## SUMMARY

Congress directed the National Park Service (NPS) to conduct a study, during the 1989 fiscal year, of certain public lands adjacent to Colorado National Monument. The principal focus of the study has been the Black Ridge Canyons Wilderness Study Areas (WSA) and environs immediately west of the monument, all or part of which various interests have long proposed be included in an expanded national monument or park.

The NPS planning process for conducting the study consisted of two phases, each of which has afforded ample opportunity for public involvement.

## RESOURCE SIGNIFICANCE

The first phase assessed the study area's natural, cultural and recreational resources and their potential to facilitate improved management and greater public enjoyment of the existing monument. On the basis of the assessment, it was determined that the study area possesses resource values of national significance that are not only fully compatible with the purposes, themes and visitor uses of the existing monument, but that are also deserving of the highest possible standards of long term protection. If the lands represented by Alternative 1, and even more so Alternative 2, were added to the monument, there would be strong justification for initiating action to change the status of the monument to that of national park.

*The Analysis of Significance* in the following pages offers a more detailed discussion of that determination.

## ALTERNATIVES

In the second phase of the study, the NPS identified, evaluated and compared a variety of possible boundary and management alternatives relating to the future administration of the study area. Two of the four alternatives contemplate the inclusion of lands and waters within the study area in an expanded national monument or park under NPS management, and the other two relate to continued management of the public lands in the study area by the Bureau of Land Management (BLM).

**Alternative 1** would expand the monument to include an additional 77,230 acres of land, more or less, that is generally bounded on the east by the existing monument, on the north by the south bank of the Colorado River, on the west by the Utah State Line and on the south by the north rims of the Little Dolores and Sieber Canyons and the north scarp of Black Ridge. Under Alternative 1, the expanded monument would total about 97,700 acres.

**Alternative 2** would expand the monument to include all of the lands identified in Alternative 1, plus a 21-mile section of the Colorado River and about 5,370 acres of land along its north bank from the Loma boat-launch area downstream to the State line.

Under Alternative 2, the expanded monument would total about 104,070 acres.

**Alternative 3** will continue BLM management of the study area under decisions of their Resource Management Plan (RMP). Three management options exist for the portion of the study area identified for wilderness consideration. That portion will be managed using direction from BLM's Wilderness Interim Management Policy, until Congress makes a decision on designation, at which time it will be managed either as wilderness or as recreation lands, depending upon the congressional decision. Because BLM's actual management under these various options would not materially differ, they are considered to be distinctive in name only and thus are treated here as a single alternative. Under Alternative 3, monument status and acreage would not be affected.

**Alternative 4** envisions a formal designation of an area, somewhat larger than the original study area, that is to remain under BLM management as either a National Conservation Area (NCA) or a National Recreation Area (NRA). As a practical matter, the differences between the NCA and NRA designations are largely nominal. Either one could also incorporate elements of any of the options identified under Alternative 3, using simple zoning to further assert a particular management preference for either consumptive or recreational use. Under Alternative 4, monument status and acreage would not be affected.

The *Alternative for Management, Management Comparison Matrix* and related maps in the following pages offer a more detailed discussion of the various alternatives and options considered in the study.

## **COMPROMISE PROPOSAL**

A Compromise Proposal, advanced by a variety of interest groups during the public involvement process, would, they hope, divide the study area -- perhaps between Rattlesnake and Mee Canyons -- to create both a new national park under NPS administration and a new national conservation area under BLM administration. Though precise boundaries have not as yet been defined, this proposal could serve to withdraw an additional 30,000 to 40,000 acres from the public domain for park purposes, resulting in an expanded monument or park of from 50,000 to 60,000 acres. Additional discussion of this proposal is included in the Public Involvement and Coordination section of this document.

## **FUTURE ACTIONS AND CONSIDERATIONS**

In view of congressional interest for the National Park Service to evaluate the feasibility of up-grading the status of the national monument to that of national park, it was determined that implementation of Alternative 1 or 2 would be the key to justifying such action, considering the degree of diversity in resources and opportunities for public enjoyment.

In general, the major steps involved in passing legislation to change a boundary of a

national park unit and/or modify its status would first require enough congressional interest to sponsor such a bill. Following the introduction of the bill to Congress and after extensive review and deliberation, it must pass the committees in both the House and Senate and then the full House and full Senate. Following this, the President of the United States may then sign the bill into law.

The extensive review process, which would take place at all levels of both the Senate and House, could involve public hearings in Washington, D.C., and in the vicinity of the lands being considered. Provisions to expand a boundary of a national park unit as well as change its status, may appear in the same legislation.

# **INTRODUCTION**

## **PURPOSE OF STUDY**

The NPS, in accordance with the House Conference Report (100-862, page 14) accompanying the Interior Appropriations Act (PL 100-446, 102 Stat. 1174) approved on September 27, 1988, was directed to conduct a study of lands adjacent to Colorado National Monument. Refer to Figure 1 for the location of the general area studied. The primary purpose of the study was to (1) assess the subject area to determine if it included significant natural, cultural, and recreational resources related to the purpose of the monument, (2) determine if the study area or portion thereof would fill a management or administrative need for resource protection and public use in relation to the existing monument, (3) evaluate existing and other alternatives for managing the resources determined to be significant, and (4) determine if Colorado NM would qualify for national park status should any or all of the study area be added to the existing monument.

## **COMPLIANCE**

This study has been determined to be among those actions designated as categorical exclusions, exempt from the requirements of the National Environmental Policy Act; therefore, a formal environmental assessment of the study of alternatives will not be required. This decision is based on the guidelines contained in 516 DM 6 Appendix 7.4 B(10), which covers the "Preparation of internal reports, plans, studies and other documents containing recommendations for action, which NPS develops preliminary to the process of preparing a specific service proposal or set of alternatives for decision."

## **STUDY AREA AND ZONE OF INFLUENCE**

As referenced in Figure 1, the area evaluated is located in west-central Colorado near the city of Grand Junction. It lies entirely within Mesa County and is a part of the Third Congressional District.

The area primarily includes those lands referred to as the Black Ridge Canyons WSAs situated between the Colorado/Utah State line and the west boundary of Colorado National Monument. On the north, the area withdrawn by BLM for protection of scenic river values of the Colorado River and a corridor approximately 1/2-mile wide either side of the river, are included. The Black Ridge, Sieber Canyon and Little Dolores River Canyon form the southern boundary of the area.

Several population centers are important in relation to the area studied. Grand Junction and neighboring communities in the Grand Valley area have an estimated population in excess of 80,000. Within a day's drive (350 mile radius) are three major metropolitan areas: the Colorado Front Range including Fort Collins, Denver, Colorado Springs, and

