....	2, 107, 943
Nonreimbursable:	
Irrigation.....	461, 388
Flood control.....	55, 000
Fish and wildlife.....	198, 000
Subtotal—Nonreimbursable.....	714, 388
Total.....	2, 822, 331

The project is operated by the water users.

CONTRACTS

1952, August 7: Contract I78r-458 with Vermejo conservancy district for \$2,010,080.

1954, August 31: Contract I78r-458 with Vermejo conservancy district for \$97,863.33.

Payout schedule.—The contract between United States and the Vermejo conservancy district, dated August 7, 1952, as amended by contract dated August 31, 1954, provides that \$2,107,943 will be paid in variable payments, using \$27,860 as a base charge. Annual installments shall not be more than 175 percent of the base charge and not less than 25 percent of the base charge. Payments will commence in 1963.

W. C. AUSTIN PROJECT

ALTUS, OKLA.

The construction of the W. C. Austin project in Jackson, Greer, and Kiowa Counties of Oklahoma was authorized by the Rivers and Harbors Act of June 28, 1938 (52 Stat. 1215, 1219).

The project was developed to furnish water to 47,809 acres of land and to furnish water for the city of Altus. Project features include the Altus Dam and Reservoir with canal, lateral, and drainage systems.

The total completed construction cost of the W. C. Austin project as of June 30, 1957, amounted to \$12,246,811. The tentative cost and repayment allocations are as follows:

Total project construction cost.....	\$12, 246, 811
Operation and maintenance charges funded.....	438, 697
Total cost.....	12, 685, 508
Reimbursable costs:	
Irrigation (repayment contract).....	2, 182, 188
Irrigation (contributions).....	17, 271
Municipal water.....	1, 080, 000
Subtotal.....	3, 279, 459
Nonreimbursable costs:	
Flood control.....	1, 130, 000
Irrigation.....	8, 276, 049
Subtotal.....	9, 406, 049
Total allocated.....	12, 685, 508

The W. C. Austin project was operated by the Bureau of Reclamation until September 30, 1952, at which time the Lugert-Altus irrigation district

assumed responsibility for the operation and maintenance of the project, with the exception of the storage facilities.

Repayment contract.—The repayment contract was signed on January 12, 1942, with the Lugert-Altus irrigation district in the amount of \$3,080,000, to be repaid in 40 installments. This sum includes a contract (No. Ilr-1372) in the amount of \$1,080,000 with the city of Altus covering a municipal water supply and which is underwritten by the irrigation district. The appropriation act of July 12, 1943 (57 Stat. 451), provided that, of the total construction cost of all features of the project, not to exceed \$3,080,000 shall be reimbursable under the provisions of Reclamation law.

The cost of funded operation and maintenance, in the amount of \$182,188, performed during calendar year 1950, was added to the original repayment contract, bringing the total amount to \$3,262,188.

CONTRACT

1942, January 2: Contract I2r-1375 with Lugert-Altus irrigation district for \$3,262,188 including funded operation and maintenance costs and a contract for \$1,080,000 with the city of Altus.

The summary of status of repayment contracts:

Total value of contracted repayment.....	\$3, 262, 188
Total matured charges.....	572, 523
Total matured charges repaid.....	572, 523
Total matured charges unpaid.....	0

¹ Includes adjustment decrease of \$17,146 to reflect actual funded operation and maintenance.

² Includes adjustment decrease of \$666 to finally adjust funded operation and maintenance.

³ Includes adjustment increase to record nonproject costs of \$360,070 court claims.

⁴ Includes adjustment decrease to remove nonproject costs of \$360,070, court claims.

⁵ Adjusted to remove funded operation and maintenance charges.

⁶ Allocation of cost to be transferred to plant in service for irrigation and municipal water has not been determined.

WASHITA BASIN PROJECT

OKLAHOMA

The Washita Basin project was authorized by act of February 25, 1956 (70 Stat. 28).

The project is located in southwestern Oklahoma in Caddo, Grady, Custer, and Beckham Counties. The proposed project is divided into the Fort Cobb division and the Foss division. Facilities of the Fort Cobb division include a multiple-purpose dam and reservoir on Pond (Cobb) Creek, a pipeline system with sufficient capacity to furnish municipal and industrial water amounting to 7,215 acre-feet annually to the various communities in the area, and irrigation facilities to serve 9,000 acres. Facilities of the Foss division include a multiple-purpose dam and reservoir on the Washita River, a pipeline system with sufficient capacity to furnish municipal and industrial water amounting to 6,326 acre-feet annually to the various communities in the area, and irrigation facilities to serve 16,700 acres. The reservoirs, in addition to the conservation of presently unused water for municipal and industrial and irrigation use, will provide flood control, fish and wildlife and recreational benefits.

The total estimated cost of the project is \$40,600,000. The first construction funds were appropriated for fiscal year 1957, during which

year repayment contracts will be executed, and the initial prime construction contract will be awarded.

The tentative allocation of estimated total project costs:

Reimbursable:	
Irrigation.....	\$9,998,000
Municipal and industrial water.....	13,797,000
Subtotal—reimbursable.....	<u>23,795,000</u>
Nonreimbursable:	
Flood control.....	15,417,000
Fish and wildlife.....	839,000
Recreation.....	549,000
Subtotal—nonreimbursable.....	<u>16,805,000</u>
Total.....	<u>40,600,000</u>
Anticipated repayment of reimbursable costs:	
By irrigation water users.....	6,088,500
By municipal and industrial water users.....	17,706,500
Total.....	<u>23,795,000</u>

Repayment contracts.—Tentative plans provide that repayment contracts will be negotiated with master conservancy districts for repayment of all reimbursable costs.

WEBER BASIN PROJECT

OGDEN, UTAH

The construction of the Weber Basin project was authorized by act of Congress on August 29, 1949 (63 Stat. 677).

The project will provide water to 51,210 acres of new land, a supplemental supply to 24,400 acres, and supplement the municipal and industrial water supply for about 25 cities and communities in Davis and Weber Counties located in north-central Utah. The project features include five storage reservoirs, two hydro powerplants for irrigation pumping, two diversion dams, two aqueducts totaling 27 miles in length, and 70 miles of main canals. About 200 miles of drains will be constructed to reclaim 29,000 acres of waterlogged land and improve 19,000 acres of irrigated land.

The total cost of constructing the above project facilities is estimated to be \$70,523,000, with a reimbursable cost of \$57,832,000. Construction was initiated in December 1952.

