Forest Products Utilization

Box 819, Macon, Georgia 31202

FOREWORD

This publication is a 1978 directory and a report on round timber processed in Georgia during calendar year 1977. It is intended as a marketing guide in bringing buyer and seller together where Georgia grown or manufactured forest products are involved. The utilization report is designed for foresters and others interested in the evaluation of timber production trends. The directory, which contains 1,290 listings, will be of benefit to persons or firms seeking to buy or sell specific items.

The directory and report includes companies which manufacture or process wood. Pulpwood yards and naval stores facilities are also included in order to make the listing more complete as a marketing aid.

Primary industries are those which use round timber, and 600 listings are in this section. Secondary industries are those using partially manufactured wood, such as lumber or plywood as raw material. Including naval stores, 690 companies are listed as secondary processors. Of the 690, 86 were classed as both primary and secondary due to the nature of their operations or products.

Classification of some plants is questionable because of varied products and raw materials. Therefore, omission of a firm is no reflection upon its activities, nor is inclusion a recommendation.

In 1972, Georgia had 24,839,000 acres classified as commercial forest land. This land is producing or capable of producing crops of industrial wood, and does not include 383,700 acres withdrawn from harvest by regulation or 30,200 acres of unproductive forest. The commercial forest area of 1936 was 21,334,600 acres, which increased to an estimated high of 26,298,000 acres in 1963.

Growing stock is defined as all trees 5 inches in diameter and larger of desirable or acceptable species and quality. Georgia's volume of these trees in 1972 was 14.8 billion cubic feet of softwoods and 10.6 billion cubic feet of hardwoods. The softwood portion was 94.5 percent southern yellow pine, followed by 4.2 percent cypress and 1.3 percent white pine, hemlock, and cedar combined. Oaks were 38.6 percent of the hardwood volume with other species groups being: 31.9 percent gum, 8.7 percent poplar, 6.4 percent hickory, 4.9 percent maple, and 9.5 percent assorted minor species.

Sawtimber inventory was 72,198.7 million board feet, which was 63.2 percent softwood and 36.8 percent hardwood. Loblolly pine had the largest volume of any species, accounting for 20,782.7 million board feet or 28.8 percent of all sawtimber. From 1936 to 1972, sawtimber volume increased by 36 percent.

Net annual growth of growing stock statewide was 1,577.2 million cubic feet, while removals accounted for only 1,017.8 million. Sawtimber growth exceeded removals by 41 percent.

^{1/} Georgia's Timber, 1972

INTRODUCTION TO UTILIZATION SECTION

In 1977, Georgia's wood-using industries processed 2.255 billion board feet of round timber excluding pulpwood. Of this volume, 84 percent was pine and 13 percent was oak, gum, and poplar. Cypress, hickory, maple, and several other minor species accounted for the remaining 3 percent.

Sawmills utilized 1.807 billion board feet or 80 percent of the total. Another 354 million board feet were used by the veneer and plywood industry. Treating plants processed 61 million board feet equivalent, mostly pine, and other roundwood processors accounted for 33 million board feet.

Production data are listed by forest survey units (Fig. 2) to show geographic distribution of industries and timber production. It can be compared to the previous industry surveys as well as to the Georgia Forest Survey data. ^{2/}

SAWMILLS

In early 1978, 241 Georgia sawmills were in operation. Fifty-six mills produced over 10,000 MBF each during 1977 and accounted for 77 percent of the year's lumber output. Nineteen mills produced over 30,000 MBF each and accounted for 45 percent of lumber production. Thirty percent of 1977 lumber was manufactured by 11 mills cutting over 40,000 MBF each.

VENEER AND PLYWOOD

Five southern pine plywood plants accounted for 70 percent of timber used by Georgia's veneer and plywood industry in 1977. The industry's 24 mills processed 354 million board feet, an increase of 42 percent over 1974.

TABLE 6.--TIMBER PROCESSED BY VENEER AND PLYWOOD INDUSTRY, 1977

Forest Survey Units	No. Mills	Total (MBF)	Yellow Pine	Cypress	Gum	Poplar	Oak	Hickory	Other Hdwds.

TREATING PLANTS

Wood treating plants reported production of 4.6 million fence posts and 61.3 million board feet of poles and piling in 23 locations during 1977. An additional 16 companies treated other products only.

The primary processors section of this directory lists only those treating poles, piling or posts. These are again listed under secondary processors along with the 16 other plants.

OTHER ROUND TIMBER PROCESSORS

In this category are 18 plants which processed 32.7 million board feet into products in 1977. These firms manufacture round timber into items which are not usually sold on a lumber measure basis. This includes 2 excelsior, 11 pallet, 1 handle, 1 cleat, 1 log home and 2 flooring mills.

TABLE 8.--TIMBER PROCESSED BY OTHER ROUND TIMBER USERS, 1977

PULP AND PAPER INDUSTRY

Listed in this directory are 267 yards and dealers actively engaging in buying, cutting, shipping, and otherwise processing wood for use in pulp and paper manufacture. Many of these ship directly from the forest to the pulp mill with no intermediate concentration yard. An additional 19 chip mills are also included in the directory.

RESIDUE DISPOSAL BY PRIMARY PROCESSORS 1/

The increasing cost of industrial fuel and raw material has made many wood residues more attractive as substitutes. The 1978 survey of wood-using industries indicated that 86 percent of all bark was being used in some form (Table 11). This includes bark that was shipped to pulp mills in dirty chips.

Coarse material such as slabs and edgings have been the most widely used residue for many years. Of the amount used in 1977, 93 percent went for fiber products. Less than 1 percent of the coarse residue in Unit I was unused, while 14 percent was not used in Unit V.

6/ Data compiled by Southeastern Forest Experiment Station, USFS.

7/ Includes bark from pulp mills.

USE OF THE DIRECTORY

Mills manufacturing round timber into products are listed in the primary processors section by county and type. It is the intent of this section to provide market information for persons or firms dealing in stumpage, poles, lumber, ties, etc. Major products are listed, but often minor items such as survey stakes or pallets are not.

Plants using lumber or other partially processed wood as a raw material are listed alphabetically by type and county in the secondary processors section. To locate a particular item, related plant types should be checked also. Several plant types such as pallets and wood treating have both primary and secondary listings. In such instances, both are included in the secondary processors section to make them easier to locate.

A county code sheet is included with the directory for county location. Employment size class for all listings and physical facilities and species abbreviations are as follows:

Employment Size Class

A = 1 - 10	D = 51 - 100
B = 11 - 20	E = 101 - 200
C = 21 - 50	F = Over 200

Facilities Code

1. Sawmill	4. Chipper
1C. Sawmill With Chip Canter	5. Dry Kiln
1H. Sawmill Using 30%+ Hardwood	6. Pressure Treating Cylinder
2. Planer	7. Treating Vat
3. Debarker	8. Veneer Lathe

Species Code

Cyprss	-	Cypress
Hic	-	Hickory
O Hdwd	-	Other Hardwoods
O Sftwd	-	Other Softwoods
S Hdwd	-	Soft Hardwoods
W Pine	-	White Pine
Y Pine	-	Yellow Pine