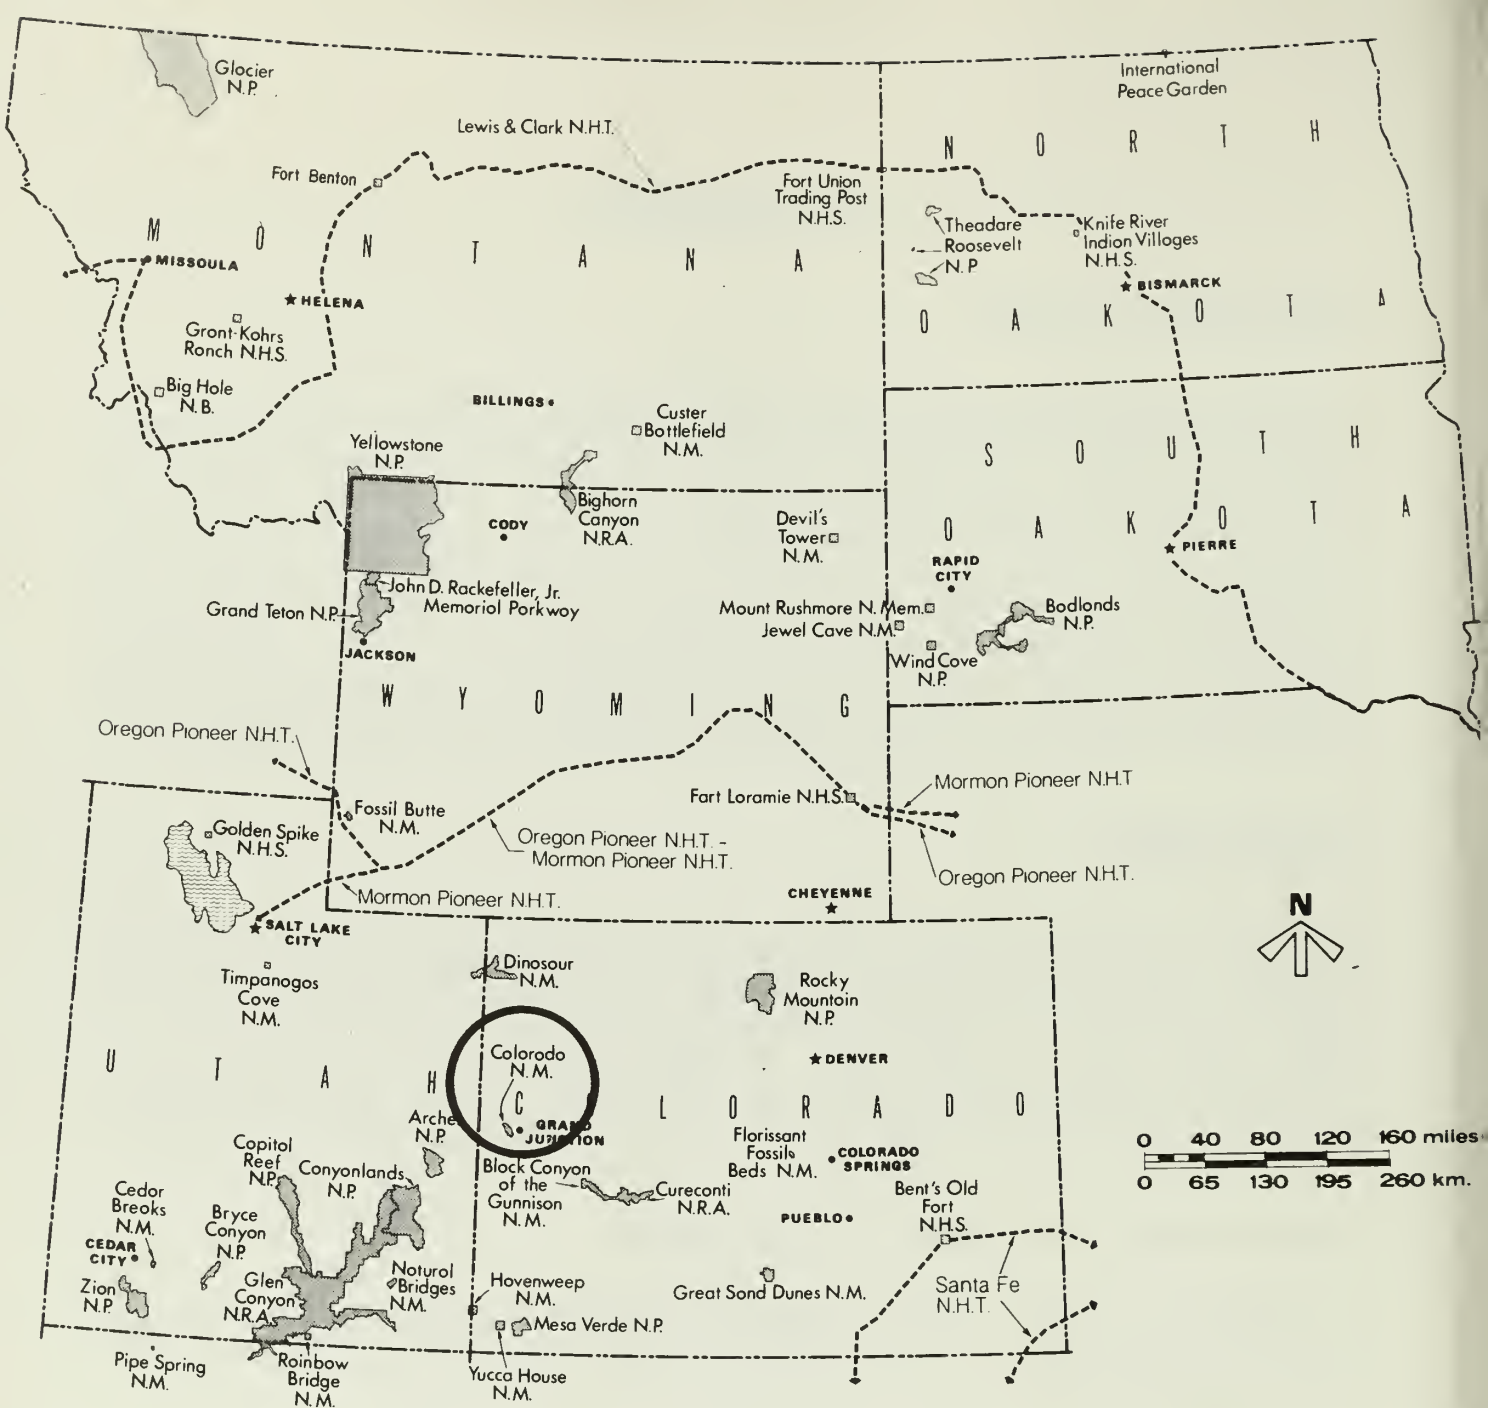

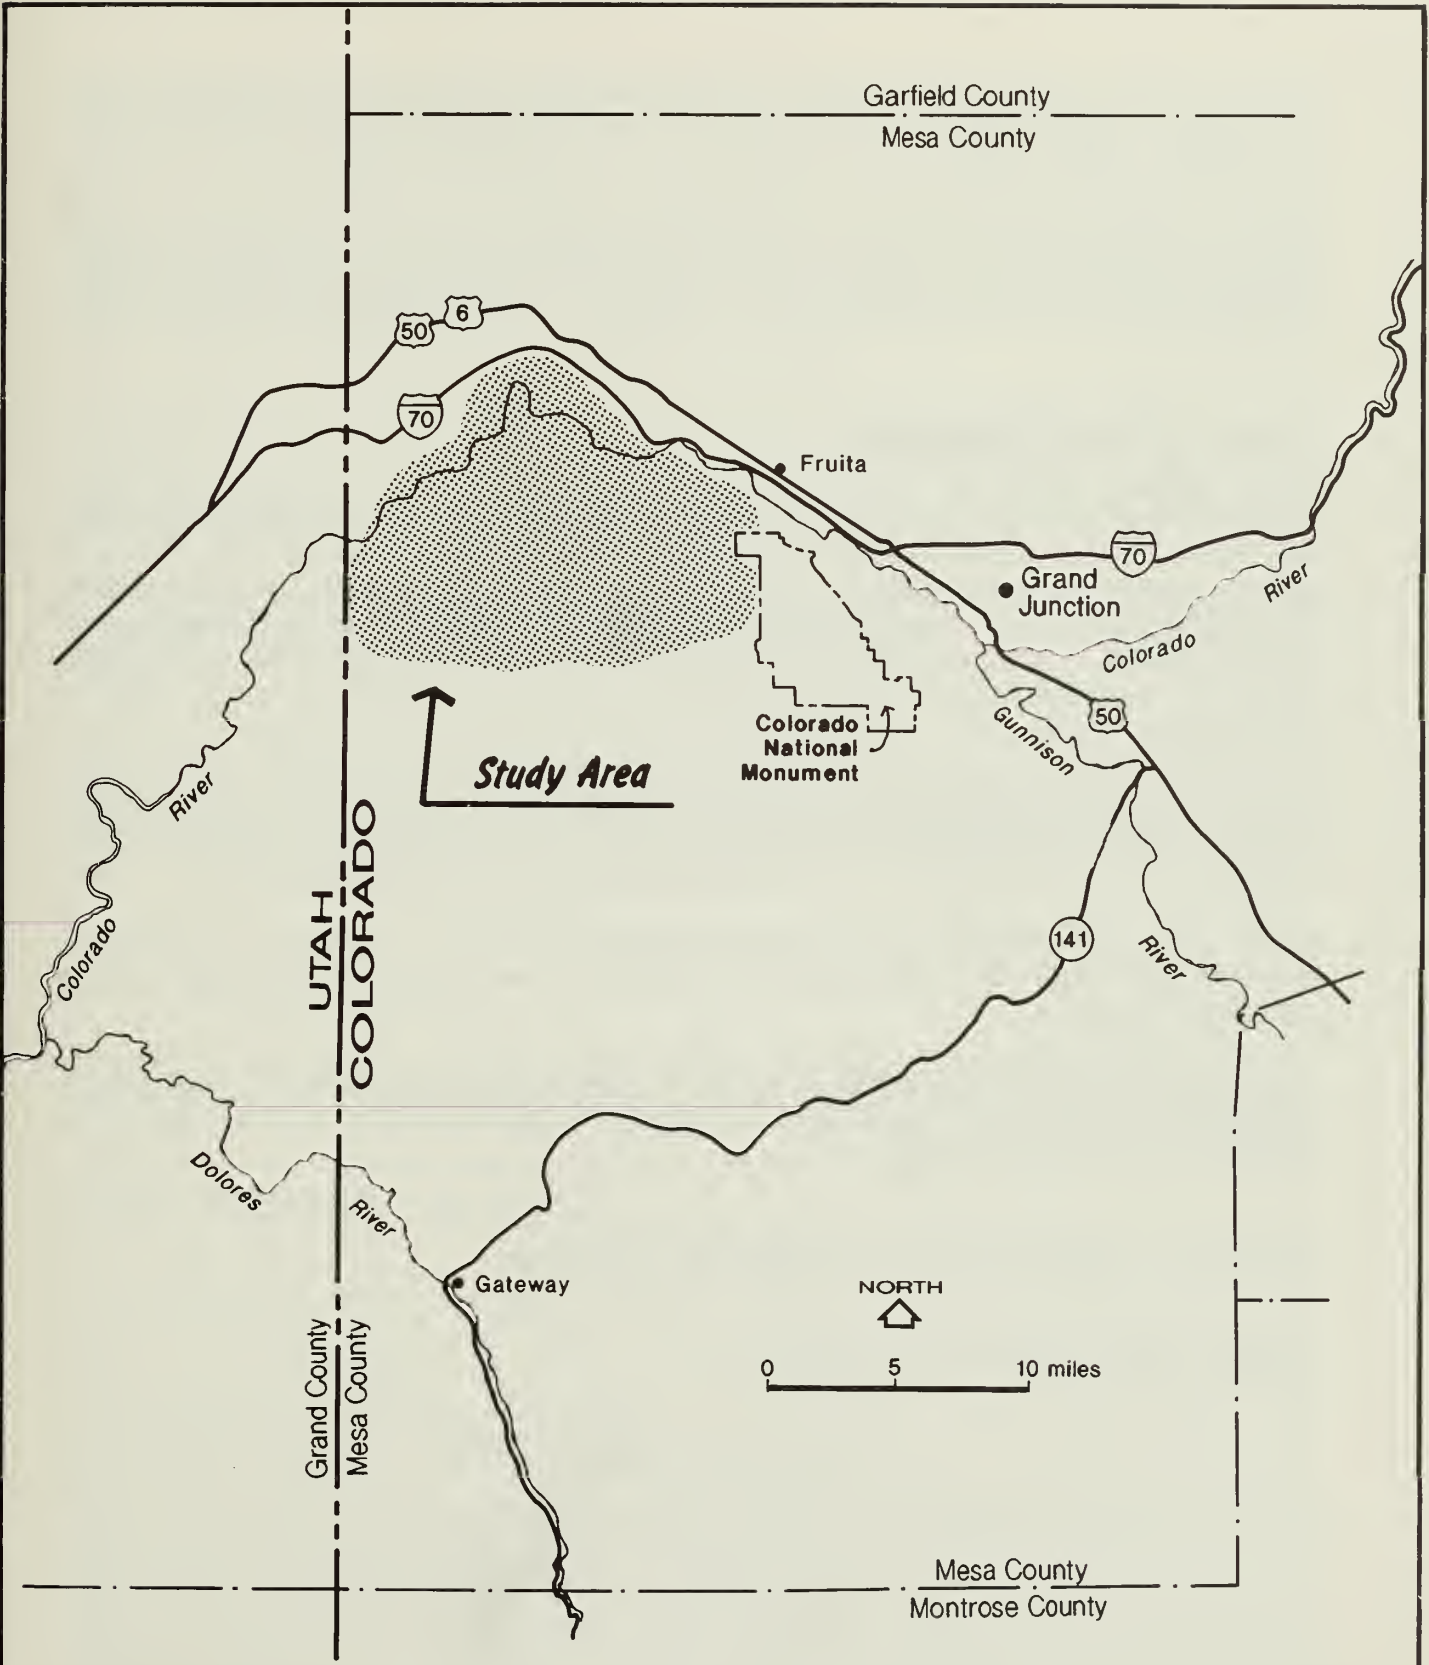

FIGURE 2

of the Interior

**Vicinity Map**  
**FIGURE I**

Pueblo; the Wasatch Front in Utah including Salt Lake City, Provo and Ogden; and the Santa Fe/Albuquerque area of New Mexico. The total population of these areas exceeds four million. Refer to Figure 2.

Access to the Grand Valley is excellent. The area is served by several airlines, Amtrak, and bus lines. The primary highways are Interstate 70 and U.S. 50. For more information concerning the socioeconomics, refer to Appendix A, *Socioeconomic and Visitor Use Assessment*.

## **RECREATION OVERVIEW**

National Park Service areas within approximately 100 miles include: Colorado NM, Arches NP, Black Canyon of the Gunnison NM, Canyonlands NP, Curecanti NRA, and Dinosaur NM. In addition there are portions of six National Forests (Grand Mesa, Gunnison, Manti-La Sal, San Juan, Uncompahgre, and White River), several million acres of Federal land administered by the Bureau of Land Management, several recreation areas managed by the States of Colorado and Utah, and numerous private or non-profit museums and other attractions.

Some of the more popular recreational activities in the region include: sightseeing, camping, hiking, boating, fishing, hunting, bicycling, and 4-wheeling. Opportunities to engage in these activities are abundant in western Colorado and eastern Utah.

Within the area evaluated, that portion identified by BLM as a WSA is managed in accordance with an Interim Management Policy (IMP), pending a final determination of its wilderness potential.

Recreational activities are permitted in the WSA as prescribed in the IMP. The use of mountain bikes and motor vehicles is permitted only on the existing access road to the Rattlesnake Canyon Trailhead.

For more detailed information concerning recreation use and visitation trends, refer to Appendix A, *Socioeconomic and Visitor Use Assessment*.