Construction costs are allocated to flood control on a nonreimbursable basis in accordance with the Flood Control Act. Costs allocated to recreation are nonreimbursable in accordance with the authorizing act. In accordance with the President's letter of August 30, 1949, the incremental cost of facilities needed to preserve fish and wildlife values in the areas, consistent with the public law, will also be nonreimbursable.

During the construction of project facilities, the operation and maintenance of these features will be by the United States.

Repayment contract.—A repayment contract between the United States and the Weber Basin water conservancy district covering the reimbursable project costs with a maximum obligation of \$57,694,000 was executed on December 12, 1952. The contract provides for a repayment period of 60 years with the irrigation water users to have a development period of not to exceed 10 years and

an optional variable repayment plan, and the municipal water users will pay 2 percent interest on cost allocated to municipal water. The district will make annual payments based on development unit notices issued as project facilities are completed and water made available. Each development unit will have apportioned to it an appropriate part of the total construction obligation.

CONTRACT

1952, December 12: No. 14-06-400-33 contract with the Weber Basin water conservancy district. The district to repay the reimbursable project costs not to exceed \$57,694,000 with each development unit within the district having a repayment period of 60 years.

The allocation and repayment of costs:

Total estimated project cost.....	\$70, 523, 000
Allocation of reimbursable costs:	
Irrigation.....	41, 190, 000
Municipal water.....	16, 642, 000
Subtotal.....	57, 832, 000
Nonreimbursable costs:	
Flood control.....	7, 393, 000
Recreation.....	3, 568, 000
Fish and wildlife.....	1, 730, 000
Subtotal.....	12, 691, 000
Total.....	70, 523, 000
Repayment of reimbursable costs for irrigation plant investment:	
From irrigation water users.....	27, 105, 000
From municipal water users.....	12, 355, 000
From sale of surplus energy.....	1, 730, 000
Subtotal.....	41, 190, 000
For municipal water plant investment: from municipal water users.....	16, 642, 000
Total.....	57, 832, 000

WEBER RIVER PROJECT

OGDEN, UTAH

The Weber River project (formerly First division of the Salt Lake Basin project) in Summit, Morgan, Wasatch, Weber, and Davis Counties, Utah, was approved by the President on January 8, 1927, under the terms of section 4 of the act of June 25, 1910, and subsection B, section 4, act of December 5, 1924 (43 Stat., 701).

The project was developed to furnish a supplemental water supply to about 80,000 acres of land. The project consists of the Echo Dam and Reservoir and the Weber Provo diversion canal.

The total actual cost of constructing the Weber River project features was \$2,724,487. The entire amount, together with interest and penalties funded, less revenues and contributions, is repayable under the terms of the repayment contract with the Weber River Water Users Association, by which the project is operated and maintained.

CONTRACTS

1926, December 16: Symbol Ilr-220, contract with Weber River Water Users Association. Association assumed repayment obligation not to exceed \$3 million in 20 equal annual installments.

1938, December 20: Symbol Ilr-220, supplemental contract Weber River Water Users Association.

314

Association to repay remaining repayment obligation in 30 equal annual payments.

The summary of status of the Weber River Water Users Association repayment contract:

³ \$190,000 of cost and obligation transferred to Provo River Water Users' Association.

WILLISTON PROJECT

WILLISTON, N. DAK.

The Williston project was authorized for construction by the Bureau of Reclamation in 1906 and water was available for irrigation in 1908. Pumps installed on a barge in the Missouri River brought water into a settling basin, and thence into the canal system where pumping was necessary. Individual water-right contracts were entered into with the water users.

By 1914 most of the water-right applicants were in default. The obligations were assumed in 1919 by the Williston irrigation district, which likewise failed to meet the payments due. The project never became fully settled and the landowners were not particularly interested in irrigation after it became available.

In 1924 the Committee of Special Advisers on Reclamation (Fact Finders Committee) found that the history and prospects of the project did not justify its further operation by the Bureau of Reclamation, and recommended that the project be appraised and sold, and the losses incurred charged to the Reclamation fund.

The act of May 26, 1926 (44 Stat. 653), authorized the cancellation of all water-right charges and the release of all liens existing against the lands in the Williston project on account of the water-right charges. The total amount of \$409,094.69 was thus charged off in the accounts of the United States as a loss to the Reclamation fund.

YAKIMA PROJECT

YAKIMA, WASH.

The Yakima project, located in south-central Washington in the drainage basin of the Yakima River and its tributaries, supplies irrigation water to approximately 450,000 acres. In addition to water supply and irrigation works, the project facilities include a 12,000-kilowatt powerplant. The ultimate development will irrigate approximately 465,000 acres and include 2 hydroelectric generating plants, totaling 23,250-kilowatt capacity. The project consists of 7 divisions: Storage, Kittitas, Tieton, Sunnyside, Roza, Kennewick, and Wapato. The latter is operated by the Bureau of Indian Affairs, but receives its water supply from the Yakima project. An additional 100,000 acres are irrigated under water supply contracts with irrigation districts and individuals. Initial construction under the Reclamation Act of 1902 (32 Stat. 388) was authorized on December 12, 1905, when the Secretary of the Interior allocated \$1,000,000 for the Sunnyside division, and \$750,000 for the Tieton division. The Board of Army Engineers report pursuant to the act of June 25, 1910 (36 Stat. 835), recommended that Sunnyside and Tieton divisions be continued as primary projects, and Benton, Kittitas, and Wapato divisions be developed into a general system of storage reservoirs for the Yakima Valley.

The recommendations of the board were approved by the President on January 5, 1911. The investment to date for Government-constructed facilities on the Yakima project totals \$57,178,835.

KENNEWICK DIVISION

The Kennewick division is a combined power and irrigation development which was authorized under act of June 12, 1948 (61 Stat. 382). It is the last unit of the Yakima project to be developed from the water resources of the Yakima River.

The authorization provides for construction of the Chandler power canal and powerplant (12,000-kilowatt capacity); a pumping plant and irrigation facilities to serve approximately 21,000 acres; and improvements for fish and wildlife. The total cost estimate of \$14,978,379 includes construction costs of \$13,911,454, settlers assistance \$13,400, deferred area land classification \$5,404, allocated storage costs of \$506,057, Prosser powerplant obligations of \$65,389, and Prosser costs integrated with Kennewick of \$476,675. Cost allocations were made as follows:

Reimbursable costs:	
Irrigation.....	\$9, 307, 038
Power.....	¹ 4, 441, 407
Subtotal.....	13, 748, 445
Nonreimbursable costs:	
Fish and wildlife.....	1, 229, 934
Total.....	14, 978, 379

¹ Includes \$3,964,732 Kennewick and \$476,675 Prosser integrated costs.