## **LAND OWNERSHIP AND USE**

The vast majority of land within the area evaluated is in Federal ownership and is managed by the BLM. The remaining land is privately owned. According to information furnished by BLM, which relates to their existing management, several parcels of private land have been identified for acquisition. Acquisition criteria specified in the Grand Junction Resource Management Plan (RMP) were used to identify specific parcels partially surrounded by the WSA and others along the Colorado River within the area considered eligible for "scenic" designation under the Wild and Scenic Rivers System. BLM has been actively pursuing acquisition of ten of these parcels. Acquisition of the other parcels is planned through exchange or purchase from willing owners as opportunities develop.

Use of the Federal lands within the WSA portion of the area evaluated must be consistent with BLM's Interim Management Policy for management of the WSA. Under this policy, uses of the area must not degrade the wilderness values. Activities such as off-road-vehicle and mountain bike use, cutting of firewood or Christmas trees, oil/gas and coal leasing, and mineral material disposal, are prohibited. Uses such as sightseeing, hiking, camping, grazing, and hunting are permitted. The area is presently open to mineral location (gold, silver, platinum and copper) and development of any valid post-FLPMA claims subject to non-degradation of wilderness values.

Private lands in the area evaluated are, for the most part, not developed. There are some exceptions such as gravel roads, a few small dams, private residences, and powerlines, and the Denver and Rio Grande Western Railroad situated north and adjacent to the Colorado River in the west half of the study area.

Adjacent federally owned and managed lands on the north, west and south are managed by the BLM with a mandate for multiple use. To the east, Colorado NM is managed by the NPS.

Along the Colorado River, south of the Loma boat launch and adjacent to the area evaluated, are several parcels of BLM and Bureau of Reclamation land. Through a special agreement, the Colorado Division of Wildlife is managing these parcels as a wildlife area. These lands were set aside and are currently being managed in an effort to mitigate impacts generated elsewhere on wetlands wildlife.

## **LAND USE PLANNING**

Within the area evaluated, all public lands have been and are managed by BLM. The area is managed under multiple-use principles, and since 1974, the historical management emphasis for the area has been recreation. Since this is a special recreation management area, those uses considered by BLM to be compatible with resource protection and recreation are allowed.

BLM's Management Framework Plan was completed in 1974 and in 1979, they began the wilderness inventory and study process. In March 1985, BLM released the draft *Grand Junction Resource Area Resource Management Plan and Environmental Impact Statement*. In January 1987, the *Grand Junction Resource Area Resource Management Plan and Record of Decision* was released. That document recommended wilderness designation for most of the land within the area evaluated.

In 1979, the Colorado River in this area was studied to determine suitability under the Wild and Scenic Rivers Act. The segment of river from Loma to the Colorado/Utah line was recommended for designation as "scenic" in the September 1979, *Wild and Scenic River Study Final Environmental Statement*. Lands within the National Scenic River Corridor, 1/4-mile on each side of the river, were withdrawn from mineral location. The BLM/Department of the Interior recently extended that withdrawal to continue protection of the corridor pending a congressional decision.

The BLM is continuing to investigate the possibility of a "National" designation for the study area as part of a much larger area (118,700 acres). The national designations being considered are National Conservation Area or National Recreation Area. The specific designation of NCA or NRA would require additional planning and extensive public involvement, followed by a recommendation from BLM and ultimately formal designation through congressional legislation.

Another ongoing, major land use planning effort within the region that must be recognized is that of the Grand Junction/Mesa County Riverfront Commission. The riverfront commission was formed in 1987 through a mandate by the Grand Junction City Council and Mesa County Commissioners to spearhead planning and development efforts that would encourage and provide for public access along the Colorado and Gunnison Rivers. This would be accomplished by providing extended trail systems, parks and greenbelts, and river launch/landing sites.

Planning and development efforts are well underway for that portion of the Colorado riverfront between Palisade and Fruita, Colorado, which includes Grand Junction. In the long term, this project will most likely significantly increase visitation to the monument and throughout the river corridor within the area evaluated in this study.

## **STUDY AREA RESOURCES**

### **NATURAL RESOURCES**

#### **Geology**

The area evaluated is located within the eastern margins of the Colorado Plateau, a physiographic province of some 150,000 square miles that is generally typified by gently dipping sedimentary rocks, high relief produced by deeply incised drainages, elevations above 5,000 feet and a semi-arid climate. Because soils are thin and vegetation is sparse in this dry region, infrequent episodes of brief but intense rainfall often yield massive surface water runoff. These, in concert with the more insidious chemical and mechanical effects of migrating groundwater, have eroded the nearly horizontal rock units of alternating hardness exposed in the province to create its characteristic stair-step topography.

Though the resulting erosional escarpments and benches are dominant landforms throughout the Colorado Plateau, other features often reflect the distinct influence of a local tectonic disturbance. Among these rather anomalous structures is the Uncompahgre Uplift, a long, linear bulge in the earth's crust upon whose northern tip the study area is also situated.

The Uncompahgre Uplift first asserted itself in late Paleozoic times, when the area was thrust upward to form a lofty range of mountains more than 100 miles long. Because elevated areas are more vulnerable to erosion, the ancient highland was vigorously attacked by the elements and soon reduced to a low plain, exposing, in the process, the heart of its crystalline Proterozoic core. By the late Triassic, about 200 million years ago, the exposed gneisses and schists were already being covered by stream deposits from a source to the east, and during the rest of the Mesozoic Era, and even later, the area received a thick blanket of terrestrial and marine sediments.

The Uncompahgre core and its burden of overlying sediments was elevated once again during the late Cenozoic Era, launching yet another cycle of rapid erosion that has continued up to the present time. An accumulation of deposits thousands of feet thick has thus far been removed, at last revealing the colorful sequence of Mesozoic sandstones and shales and the dark, somber Proterozoic rocks that are exposed in the study area today.

On the northern end of the Uncompahgre, the margins of the latest uplift are marked by a series of high-angle faults and pronounced monoclinal folds that attest to thousands of feet of vertical displacement. It is these features and their influence upon local patterns of erosion that distinguish the area evaluated from the rest of the Colorado Plateau.

Here, the headward erosion of numerous tributaries of the Colorado River has incised the elevated nose of the uplift with a network of deep, intricate and colorful canyons whose

labyrinthine depths are punctuated by towering sandstone spires, huge amphitheaters and soaring natural arches that differ morphologically from those at Arches National Park. And in the area evaluated, unlike that small part of the Uncompahgre Uplift already occupied by Colorado National Monument, the restless main stem of the Colorado River itself has cut into the nose of the uplift to expose even more dramatically the stratigraphic and structural features that give the area its unique flavor.

## **Minerals**

Based on studies conducted by the U.S. Bureau of Mines and the U.S. Geological Survey, the study area was found to contain subeconomic levels of dimension stone, sand, gravel and rock. The report also indicated there are varying degrees of potential for gold, silver, mercury, copper, chromium, nickel and cobalt. Geological and geothermal studies indicate a low potential for coal, oil, natural gas, carbon dioxide, and geothermal energy.

## **Soils**

Soils derived from rocks exposed in the area evaluated are generally thin, sandy and relatively permeable, but those that have weathered out of the Morrison Formation are noticeably expansive and carry a high selenium content. Because most do not retain moisture well, and because they are both somewhat alkaline and lacking in organic content, they support only sparse vegetation except where watered by springs and seeps or in gallery situations along stream courses where runoff collects and lingers. When not anchored by grasses or cryptogamic crusts, most local soils are vulnerable to wind erosion.

## **Paleontological Resources**

The Morrison Formation, which is perhaps best known for the dinosaur remains it has yielded, is exposed in numerous locations throughout the study area and surrounding region. It has been vigorously studied and exploited here since about 1900, when paleontologist Elmer Riggs began investigations not far from the existing monument that led to the initial discovery and typing of both *Brachiosaurus* and *Apatosaurus*. Other sites in the vicinity have recently yielded noteworthy specimens of *Stegosaurus* and lesser reptiles, and the area is also becoming known for its fossil remains of primitive mammals. Within the study area itself, virtually intact fossils of *Platanus* (Sycamore) flowers have been collected. At about 115 millions years of age, these are believed to be the oldest fossils of flower parts known to exist anywhere in the world.