Repayment contracts.—Under an amendatory repayment contract dated July 22, 1953, the Kennewick irrigation district contracted to repay construction costs totaling \$4,809,700. Previously irrigated lands (4,645 acres) will pay \$1,163,300, and new lands (14,526 acres) will pay \$3,646,400. The amount allocated to the old lands is scheduled for repayment over 66 years, whereas the new lands will be allowed a 10-year development period, followed by a repayment period of 56 years.

Net revenues derived from the sale of power, which is to be marketed through the Bonneville Power Administration, are scheduled to repay, over a period of 66 years, the power investment plus over \$4,000,000 of the investment in irrigation facilities.

CONTRACTS

- 1921, April 7: Contract with Kennewick irrigation district provided for the purchase of 150,000 acre-feet of stored and natural flow water; construction of Prosser powerplant (3,000 kilowatts), and rehabilitation of the Highlands (4,300 acres) irrigation system at a cost of \$1,005,000, repayable in 40 semiannual installments.
- 1930, October 11: Contract with Kennewick irrigation district provided for reconstructing the Highlands lateral, pipelines and pumping plant; constructing a powerplant on Prosser-Chandler canal with district paying operation, maintenance, and depreciation. Cost of plant to be returned from sale of surplus power.
- 1953, July 22: Amendatory contract 14-06-W-56 with the Kennewick irrigation district provides for repayment of construction costs totaling \$4,809,700 with old lands (4,645 acres) paying \$3.80 per acre for 66 years and new lands (14,526 acres) paying \$4.48 per acre for 56 years following a 10-year development period.

The Chandler powerplant began operating in February 1956, and irrigation facilities are to be in readiness to begin delivering water in 1957 on a testing basis.

During the irrigation season water flowing in the canal to the Chandler pumping and powerplant (Kennewick division) is used primarily to operate the hydraulic pumps and secondarily to generate power. During the nonirrigation season all available flows are used to produce power. Generation at the Chandler powerplant is marketed by the Bonneville Power Administration.

The development period is scheduled to begin on January 1, 1958, at which time full responsibility for operation and maintenance of the irrigation facilities is scheduled to be taken over by the Kennewick irrigation district.

The status of Kennewick division repayment on June 30, 1956, is as follows:

Total value of contracted repayment.....	\$4, 809, 700
Total matured charges.....	0
Total matured charges repaid.....	0
Total matured charges unpaid.....	0

KITTTITAS DIVISION

The Kittitas division supplies irrigation water to 56,783 acres along the upper reaches of the Yakima River in the Kittitas Valley.

In 1925 a projected irrigation system designed to deliver water to approximately 70,000 acres at an estimated cost of \$9,000,000 was found feasible for construction by the Bureau of Reclamation. Construction work started in 1925 and irrigation operations commenced in 1930. Operation and maintenance responsibility was transferred to the district in 1934 and thereafter continued under district management. The irrigation facilities include: 26 miles of main canal, 1,320 cubic feet per second capacity; Yakima River siphon, 925 cubic feet per second capacity; North Branch Canal, 36 miles long; South Branch Canal, 18 miles long; Wippel pumping plant, 50 cubic feet per second capacity; and about 329 miles of distribution laterals.

Repayment contracts.—Organized under the name of the Kittitas reclamation district in 1911, the district entered into a contract in February 1921 for 372,000 acre-feet of natural flow and storage water from the Yakima project system. This contract was amended in 1945 to reduce the water supply to 342,000 acre-feet, and the district's pro rata share for repayment of storage costs was established at \$2,223,000.

Upon request of the district the lands were reclassified in 1943, and thereafter followed an economic study and report on a repayment plan. The reanalysis resulted in an amendatory repayment contract, dated January 20, 1949, which was specifically authorized by the act of May 6, 1949 (63 Stat 62). The new contract combined the storage and irrigation works obligation in one account totaling \$9,923,058, and provided for annual payments of \$2 per acre on 53,170.1 acres and \$1.50 per acre on 3,613.1 acres, with repayment commencing in 1948. Variations in these basic annual installments are provided for under a formula which adjusts the figure in accordance with crop returns and parity ratio factors. Full repayment of the construction account in 89 years is anticipated.

The Easton diversion dam is part of the United States reserved works, along with the Yakima storage works, for which the district pays its annual pro rata share for operation and maintenance.

CONTRACTS

1921, February 16; 1930, November 1; 1940, June 4; and 1945, January 10: Contracts with Kittitas reclamation district to purchase 342,000 acre-feet of stored water. Estimated cost \$2,223,000. Payable in 80 graduated semiannual instalments.

1925, December 19; 1927, July 5; 1927, July 26; 1928, September 7; 1937, July 6; 1939, June 6; 1940, June 4: Contracts with Kittitas reclamation district for construction of irrigation system.

1949, January 20: Amendatory contract Iir-1532 with Kittitas reclamation district placed the unpaid obligation at \$9,923,058 and provided for repayment under the normal and percentage formula adjusted by parity.

The summary of status of repayment contracts:

ROZA DIVISION

The Roza division was authorized by the President on November 6, 1935. It is operated by the Bureau of Reclamation. The first delivery of water was made to 1,861 acres in 1941. Additional acreage was brought in as rapidly as irrigation facilities were completed, and water was available to the entire 72,000 acres in 1950. Payment of construction charges commenced on 9,420.9 acres in 1946, and, in 1956, a total of 72,000 acres were paying construction charges. The amount paid on the construction account as of June 30, 1956, totals \$963,782. Construction of the Roza powerplant was begun late in 1955 and is scheduled for completion in March 1958.

Repayment contracts.—The Roza division is designated as a high-line development of the Yakima project. The Yakima-Benton (later Roza) irrigation district, established April 26, 1920, contracted with the United States for 285,000 acre-feet of Yakima project water. The water supply contract was amended April 15, 1935, to 375,000 acre-feet and the repayment obligation was fixed at \$2,500,000. The district entered into a contract on December 13, 1935, for the con-

struction of irrigation facilities to serve 72,000 acres; also a 10,000-kilowatt hydroelectric powerplant to supply power for pumping and commercial use. The construction repayment obligation stipulated in the contract was \$15,000,000. The facilities constructed to date include a diversion dam, 95-mile main canal, 6 wasteways, 9 pumping plants, 70 miles of 3.4-kilovolt power transmission line, a power substation and approximately 400 miles of distribution laterals. The construction cost as of June 30, 1957, totals \$19,514,991. Construction costs exceeded the original estimate because of rising costs during and following World War II; consequently the district increased its maximum repayment obligation to \$21,000,000 under an amendatory contract, dated January 17, 1949. Subsequent economic studies and engineering studies, particularly with reference to power features, and the payment capacity of the lands, are incorporated in an "Economic Report and Repayment Plan," dated June 1949. This report provided the basis for further amending the construction repayment contract to provide for annual payments consistent with the ability of the water users to pay and consequent extension of the repayment period. The resulting amendatory contract, dated July 22, 1953, was specifically authorized by the act of June 30, 1954 (68 Stat. 359). Under the contract of July 22, 1953, the Roza irrigation district's maximum construction obligation was changed to \$19,150,000 which excludes cost of power facilities that are to be paid by power revenues.

When the Roza powerplant starts operation in 1958, summer production will be used to operate the division's pumping plants. It is anticipated that power in excess of pumping requirements will be marketed by the Bonneville Power Administration.

Repayment of an additional \$78,100 is covered by contract dated February 10, 1940, with the Terrace Heights irrigation district. It provides for construction of distribution facilities to take water from the Roza Main Canal to serve part of the district lands by gravity to replace previous arrangements under which all water had to be pumped. Total cost was \$78,100, to be repaid in fixed installments.

CONTRACTS

1935, December 13: Contract Ilr-842 with Roza irrigation district to repay construction obligation of \$15,000,000.

1940, February 10: Contract Ilr-1212 with Terrace Heights irrigation district for \$78,100, to be repaid in fixed installments.

1949, January 17: Contract with Roza irrigation district raising the construction obligation to \$21,000,000.

1953, July 22: Contract 14-06-W-69 with Roza irrigation district establishing the construction obligation, including storage, at \$19,150,000. Installments based on \$1 per acre with annual increments of 20 cents until rate reached \$4.10 per acre. Normal

and percentage plus parity plan is optional. Payout will be completed in about 84 years from the year 1942.

The status of Roza division repayment on June 30, 1957, is as follows:

Total value of contracted repayment.....	\$19,228,100
Total matured charges.....	1,113,313
Total matured charges repaid.....	1,113,313

STORAGE DIVISION

A Government-operated division of the Yakima project, responsible for the operation and maintenance of 6 reservoirs (total capacity 1,063,800 acre-feet) and the administration of water supply contracts and distribution of water derived from the Yakima River and its tributaries. Storage and natural flow rights are vested in the United States under a withdrawal agreement, dated May 4, 1905. The rights of prior appropriations were

established by limiting agreements when the Government withdrawal agreement was entered into.

Repayment contracts.—Contracts for repayment of storage system construction costs by irrigation interests total \$3,600,134. Repayments commenced in 1915. On June 30, 1956, a total of \$2,879,832 had been paid on the construction account.

Rehabilitation and betterment.—Rehabilitation and betterment work on the Storage division, costing \$719,262, was completed in 1953. Repayment is being made over a 20-year period by means of special operation and maintenance assessments.

CONTRACTS

1914, August 1: Act provides for reimbursement to Reclamation fund for furnishing of 573 second-feet of water to Yakima Indian Reservation in amount of \$635,000.

1921, February 16, 1930, November 1: Contracts with Kittitas reclamation district to purchase 372,000 acre-feet of stored water. Estimated cost \$2,418,000, payable in 80 graduated semiannual installments.

¹ Increase in obligation due to 1921 agreement with Office of Indian Affairs.² Increase in obligation due to 1921 contract with Kittitas reclamation district.³ Moratorium period. Acts of Apr. 1, 1932, Mar. 3, 1933, Mar. 27, 1934, June 13, 1935, and Apr. 14, 1936. Construction charges deferred for calendar years, 1931, \$22,265; 1932, \$100,640; 1933, \$97,636; 1934, \$97,636; 1935, \$97,536; 1936, \$48,750.⁴ Decrease. Decreases cover amounts deferred under relief acts.⁵ Increase in obligation due to 1935 contract with Roza irrigation district.⁶ Adjustment under act of Feb. 24, 1938. Deferred under act of Aug. 4, 1939, construction charges for calendar years 1939, \$29,640; 1940, \$44,640; 1941, \$29,640.⁷ Decrease. Kittitas amendatory contract of June 20, 1949, includes the Storage contract of Feb. 16, 1921, as amended.⁸ Decrease. Roza amendatory contract of Jan. 17, 1949 includes the storage obligation originally covered by contract of July 8, 1921 as amended.

1921, March 31: Agreement with Office of Indian Affairs to purchase 250,000 acre-feet of stored water for Yakima Indian Reservation. Estimated cost \$1,625,000. By act of February 24, 1938, repayment period extended to 40 years.

1921, July 8, and 1935, April 15: Contracts with Roza irrigation district to purchase 375,000 acre-feet of stored water. Estimated cost \$2,500,000. Payable in 80 graduated semiannual installments.

1931, July 11: Warren Act contract Ilr-15 with Snipes Mountain irrigation district for sale of water. Obligation of \$28,740 was based on estimated cost of \$10 per acre-foot, subject to adjustment.

1936, September 3: Agreement with Office of Indian Affairs to purchase 100,000 acre-feet of stored water. Estimated cost \$800,000, payable in 40 equal annual installments.

1945, January 5: Contract Ilr-1439 with Granger irrigation district for sale of water. Repayment based on estimated cost of \$7.50 per acre-foot for 20 years, subject to adjustment.

1945, January 22: Contract Ilr-1430 with Outlook irrigation district for sale of water at \$7.50 per acre-foot for 20 years, subject to adjustment.

In addition, there are contracts to purchase stored water with 34 districts, companies, and individuals.