## **Vegetation**

The distribution of plants in the area evaluated varies with soil type, the availability of moisture, slope and aspect, elevation, and fire and grazing history. Crowning the upland mesas and benches in most places is a pygmy forest of pinyon pine and Utah juniper, with pine dominating above 6,000 feet and juniper dominating below. The relatively sparse understory in the pinyon/juniper forest consists of native and introduced grasses, a variety of forbs, and scattered shrubs and xerophytes. Where recently opened by fire,

the pinyon/juniper forest is most often replaced by sagebrush, which in time is invaded by pine and juniper seedlings and re-forested. South-facing exposures in the canyons tend to be sheer, but north-facing slopes may support a mosaic of mountain mahogany, single-leaf ash, serviceberry, and fenderbush, punctuated by scattered specimens of pine and juniper. At higher elevations, dense thickets of gambel oak may crowd out most competing shrubs. Cottonwoods, willows, exotic tamarisk, and a variety of grasses and sedges populate the central washes and other areas where free moisture is present, while sagebrush and short grasses are more common on the adjacent terraces.

## Wildlife

The varied habitats within the study area are home to numerous species of animals. Though only limited numbers of mule deer are found there during the warmer months, a sizeable population uses the uplands and western canyons as winter range. So, too, does a small but growing band of elk that has begun to frequent the area in recent years. About one hundred head of desert bighorn sheep, the descendants of several bunches introduced as a cooperative venture in the late 1970s and early 1980s, also roam through the canyons and benchlands in the northeastern quadrant of the area evaluated. Other large animals that frequent the area include mountain lions and the occasional black bear. A host of lesser mammals -- mice, moles, ground squirrels and woodrats -- occupy every conceivable niche. These, in turn, support varying numbers of coyotes, bobcats, badgers, weasels and other creatures that prey upon them. Golden eagles, great horned owls and endangered peregrine falcons and bald eagles frequent the area each year, and scores of other bird species either make their homes there or pass through on migration. A variety of snakes and amphibians range from river level to the uplands, and the area is a meeting ground for numerous species of lizards that may interact nowhere else on earth. And finally, at least one race of butterfly (*Papilio indra minori*) has been recorded that is unique to the area. Other endangered species include the Colorado squaw fish and humpback chub. Another endangered species of fish, the bonytail chub, was captured in Ruby Canyon near Black Rocks in 1984.

## Air Quality

Areas that consistently violate minimum Federal standards because of man-caused activities are classified as nonattainment areas and plans must be implemented to reduce ambient levels below the maximum pollution standards.

To protect areas not classified as nonattainment areas, Congress has established a system for the prevention of significant deterioration (PSD) through the Clean Air Act Amendment of 1977. Under this act, areas are classified (Class I, II, or III) by the additional amounts of total suspended particulates (TSP) and sulfur dioxide degradation that would be allowed. Colorado has adopted the same requirements as contained in the Federal PSD program. Additionally the Colorado Clean Air Act provides for some additional areas to receive protection from SO<sub>2</sub> increases. These areas, formerly known as Category I areas, are protected by the same SO<sub>2</sub> increments as Federal Class I areas. Colorado National Monument is one of these areas.

Most of the region around the area evaluated has been designated a PSD Class II attainment area. An area including Grand Junction and a portion of the Grand Valley is the Mesa County designated nonattainment area for TSP. Colorado NM has been recommended for PSD Class I redesignation.

The WSA is managed as a PSD Class II area in accordance with BLM's Wilderness Management Policy (Federal Register Vol. 47, No. 23, February 3, 1982). Designating the WSA as wilderness or as a national park would not change the air quality designation from Class II. Only the State of Colorado has the authority to reclassify such areas.

The Grand Junction area is meeting both the Total Suspended Particulate standards and the PM10 standard. No violation of either standard has occurred in the last several years.

## **CULTURAL RESOURCES**

Data concerning the archeological and historic resources of the area evaluated were acquired from the Bureau of Land Management, Grand Junction Resource Area; the Office of the State Archeologist, Colorado State Historical Society; various manuscript reports and publications documenting archeological work on the Uncompahgre Plateau and vicinity; the *West Central Colorado Prehistoric Context*; and the Cultural Sites Inventory archeological data base for Colorado National Monument. The general archeological understanding for the west central part of the State, including the study area, is very broad and basic because of the limited amount of in-depth work that has been conducted. Only three archeological surveys of any magnitude (Grand River Institute 1987; Historical Museum and Institute of Western Colorado 1976; Stroh and Ewing 1964) have been conducted and no sites have received testing or evaluation for the National Register of Historic Places. Based on existing data, it is possible to discuss the contexts of area history in general stages, based on the recent summary prepared for the Colorado State Historical Society, *West Central Colorado, Prehistoric Context* (Reed 1984). These stages are reflected in the approximately 250 archeological and historic sites that have been documented in the general region.

### **Paleo-Indian Stage**

Peoples of the Paleo-Indian period, dating approximately 12,000 to 7,500 years ago (10000-5500 B.C.), were the first to inhabit the region. This stage represents an efficient and enduring adaptation to terminal Pleistocene environments, characterized by small groups exploiting regional resources in a migratory lifestyle. Utilization of Pleistocene megafauna, such as mammoth and giant bison, was an important part of seasonal activities, although undoubtedly acquisition of plant resources was an important part of life as well. Paleo-Indian material culture reflects the mobile, big-game hunting lifestyle with tool kits generally suited for animal killing and processing. Habitation structures are extremely rare, with none being reported from west central Colorado. Regional evidence of this big-game hunting tradition occurs as isolated projectile points or as isolated artifacts in later-dating archeological sites. Distinctive Clovis and Folsom Paleo-Indian

projectile points have been found near the general area evaluated ( Buckles 1971; Carpenter 1976; Gleichman et al. 1982), and Plano associated projectile points were found on the surface and collected by Stroh and Ewing (1963) during their survey of Colorado National Monument.

## **Archaic Stage**

As terminal Pleistocene environmental conditions were replaced by those more similar to today's environment, the big-game hunting tradition evolved into a lifeway that focused on plant collection and processing and on hunting a great variety of small fauna. This lifeway endured in west central Colorado from approximately 5500 B.C. to A.D. 500 where the resources appear to have been sufficient to support a relatively large population compared to both the Paleo-Indian and the subsequent Formative stages. A number of attempts (Reed 1984:24) have been made to subdivide the Archaic stage into a developmental sequence based on small changes in artifact styles and artifact frequencies. The most relevant is Buckles' (1971) study on the Uncompahgre Plateau. However, because of the extremely limited information from the area evaluated itself, it is most appropriate to say that the proposed expansion area is characterized by what has traditionally been called the Desert Archaic (Jennings and Norbeck 1955). This was one of the earliest designations to result from awareness that there is extreme areal variation within the Archaic, and it very appropriately describes the remains that have been documented.

Sixteen diagnostic Archaic sites have been identified within the area evaluated although the vast majority of the remaining sites are probably Archaic in age. Surface examination alone frequently fails to produce the rare diagnostic projectile styles or other materials that enable assignation of cultural affiliation. Archaic site types within the study area include both open and sheltered campsites (rockshelters), open and sheltered lithic scatters, and rock art. Evidence of habitation structures has not been found. A variety of stone, bone, antler, and plant remains have been recovered from Archaic sites in west central Colorado, although no ceramics are associated with this stage. The bow and arrow, traditionally believed to be a Formative period development, may have appeared during the very late Archaic in this region (Reed and Nickens 1980).