The status of Storage division repayment on June 30, 1957, is as follows:

Total value of contracted repayment..... \$3, 600, 134
 Total matured charges..... 2, 902, 195
 Total matured charges repaid..... 2, 902, 195
 Total matured charges unpaid..... 0

The status of rehabilitation and betterment (Storage division) repayment on June 30, 1957, is as follows:

Total value of contracted repayment..... \$719, 262
 Total matured charges..... 213, 333
 Total matured charges repaid..... 213, 333
 Total matured charges unpaid..... 0

SUNNYSIDE DIVISION

This division was authorized for construction under the Reclamation Act on December 12, 1905. Authorization included provisions for the purchase of an irrigation system built by the Washington Irrigation Co. serving approximately 45,000 acres. Subsequent development by the Government enlarged the system to irrigate 103,570 acres. The major unit of this division is the Sunnyside Valley irrigation district, totaling 76,141 irrigable acres, and 27,429 acres are included in minor units listed as follows:

	<i>Acres</i>
Granger irrigation district.....	1,600
Outlook irrigation district.....	4,741
Grandview irrigation district.....	3,941
Snipes Mountain irrigation district.....	1,915
Prosser irrigation district.....	2,155
Sunnyside Valley irrigation district.....	4,630
Zillah irrigation district.....	106
Small operators.....	8,341

The first six irrigation districts listed above are under contract with the United States for repayment of construction accounts.

On March 1, 1945, management of the Sunnyside division was transferred to a board of control, made up of 12 members representing the irrigation districts and operating units.

On June 19, 1952, the Sunnyside Valley irrigation district made final payment of \$21,298.91, thereby paying off its construction obligation to the Government totaling \$2,270,050.23.

A contract debt of \$4,184,933 has been assumed by water users for construction of the Sunnyside division. Repayments began in 1908. On June 30, 1957, \$3,920,291 had been paid. The unpaid balance of \$264,642 represents amounts payable under construction repayment contracts with 4 small irrigation districts.

Rehabilitation and betterment.—Rehabilitation and betterment of discharge lines, siphons, and Spring Creek pumping plant for the Prosser irrigation district has been completed at a cost of \$98,036. Repayment is covered by a \$100,000 provision in the district's contract, and is combined with the district's regular construction obligation.

PUBLIC NOTICES AND CONTRACTS

- 1908, November 18: Public notice. Construction charge \$52 per acre, payable in 10 equal annual installments.
- 1914, October 16: Warren Act contract IIr-458 with Sunnyside irrigation district for \$240,760 as share of project works plus additional costs, repayable in fixed amounts. Payment secured from the district by issuance and retirement of bonds deposited with the United States.
- 1914, November 16; 1917, April 4; 1926, June 11; and 1932, September 26: Contract IIr-15 with Snipes Mountain irrigation district for construction of pumping plant and for water supply, repayment in 40 years from 1916.
- 1914, November 23; 1916, August 1; 1919, July 1; 1932, December 20: Contract I23r-15 with Outlook irrigation district for construction of pumping plant and for water supply, repayment in 40 years from 1917.
- 1916, August 4; 1927, May 2; 1932, July 5: Contract IIr-160 with Grandview irrigation district for construction of pumping plant and for furnishing water supply, repayment in 40 years from 1917.
- 1917, December 1; 1919, February 27; 1922, November 7; and 1932, January 1: Contracts with Prosser irrigation district for construction of pumping plant and for water supply, repayment in 40 years from 1919.
- 1918, May 6: Public notice. Construction charge \$52 and \$75 per acre, payable in 20 graduated annual installments.
- 1922, September 29: Contract IIr-464 with Zillah irrigation district providing water right for 108.12 acres at cost of \$6,836.50, repayable under fixed, graduated annual installments.
- 1922, November 20, and 1932, June 7: Contracts IIr-455 with Granger irrigation district for construction of pumping plant and for furnishing water supply, repayment in 40 years from 1924.
- 1942, December 28 and 1949, August 2: Contract IIr-1395 with Sunnyside irrigation district. Assessments determined under normal and percentage procedure of 1939 act, including ceiling of 175 percent of base rate.
- 1949, November 25: Amendatory contract IIr-1551 with Prosser irrigation district for rehabilitation and betterment of district's canal and distribution system plus previous unpaid obligation. Base rate is \$6,770 annually. Reaffirms operation under Sunnyside Board of Control.

The status of Sunnyside division repayment on June 30, 1957, is as follows:

Total value of repayment contracts.....	\$4,184,933
Total matured charges.....	3,920,291
Total matured charges paid.....	3,920,291
Total matured charges unpaid.....	0

TIETON DIVISION

Construction of the Tieton division was authorized by the Secretary of the Interior on December 12, 1905, and construction commenced in 1906. Water was first delivered to farms in 1910. Water is diverted from the Tieton River and is carried in a semicircular, concrete flume a distance of 12 miles. A distribution system of canals, flumes, and pipelines supplies irrigation water to 27,353 acres. This is one of the leading apple-producing districts of the nation.

The water-users management and operating organization is the Yakima-Tieton irrigation district. The district will continue to pay its pro rata share of the cost of operation and maintenance of the storage system.

Repayment contracts.—Final payment on the district's original principal construction obligation of \$3,449,114 was made in February 1947. On March 1, 1947, operation and maintenance responsibility was officially transferred from the Bureau of Reclamation to the Yakima-Tieton irrigation district.

PUBLIC NOTICES AND CONTRACTS

- 1910, November 7: Public notice. Construction charge \$93 per acre, payable in 10 equal annual installments.
- 1918, July 18, and 1936, January 11: Contracts with Yakima-Tieton irrigation district for supplemental construction work. Cost \$372,057, payable in 8 equal semiannual installments beginning with year 1940.
- 1920, July 29: Public notice. Construction charge \$110 per acre, payable in 20 graduated installments.
- 1929, October 27: Contract with 'Tieton Water Users' Association for purchase of water appurtenant to cancelled water-right applications. Cost \$65,901, payable in 40 graduated semiannual installments beginning with year 1930.
- 1945, January 6: Contract provides for purchase of 12,000 acre-feet of additional storage and natural flow during April, May and June, and 6,000 acre-feet during July, August, September and October at an approximate cost of \$135,000, repayable in 20 semiannual installments on January 1 and July 1 each year beginning July 1, 1946.
- 1946, January 3. Contract provides that district assume liability for and pay the uncollected accrued construction, operation and maintenance charges up to and including 1946 with penalties and interest and the unaccrued balance owing for construction charges. Included were construction charges on 3,032 acres of class 5 land in order that the water be retained. Maximum obligation \$25,000, payable in 2 equal installments beginning July 1, 1977.
- 1946, November 20: Contract provides that the district act as fiscal agent in collecting operation and maintenance charges from water users.
- 1947, February 5: Supplemental contract provides that upon payment of \$19,630.98, the district assume operation and maintenance effective March 1, 1947.