## **Formative Stage**

The Formative stage in west central Colorado is marked by the appearance of agriculture (probably horticulture in the area evaluated) and the resultant establishment of a sedentary or semi-sedentary lifeway. About the time of Christ, there was an important shift in the economy of the prehistoric inhabitants of the region that has been documented by scattered evidence of cultigens, masonry structures, and ceramics. Well-known traditions, such as the Anasazi in southwestern Colorado and the Fremont of Utah and northwestern Colorado, flourished in areas where there was the appropriate combination of reliable water and arable land. This became the focal point of an agriculture dependent sedentary life. However, the manifestations of this lifestyle in the area evaluated are inadequate to assign cultural affiliation, so are simply most appropriately called Formative. There is both Fremont-style and Anasazi-style rock art in the area along with masonry

remains that resemble no structure styles associated with either group. Ceramic styles of both Fremont and Anasazi tradition occur, but are generally considered trade wares because of their non-local manufacture. Consequently, the degree to which prehistoric peoples of west central Colorado conformed to a Formative lifeway is not well understood, although the stage is believed to date between A.D. 500 and 1200. Corn and possibly squash were utilized, but the small quantities found suggest that hunting and gathering remained the basic subsistence activity. Masonry surface structures and rockshelters were inhabited, and small villages suggesting a band level of organization have been recorded (Crane 1978). It may have been that the transition to Formative life was not as complete in west central Colorado as in other areas and that dependence on hunting and gathering plant materials continued to play a major role on the Uncompahgre and the adjacent region. This certainly is indicated by the nineteen identified Formative sites within the proposed expansion study area. These closely resemble the Archaic stage sites with only the addition of small, isolated masonry structures and ceramics. The sites generally occur in the canyons and at the mouths of the major drainages that drain the northern edge of the Uncompahgre Plateau--locations where both reliable water and arable land occur--and possibly were areas of seasonal horticultural activities. None of the substantial Formative period sites in west central Colorado are found near the area evaluated.

### **Proto-Historic/Historic Stage**

Following the disappearance of the Formative stage for reasons that remain unclear, a highly mobile, Archaic-style lifeway reappeared in west central Colorado with hunting and gathering again forming the subsistence base. This time period between A.D. 1200 and the appearance of what can definitely be called the Ute tradition is documented by only one site in west central Colorado (Reed 1984), which is located in the Ridgeway Reservoir project far south of the area evaluated.

The Ute are believed to have entered this region sometime between A.D. 1200 and 1400, based on linguistic and archeological evidence. However, the earliest firm evidence for Ute occupation of the area dates to the 1600s, based on a dendrochronological specimen from a brush structure near Durango (Dean 1969). The first Euro-American observation of the Utes was during the 1776 Dominguez-Escalante Expedition (Bolton 1972). The Ute lifeway was similar to the earlier-dating Desert Archaic with small bands hunting and gathering seasonally throughout a defined territory. Artifactual materials resemble the Archaic, and temporary brush structures and wickiups were used for shelter. The major material difference between the Desert Archaic and Ute was the latter's reliance on the bow and arrow and Ute use, if not manufacture, of pottery. Few Ute sites have been recorded in the region although wickiups and platform trees are known to exist within Colorado National Monument and the canyons of the Black Ridge area. By 1881 the Ute were expelled from west central Colorado.

### **Euro-American Stage**

The 1776 Dominguez-Escalante expedition heralded Euro-American movement into the area, although utilization became intense only after the 1850s gold rush. The area

evaluated contains 11 documented occurrences of dugouts, log cabin remains, corrals, inscriptions, sheds, trash scatters, line camps, and other archeological remains of short-term Historic period occupation.

### **Status of Cultural Resource Base**

It is unfortunate that little information exists about the prehistoric and historic resources of the subject area and the region in general. Because no sites have received detailed study or evaluation, there is insufficient information on which to base an evaluation of their significance. However, the area does have the potential to yield significant information and it should not be discounted as an important information base for future generations.

## **ANALYSIS OF SIGNIFICANCE**

### **EVALUATION CRITERIA**

The boundary study criteria contained in the National Park Service *Management Policies* (chapter 2:8) states that "The National Park Service will conduct studies of potential boundary adjustments and may recommend boundary revisions to include significant resources or opportunities for public enjoyment related to the purposes of the park, to address operational and management issues such as access and boundary identification by topographic or other natural features or roads, and to protect park resources critical to fulfilling the park's purposes. The latter two criteria are not applicable to this study since there was not a situation where there was a related issue. Primary justification for expanding the boundary would be to include significant resources and opportunities for public enjoyment related to the purpose of the park."

The "purpose" of Colorado NM is stated in Presidential Proclamation No. 1126 dated May 24, 1911, which established the area. This document states, "The extraordinary examples of erosion are of great scientific interest, and it appears that the public interest would be promoted by reserving these natural formations as a national monument, together with as much public land as may be necessary for the proper protection thereof." Therefore, the monument's purpose is preservation of "extraordinary examples of erosion" for "scientific" and "public interest."

Subsequent Proclamations and legislation relating to boundary expansions during the Hoover (1933) and Eisenhower (1952) years and later have tended to broaden the area's purpose to also include the protection and public enjoyment of all aspects of the monument's natural and human histories, its Rim Rock Drive and diverse other attractions, features and resource values.

The following resources and opportunities were determined to be significant in relationship to the purpose of the monument and of scientific and public interest.

### **NATURAL FEATURES**

#### **Arches**

Rattlesnake Canyon and environs contain an exceptional concentration of rock arches uncommon to the erosional features within the adjacent, existing monument. The morphology of these arches is also notably different from that of those in Arches National Park. Those in Arches NP are predominantly vertical features eroded through tabular, free-standing fins of sandstones that were created by stress-jointing of the earth's bedrock. In comparison, the predominantly horizontal arches adjacent to the monument are of the pothole variety, whose formation is dependent upon the dissolution of mineral cements by down-sweeping ground water. No major concentration of pothole arches is

currently represented in the National Park System and such features would be a significant and complementary addition to interpreting erosional processes that helped shape the northern portion of the Colorado Plateau.

### **Alcoves**

Over countless millennia, stream flows in upper Mee Canyon have carved an exceptionally large, undercut oxbow into the base of the Wingate Sandstone. This cave-like alcove, some 300 feet wide, 320 feet deep and 175 feet high, rivals some of the great natural amphitheaters along the main stem of the Colorado River that were forever drowned by the filling of Lake Powell in Glen Canyon. Such features are not represented in the existing monument and would complement its purpose.

### **Fossil Resource**

The study area is known to contain the fossilized remains of sycamore flowers (*Platanus*). These fossils are so superlative and rare in character that, to quote Dr. David Dilcher, professor of Paleo-botany at Indiana University, "This new evidence from Black Ridge requires that we revise our thinking about the history of flowering plants....There is no question that the discovery out on Black Ridge will produce a change in our understanding and interpretation of the fossil history of flowering plants."

The unique feature of this fossil that has yielded so much information is the three-dimensional and extremely fine detail captured in the fossil itself. These qualities are the result of an uncommon erosional condition whereby "very fine clay, which must have been mixed in with water carrying the sands, had settled inside and around the empty cavities of each seedhead." This condition resulted in a three-dimensional imprint of the seedhead. The preservation of this approximately 115-million-year-old plant and its eventual exposure is uniquely related to erosion, the process and force that created the monument and represents the purpose for its establishment.

### **Colorado River**

Colorado National Monument is currently isolated from the Colorado River, whose local presence and erosional influence are important, but now remote parts of the area's geological story. The addition of this resource would afford enhanced opportunities for direct interpretation of a closely related resource and its effects on the development of the monument's landforms.