The status of Tieton division repayment on June 30, 1957, is as follows:

Total value of contracted repayment	\$3, 449, 114
Total matured charges	3, 449, 114
Total charges paid	3, 449, 114
Total matured charges unpaid	0

¹ Decrease: Decreases cover delinquent charges funded, charges deferred under relief acts, and cancellation of water-right applications. 1915—Reclamation Extension Act, Aug. 13, 1914.

² Moratorium period, acts of Apr. 1, 1932, Mar. 3, 1933, Mar. 27, 1934, June

13, 1935, and Apr. 14, 1936. Total amount deferred for calendar years 1931 to 1936, \$643,254.

³ Construction charges deferred under acts of Aug. 21, 1937, May 31, 1939, and Aug. 4, 1939, calendar years 1937, \$5,329; 1938, \$3,010; 1939, \$46; 1940, \$93,014; and 1941, \$93,014.

YUMA PROJECT

ARIZONA-CALIFORNIA

Construction on the Yuma project in Imperial County, Calif., and Yuma County, Ariz., was authorized by the Secretary of the Interior on May 10, 1904, in accordance with section 4 of the Reclamation Act of June 17, 1902 (32 Stat. 388). It was proposed to irrigate by gravity flow 15,000 acres of agricultural lands in the Reservation division (Imperial County) and 50,000 acres in the Valley division (Yuma County). The area to be ultimately served in the Reservation and Valley divisions is now estimated at 14,645 and 53,450 acres, respectively. Original project features included the Laguna Dam, Yuma Main Canal, Colorado River siphon, distribution canals and laterals, and drainage systems.

Following is a tentative allocation of total estimated costs:

<i>Feature</i>	<i>Cost</i>
Laguna Dam.....	\$2, 190, 206
Boundary pumping plant.....	173, 538

<i>Feature</i>	
Canals.....	\$1, 649, 677
Laterals.....	1, 479, 934
Drains.....	768, 064
Farm units.....	29, 482
Canal protection.....	226, 660
General facilities.....	73, 309
Powerplant.....	373, 637
Switchyard.....	32, 961
Transmission line.....	135, 243
Abandoned irrigation facilities.....	111, 910
Abandoned power facilities.....	60, 876
Railway crossing under construction.....	4, 519
Drain maintenance.....	7, 515
Cost to June 30, 1957.....	7, 317, 531
Completion of railway trestle.....	170, 787
Less maintenance costs.....	7, 515
Total estimated construction cost.....	7, 480, 803
Less costs assumed by other projects.....	1, 784, 968
Service facilities (operation and maintenance).....	34, 020
Allocable cost.....	5, 661, 815

Item	Reservation division	Valley division	North Gila Valley	Total

Total obligation.....	991, 314	4, 374, 563		5, 365, 877

¹ Includes \$7,515 to cover construction work in progress to be charged to operation and maintenance.

² Includes \$80,306 drainage costs repayable by the Yuma County Water Users' Association in accordance with contract No. 176-671, art. 16 (c).

³ Includes \$341,092 water rentals during construction.

Laguna Dam.—The Laguna Dam and auxiliary works were constructed originally for the purpose of diverting water for the irrigation of approximately 126,000 acres of land in the Yuma project on the California and Arizona sides of the Colorado River. The cost of the dam structure and headworks is \$2,190,206 and was included in the original cost of \$7,317,531 for the Yuma project, and in the public notices announcing the repayment obligation. These costs were allocated to the lands in the Reservation, Valley, Gila, and Mesa (Yuma Auxiliary project) divisions of the Yuma project.

Later it was planned that the All-American Canal, when built, would connect at Laguna Dam. Under date of October 23, 1918, a contract was entered into between the United States and the Imperial irrigation district, which provided, among other things, for the diversion at Laguna Dam of all water needed by the district for the irrigation of its lands, and a main canal, entirely within the United States, for the carriage and transportation of such water for delivery to such lands. For the right to use the Laguna Dam, and the Main Canal (Yuma Main Canal), the district agreed to pay, and has paid the United States, \$1,600,000. In 1934 the Coachella Valley County water district and the city of San Diego assumed a portion of the cost. Payments by the Imperial irrigation district began in 1920. The total obligation of these contractors in the amount of \$1,608,640 has become due and has been paid in its entirety.

Because Laguna Dam is considered to be a necessary adjunct to the Imperial Dam, under the provisions of article 21 of the 1932 Imperial district contract, any agency that contracts with the United States for delivery of water through the All-American Canal is required to assume such proportion of the total cost (capital and operation and maintenance costs) of all jointly used works, including Laguna Dam, as the Secretary of the Interior may determine to be equitable and just.

Since the payments by the California interests constitute an overlap of charges accruing against the Yuma project, the Yuma water users have been receiving credits (acts of June 28, 1926, 44 Stat. 776, and February 26, 1929, 45 Stat. 1321), on construction and operation and maintenance charges for the payments made by the Imperial irrigation district, et al.

Determination of repayment obligation as of June 30, 1946:

Construction cost.....	\$1, 600, 000
Penalties funded.....	8, 640

Total.....	1, 608, 640

Repayment completed.

CONTRACTS

- 1918, October 23: Contract with Imperial irrigation district to pay cost of Laguna Dam in the amount of \$1,600,000 in 20 graduated annual installments.
- 1934, October 15: Contract with Coachella Valley County water district under which district assumes obligation to pay portion of debt of Imperial irrigation district.
- 1934, October 2: Contract with the city of San Diego under which the city assumes obligation to pay portion of debt of Imperial irrigation district.

North Gila Valley.—The North Gila Valley is now a part of the Gila project, and for the most part is included in the North Gila Valley irrigation district. Under terms of a contract executed on May 12, 1953, amended and supplemented by contract of June 24, 1954, the North Gila Valley irrigation district assumed an obligation of \$108,300 of the costs of the former Gila division costs of the Yuma project, which costs have been transferred to Gila project accounts. The balance of \$383,738 of Gila division costs is nonreimbursable pursuant to the act of September 2, 1950 (64 Stat. 576).

RESERVATION DIVISION

Total construction costs for the Reservation division features, as of June 30, 1957, amounted to \$1,034,586, of which \$991,314 is repayable under water-right contracts. The Reservation division, located in California, comprises Indian lands and white ownerships in the Bard unit under individual water-right applications. The operation and maintenance of the division is performed by the United States with appropriated funds.