## **OPPORTUNITIES FOR PUBLIC ENJOYMENT**

The various resources previously mentioned as well as the solitude, scenery and wilderness character associated with the various canyons and uplands of the Black Ridge area, collectively represent a superlative opportunity for public enjoyment. Such resources and opportunities would complement and coincide with the purpose for which the monument was established.

The Colorado River, like the primary roadway system through the national monument, has become one of the primary and more popular access routes to the resources of the Black Ridge Canyons area. The Colorado River, from the Loma boat launch site to the Colorado/Utah State line (20.7 miles) and beyond, was also determined to be eligible for inclusion in the National Wild and Scenic Rivers System. This has drawn more attention to the river resource and consequently increased visitation to the Black Ridge Canyons area.

## **CONCLUSION**

Based on the evaluation criteria and those significant resources and opportunities described above, it was determined that all of the lands described in Alternatives 1 and 2 would qualify for addition to the national monument.

Furthermore, if the lands involving Alternative 1, and even more so Alternative 2, were added to the monument, there would be strong justification for initiating action to change the status of the area to that of national park. This determination is based on the following values associated with the study area in combination with those of the existing national monument:

Nationally significant and diversified resources.

Exceptional and increased opportunities for interpretation of ecological components, geological and paleontological features.

Increased, superlative opportunity for recreation and scientific study.

High degree of integrity offered as a true, accurate, and relatively unspoiled example of a resource.

## **ALTERNATIVES FOR MANAGEMENT**

### **BASIS FOR FORMULATING ALTERNATIVES**

Considering the interest in the general area by the BLM and the NPS, and in view of the values the area offers in complementing existing Federal stewardships and management programs, alternatives for management were narrowed down to only those involving the two Federal Agencies. This rationale is further reinforced by the fact that both Agencies are represented locally with supporting infrastructure essential to properly and effectively administer the area. For the same reason, it was also determined there would be no real advantage in designating the lands as being under the administration of one Federal Agency, yet managed by the other. Furthermore, each Agency is currently managing similar resources nationwide.

The primary area of concern, as reflected in the legislative mandate to conduct this study, involved the Black Ridge Canyons Wilderness Study Areas. However, the alternatives as presented herein reflect the need for adjustments that affect other lands outside the primary area. These adjustments were determined to be essential, taking into consideration various management and administrative needs as well as the magnitude of the type of alternative being considered, such as BLM's NCA and NRA designations, which involve other lands within the region. Each alternative must be evaluated on its own merits. The matrix identified in Appendix B was designed primarily to give a quick overview of the management differences and potential tradeoffs associated with each alternative.

In alternatives where the boundary of the national monument is modified to include other lands, a determination was made that the added lands would be feasible to administer considering the size, configuration, ownership, cost, outside threats, and other factors that would possibly impact management and administration of the subject land. All evidence indicates that through normal actions such as signing, routine patrols, and interagency coordination, the alternatives, as presented, could be easily administered with minimal impacts on visitor use, staffing and funding levels for each Agency involved. For those alternatives involving expansion of the monument boundary, additional planning would be required to assure appropriate access, determine development needs, and provide effective information and orientation services.

In cases where the boundary of the national monument is expanded, it is also assumed that existing adjacent land uses will continue at the same levels and not represent a threat to the lands added to the monument.

### **ALTERNATIVES**

In the following presentation of alternatives, Alternatives 1 and 2 represent additions to Colorado NM. The justification and formulation of these two alternatives are based on the

rationale as presented in the previous section, *ANALYSIS OF SIGNIFICANCE*. Alternatives 3 and 4 represent management alternatives by BLM.

All of the Federal lands represented in the alternatives are currently being managed by BLM under the multiple-use concept. These lands are also components of the BLM proposed National Conservation Area or National Recreation Area, as represented by Alternative 4 in the boundary study. BLM currently has a number of plans in place, which prescribe details for the management of the area. Such information is available in the local BLM office in Grand Junction upon request.

## **ALTERNATIVE 1: DESCRIPTION**

This alternative provides for expanding the boundary of Colorado NM. The expansion would represent an increase of 77,230 acres including 3,700 acres of private land and approximately 13 acres owned by the town of Fruita, Colorado. The expansion would bring the total monument acreage to 97,700 acres. The expansion would basically include all of the lands east of the Utah State line to the west boundary of the Colorado NM and then south from the Colorado River to the north rim of Little Dolores River Canyon, Sieber Canyon and Black Ridge. This area would include major canyons such as Devils, Flume Creek, Pollock, Rattlesnake, Mee, Knowles and Jones as well as the other smaller canyons and mesa tops located between the major canyons.

### **Analysis of Alternative 1**

The NPS would manage all of the lands acquired. This alternative would significantly change the long term management concept of the area involved from one of multiple use to one based on preservation of natural and cultural resources. Unless specifically provided for by Congress through enabling legislation, the NPS would seek to eliminate uses inconsistent with the preservation of natural and cultural resources or those which would conflict with visitor use and enjoyment of the area. Based on the preservation concept, where such uses as grazing, hunting, mining and mineral developments, wood cutting, off-road-vehicle (ORV) use, etc. exist, they would be eliminated, most likely through a phaseout process. The Federal Government would be required to make just or fair compensation for all mineral or grazing rights acquired.

Considering the primitive character and scenic values recognized in the area, most likely development needs (i.e., roads, visitor and administrative facilities) would be very minimal and primitive in nature. At least initially, the existing visitor contact/administrative facility serving Colorado NM could easily serve the area involved in the expansion. Decisions, however, on the need, type, extent, and specific location of any supporting visitor or administrative facilities would be addressed in a General Management Plan/Development Concept Plan for the added lands. Such planning would commence only after the United States Congress authorized expansion of the monument boundaries. All Federal, State, and county Agencies as well as interested individuals and special interest groups would be encouraged to fully participate in the preparation of such planning documents.

Colorado NM is currently isolated from the Colorado River, whose local presence and erosional influence are important, but presently remote parts of the area's geological story. This alternative would permit adjustment of the monument boundaries to include extensive river frontage, thus affording enhanced opportunity for direct interpretation of a closely related resource and its effect on the development of the monument's landforms.

The scenic river corridor withdrawal associated with the alternative would continue to be managed with emphasis on protecting the scenic resources in view of the area's wilderness values and potential for being included in the National Wild and Scenic Rivers System.

Under NPS administration the private lands included in the alternative could be acquired through donation, exchange, or purchase. With regard to purchasing lands, the NPS, as a rule, would seek to acquire lands within its boundary based on a "willing seller - willing buyer" concept. The NPS is committed to overseeing efforts to ensure long-term protection of the resources as well as considering the interest of individual landowners within and adjacent to NPS administered lands.

The NPS would place a high priority on acquiring private lands within the boundary where use on such properties would pose a threat to resources or visitor use and enjoyment. Those of high priority would include lands that block or make visitor access unreasonably difficult or those which, if developed, would create dominant, negative visual impacts that would detract from the visitors' experience and the natural setting. In cases where scenic or access easements are possible, such options would be considered. Other private properties for which the NPS would give a high priority for acquisition would be those within the scenic river corridor where future changes in land use might impact scenic values. This concept would be consistent with the 1979 Wild and Scenic River Study which stated, "...private lands along the Colorado River...should be preserved in their present natural or pastoral state." Efforts would be made to accomplish this under current ownerships. The Federal Government would also be required to make just and fair compensation for all lands acquired. Acquisition of the private lands involved under this alternative would also have a minor impact on the county tax base.

The paleontological and archeological resources would be protected, preserved and developed for public enjoyment, interpretation, and scientific research in accordance with park management objectives and approved resource management plans. Research by the academic community would be encouraged and facilitated under the terms of research permits, providing institutions and individual researchers meet certain requirements as identified in the *NPS Management Policies*.