Repayment.—Annual construction charges are assessed and collected by the United States from individuals with water rights on the Reservation division. Construction charges, fixed by Public Notice No. 1, amounted to \$55 per acre, payable in 10 graduated annual installments. Public Notice No. 2 increased the construction charges to \$66 per acre, payable in 10 graduated annual

¹ Moratorium period. Acts of Apr. 1, 1932, Mar. 3, 1933, Mar. 27, 1934, June 13, 1935, and Apr. 14, 1936. Construction charges deferred for calendar years 1931, \$96,000; 1932, \$96,000; 1933, \$96,000; 1934, \$96,000; 1935, \$96,000; and 1936, \$48,000.

² Decrease. Covers amount deferred under relief acts.

³ Construction charges deferred under act of Aug. 4, 1939, for year 1939, \$97,159; 1940, \$86,440.

installments. Public Notices No. 21 and 22 each announced an additional \$5 per acre supplemental construction charge for the power system and flood protection works, increasing the construction charge to \$76 per acre. Public Notices No. 65 and 66, issued under authority of act of October 25, 1949 (63 Stat. 903), canceled the accrued increased charges under Reclamation Extension Act of 1914 (38 Stat. 686) and fixed the construction charge at \$76 per acre where applications were made by, or before, September 4, 1952. After that date an increase of 5 percent per year is added as provided in the Reclamation Extension Act.

PUBLIC NOTICES

1910, January 12: Public notice. Construction charge of \$55 per acre, due in 10 graduated annual installments.

1912, March 7: Public notice. Construction charge of \$66 per acre, due in 10 graduated annual installments.

1918, March 9: Public notice. Construction charge of \$90 per acre, due in 20 graduated annual installments.

1925, November 11: Public notice. Supplemental construction of power system. Rate of \$5 per acre, due in 12 equal annual installments commencing in 1925.

1925, November 19: Public notice. Supplemental construction of protective works. Rate of \$5 per acre, payable in one installment after regular charges.

1947, August 22: Public notice. Construction charge of \$76 per acre, payable in 20 years.

1951, September 4: Public notice. Eliminated increased construction charges under Public Notice No. 6.

1951, September 4: Public notice. Set construction charge at \$76 per acre, payable in 20 years.

1957, January 21: Public notice. Construction charge of \$76 per acre on newly included lands, payable in 20 years.

The summary of status of repayment of Reservation division:

Total value of contracted repayment	\$991,314
Total matured charges	925,513
Total matured charges repaid	925,370
Total matured charges unpaid	143

¹ Decrease. Decreases cover cancellation of water-right applications and deferrals under relief acts. Fiscal year 1952 decreases due to reduction of irrigable acreages resulting from revised farm unit plats and reduction of construction rate in accordance with Public Law 383, 81st Cong.

² Moratorium period. Acts of Apr. 1, 1932, Mar. 3, 1933, Mar. 27, 1934, June 13, 1935, and Apr. 14, 1936. Total amount deferred for calendar years 1931 to 1936, \$36,816.

VALLEY DIVISION

Construction costs of the Valley division features, as of June 30, 1957, amounted to \$4,072,704. The Yuma County Water Users' Association has assumed a fixed repayment obligation in the amount of \$4,374,563 under the terms of the repayment contract dated April 1, 1957. The operation and maintenance of the Valley division was assumed by the Water Users' Association on July 1, 1951.

Repayment contracts.—Public Notice No. 6,

issued April 6, 1917, fixed the construction charges at \$75 per acre, payable in 20 graduated installments. Public Notices No. 21 and 22, dated November 11 and 19, 1925, each announced an additional \$5 per-acre charge for supplemental construction of a power system and flood-protection works, respectively. Payments under Public Notice No. 21 were payable in 12 annual installments, and a single payment under Public Notice No. 22 was to be made after all other regular charges were completed. Public Notices No. 65 and 66, issued on September 4, 1951, as a result of the act of October 25, 1949 (63 Stat. 903), canceled the increased construction charges accrued under the Reclamation Extension Act of 1914 (38 Stat. 686) and fixed the construction charge for all irrigable lands at \$85 per acre with a 5 percent increase each year for those private lands making application after September 4, 1952. Under repayment contract executed by the Yuma County Water Users' Association on February 5, 1931, payment of unaccrued construction costs of Valley division features, exclusive of amounts due under Public Notice No. 21, were to be repaid in 30 years with the association guaranteeing payment.

Repayment contract dated June 15, 1951, provided, among other things, for the transfer of the care, operation, and maintenance of the Valley division to the association. This transfer was effective July 1, 1951.

Pursuant to the act of June 29, 1956 (70 Stat. 409), a contract to establish a fixed repayment obligation for the association was executed on April 1, 1957. This obligation, which was \$116,040 at June 30, 1957, is to be decreased by the Valley division's share of any amount by which the actual cost of the Southern Pacific Trestle over the Yuma Main Canal varies from the estimated cost used in determining the above obligation. The total obligation will be repaid over a period of 7 years. In return for the assumption of a fixed obligation, this contract releases the association from its guaranty of amounts due for unaccrued construction charges as provided in the February 5, 1931, contract.

PUBLIC NOTICES AND CONTRACTS

1906, May 31: Contract with Yuma County Water Users' Association for construction of works of the Valley division.

1917, April 6: Public notice. Construction charge \$75 per acre, payable in 20 graduated annual installments.

- 1925, November 11: Public notice. Supplemental construction charge of \$5 per acre for power system.
- 1925, November 19: Public notice. Supplemental construction charge of \$5 per acre for flood-protective works.
- 1930, May 19: Public notice. Construction charge of \$123.09 per acre, payable in 20 graduated annual installments.
- 1931, February 5: Contract Ilr-635 with Yuma County Water Users' Association whereby the association assumed obligation under individual water-right applications. Repayment period extended to 30 years.
- 1947, August 22: Public notice. Construction charge of \$85 per acre, payable in 30 years for newly included lands.
- 1951, June 15: Contract 176r-671 with Yuma County Water Users Association for transfer of operation

- and maintenance of Valley division to association, and repayment of \$80,306 of costs of drainage.
- 1951, September 4: Public notice. Eliminated increase in construction charges under Public Notice No. 6.
- 1951, September 4: Public notice. Construction charge set at \$85 per acre, payable in 30 years for all lands.
- 1957, April 1: Contract with Yuma County Water Users' Association whereby the association was released from its obligation under individual water-right applications and assumed a fixed repayment obligation.

Miscellaneous water contracts.—The following miscellaneous water contracts have been executed on the Valley division, with the contractors receiving water service from Valley division facilities:

Individual or organization	Date of contract	Type of contract	Contract period	Date of initial water deliveries	Rate of payment per acre-foot
Arizona Edison Co.-----	June 12, 1945	Supplemental water----	Dec. 31, 1970----	June 1945-----	¹ \$2
Yuma Union High School-----	Jan. 1, 1953	Miscellaneous-----	Indefinite-----	Jan. 1, 1953-----	(²)
Jay Brazeel-----	Jan. 1, 1953	-----do-----	-----do-----	Jan. 1, 1951-----	(²)

¹ Minimum charge of \$500 for 250 acre-feet of water. Excess used over 250 acre-feet at \$2 per acre-foot.

² Charge payable to Yuma County Water Users' Association in accordance with annual public notice.

¹ Decrease. Decreases cover cancellation of water-right applications and deferrals under relief acts.

² Moratorium period. Acts of Apr. 1, 1932, Mar. 3, 1933, Mar. 27, 1934, June 13, 1935, and Apr. 14, 1936. Construction charges deferred for calendar years 1931, \$61,280; 1932, \$124,336; 1933, \$142,221; 1934, \$145,682; 1935, \$140,176; 1936, \$39,357.

³ Construction charges deferred under act of Aug. 4, 1939, year 1940, \$62,871; 1941, \$61,990.

⁴ Adjustment of future years' accruals due to payment in full of water-right contracts.

⁵ Increase.

⁶ Reduction in obligation resulted from establishment of a fixed repayment obligation in accordance with contract of Apr. 1, 1957, and act of June 29, 1956 (70 Stat. 409).

YUMA AUXILIARY PROJECT

YUMA, ARIZ.

The Yuma Auxiliary project was authorized by the act of January 25, 1917 (39 Stat. 868). Original plans for irrigating agricultural lands in the Yuma project included 45,000 acres on the adjacent Yuma Mesa to be known as the Yuma Auxiliary project, which would receive its water by a pump lift of 72 feet from the East Main Canal in the Valley division of the Yuma project.

A public notice, issued October 3, 1919, authorized the sale of public lands and the construction of a distribution system to irrigate part 1 of unit B of the Yuma Auxiliary project.

Original construction costs of the Auxiliary project amounted to \$2,264,007 of which \$622,955 will be repayable by water users. Costs allocated to lands outside the Yuma Auxiliary project, as limited by the act of June 13, 1949 (63 Stat. 172), totaling \$1,641,052, were made nonreimbursable thereby. Of this amount, \$618,670 was offset by the application of Imperial irrigation district credits in accordance with section 3 of the act of June 13, 1949 (63 Stat. 172). As of June 30, 1957, \$616,973 of original construction costs were actually covered under existing water rights, with remaining costs to be recovered by future water-right applications. In addition to a charge for construction, each water-right application also includes a charge for land.

The act of June 13, 1949 (63 Stat. 172), which limited the Yuma Auxiliary project to 3,305 acres, also authorized delivery of water to the project through the facilities of the Gila project. The unit B irrigation and drainage district, encompassing the lands of the Yuma Auxiliary project, executed a contract on December 22, 1952, whereby an obligation of \$456,090 of Gila project costs was assumed for the district's share of Gila project capacity. In addition, an obligation of not to exceed \$510,000 was assumed for rehabilitation and improvement of the Yuma Auxiliary

project's irrigation works. Rate of repayment is dependent upon the acreage actually under water right. Works exclusively for the Yuma Auxiliary project include the B Main Canal and the distribution system. Water deliveries through the facilities of the Gila project began on July 6, 1953. The B-Lift pumping plant, which originally pumped water from the Yuma project works, has since been abandoned. The United States performs the operation and maintenance with funds advanced by the water users.

PUBLIC NOTICES AND CONTRACTS

- 1919, October 3: Sale of land and water right. Construction charge \$200 per acre; land charge approximately \$25 per acre, payable in 4 equal annual installments. By act of February 21, 1925, the purchase price of land and water rights was payable thereafter in 10 equal annual installments at 6 percent interest.
- 1951, January 29: Public notice regarding exchange of private lands for public lands. The act of June 13, 1949, Public Law 102, 81st Congress, limited the area of the Yuma Auxiliary project and allowed exchange of private land with water right outside limited boundaries of the project for public lands within the boundaries. The cost of water right also was reduced to not less than \$160.
- 1952, December 22: Contract 14-06-300-44 with unit B irrigation and drainage district. Established a maximum repayment obligation of \$966,090, including \$456,090 for a share of Gila project costs and \$510,000 for extension and betterment of Yuma Auxiliary project works. Obligation to be repaid in 120 equal semiannual installments, with installments dependent on acreage under water right. Contract provided for delivery of water to not to exceed 215 acres of nonproject lands through the works of the project. In accordance therewith, two Warren Act contracts covering a total of 100.7 acres were executed with the Yuma Mesa Grapefruit Co. and the University of Arizona on December 23, 1953, and January 1, 1954, respectively.

The summary of the status of repayment contracts as of June 30, 1957:

Item	Individual water rights		District contract	Total
	Construction	Lands, etc. ¹		
Total value of contracted repayment.....	² \$617, 466	\$510, 901	\$942, 803	\$2, 071, 170
Total matured charges.....	535, 319	379, 682	32, 376	947, 377
Total matured charges repaid.....	533, 079	373, 290	32, 376	938, 745
Total matured charges unpaid.....	2, 240	6, 392	-----	8, 632

¹ Includes purchase price of land, construction and land forfeitures, interest and penalties.

² Includes \$493 of funded interest on construction charges.

Miscellaneous water contracts.—The following miscellaneous water contracts have been executed on the Yuma Auxiliary project:

Organization	Date of contract	Type of contract	Contract period	Date of initial water deliveries	Rate of payment per acre-foot
University of Arizona.....	Jan. 1, 1954	Warren Act....	Indefinite.....	Jan. 4, 1954	Current acre-foot rate.
Yuma Mesa Grapefruit Co.	Dec. 23, 1953	do.....	do.....	Jan. 11, 1954	Do.

¹ Based on assumption that total of 3,305 acres will be under water right by the end of fiscal year 1958. Actual acreage under water right as of June 30, 1957, was 3,238.40.

² Includes reimbursable original Auxiliary construction costs of \$622,955, repayable by individuals, and \$966,090 repayable by district.