Although the sparse vegetation and precipitous terrain in the study area render it only marginally suited to livestock production, it is being grazed in accordance with multiple use practices. Alternative 1 would include some or all of the lands utilized for grazing in allotments 6123, 6125, 6130, 6135, 6136, 6138, 6141, 6142, 6143, 6154, and 6168. These parcels of public land -- totaling some 71,561 acres -- have been authorized to support 4,899 animal-unit-months (AUMs) annually. Average annual use has actually been only

2,388 AUMs, less than half the authorized amount. To exercise this privilege in 1988, four permittees paid \$1.86 per AUM or an aggregate of about \$4,500 in Federal grazing fees.

Alternative 1 also takes in approximately 27 small reservoirs, 12 miles of fencing, 1 well, 2 guzzlers, and 5 vegetative manipulation sites totaling approximately 1,000 acres. These improvements are primarily designed to facilitate livestock grazing operations, and, in some cases, improve wildlife habitat. In the belief that continued livestock utilization and its recurring support activities would pose a long-term threat to the area's natural and cultural resource values, every reasonable effort would be made under NPS management to equitably phase out grazing and to remove or obliterate any appurtenant fences, dams, and roads that do not conform with or satisfy other NPS management objectives.

The alternative will include most of the area identified as desert bighorn sheep range. Detailed management of the bighorn sheep would be discussed as part of a resource management plan that would be developed for this area. Management, for example, might include coordination with the Division of Wildlife to monitor the herd and as appropriate, to trap and relocate animals. Sport hunting would be prohibited unless specifically provided for through legislation.

Alternative 1 includes approximately 25,666 acres of mule deer habitat that has been identified as "Critical Deer Winter Range." This area is hunted to a limited extent during the regular season, when most deer are still occupying higher terrain. Infrequently in the past, when deer herd numbers have peaked, a special late-season hunt has been authorized to help regulate the deer population and its potential to damage agricultural values on neighboring private lands. The Colorado Division of Wildlife (DOW) currently compensates private landowners in such cases. According to information received from the DOW, it has been approximately ten years since the last herd build-up that necessitated a special late-season hunt. Factors that have helped control herd numbers since that special season include: two or three relatively severe winters and the issuance of a limited number of doe permits two of the last three years for an area west of Black Ridge.

Closure of the area to hunting could result in some increased wildlife damage to hay crops in the vicinity and might therefore increase the DOW's financial obligations, but the simultaneous cessation of predator control programs could help restore natural population control mechanisms and thus eventually offset, at least partially, any adverse impacts on agricultural values. As with bighorn sheep, the NPS would coordinate management efforts with the Colorado Division of Wildlife.

All planning, development and management-related activities will reflect consideration for the threatened and endangered species. Such actions will be coordinated with the U.S. Fish and Wildlife Service.

All mineral rights within the area under consideration in Alternative 1 are federally owned, excepting 565 acres of private land in seven parcels that range in size from 4 to 140 acres. Although the United States Geological Survey (USGS) has evaluated the area and considered its mineral potential to be low, it contains some 577 mining claims and,

excluding those lands within the scenic river corridor, remains open to mineral location under the current mining laws. There are no mineral leases in the area, and it is currently closed to mineral leasing and mineral material disposal. All Federal lands added to the monument under this alternative would be closed to future entry. Appropriate actions would be taken to examine existing claims for validity and to acquire those legitimate interests that might conflict with NPS management objectives or pose a continuing threat to other resource values.

As indicated in Figure 3, Alternative 1 would include a portion of the utility corridor located along the northwest boundary of the monument. A right-of-way grant was issued to Grand Valley Rural Power Lines, Inc., by BLM for a 12,420-volt overhead distribution powerline. This powerline is the only source of power to Glade Park residents and many communication facilities on Black Ridge. This alternative would honor the need for such services, but efforts would be made to minimize the potential impacts of the existing and planned upgrading of that service. Any recommendations to increase utility use or uses within the existing rights-of-way would be evaluated on a case-by-case basis.

Should the lands included in this alternative eventually be added to the monument and Congress initiate action to change the status of the monument to that of national park, there would be no difference in the manner in which the area would be managed. This is also basically true with regard to NPS lands established as wilderness. It should be noted that if Congress expands the boundary of Colorado National Monument as described in Alternatives 1 and 2, prior to designating wilderness as recommended by BLM, the NPS would reevaluate the area’s wilderness values, based on its criteria and management policies and make appropriate recommendations to Congress. The primary emphasis placed on lands designated as wilderness is to preserve the resources of an area in their natural condition. Lands designated as wilderness are generally more restrictive with regard to certain types of developments and uses. Appendix B provides further clarification on restrictions associated with lands designated as wilderness.

Preliminary estimates indicate Alternative 1 would require an annual funding increase of approximately \$25,700 in the budget for Colorado NM to administer those lands that would be added to the monument. These primary costs for administering the area would be subdivided as listed below. Secondary and long-term costs for management, such as for developing management plans, land acquisition, and involvement by other Agency offices within the NPS are not reflected in the cost estimate. It is also assumed that regardless of which Federal Agency ultimately administers the area, such costs would be similar and attributed to either Agency.

STAFF	
(1) Seasonal (April-October) GS-5 Ranger . . . . .	\$ 9,800
(1) Seasonal (April-October) WG-5 Maintenance Worker . . . . .	6,400
EQUIPMENT/OTHER	
(2) GSA 4x4 pickups . . . . .	\$ 4,500
Miscellaneous Costs . . . . .	5,000
Purchase/install 2 vault toilets at trailhead (one-time cost) . . . . .	2,000

Purchase raft and related equipment (one-time cost) . . . . .	2,500
Enhance radio system (one-time cost) . . . . .	10,000
Total estimate, one time costs . . . . .	\$14,500
Total estimate, annual costs . . . . .	\$25,700

This alternative does not represent significant impacts in terms of development, operation costs, or land acquisition. A small negative economic impact would result from eventually precluding hunting, grazing, and mining. An effective marketing program could generate an increase in tourism (and tourism expenditures) of 5 to 15 percent. Recreation visits to the monument totaled 374,735 in 1988 so each 1 percent increase is the equivalent of about 4,000 visits. Even an increase of 2.5 percent (as shown in the following table) would result in a net positive impact.

### Summary of Economic Impact

<u>Activity</u>	<u>Value</u>
Hunting loss	\$ -22,000
Grazing loss	-147,000 <sub>1</sub>
AUM fee loss	-4,500 <sub>2</sub>
Mining loss	-1,000
Recreation fee gain	+3,000 <sub>2</sub>
Tourism gain	+180,000 <sub>3</sub>
Net benefit	\$ +8,500

1. Value to rancher, not revenue to the Government
2. Revenue to Federal Government
3. Conservative 2.5 percent increase

This summary is based on a detailed assessment included in Appendix A.

## ALTERNATIVE 2: DESCRIPTION

This alternative also provides for expanding the boundary of Colorado NM. Alternative 2 would incorporate all of the lands discussed in Alternative 1, plus that area along the Colorado River that is being considered for designation under the Wild and Scenic Rivers Act. It includes a 21-mile section of the river and an associated strip of land that extends approximately 1/4-mile north of the river in a corridor from the Loma launch ramp downstream to the State line. The additions under this alternative would also include the Fruita Paleontological Site, an area of about 280 acres whose scientific value has warranted its designation as an Area of Critical Environmental Concern (ACEC). Alternative 2 would represent an addition of 83,600 acres to the monument, including 4,886 acres of private land bringing the total to 104,070 acres.

### Analysis of Alternative 2

This alternative would include those factors identified in the *Analysis of Alternative 1* plus the following:

The NPS would assume administrative control of the Colorado River and all of the public lands within the area north of the river that are being considered for inclusion in a designated scenic corridor. NPS Management of the river is deemed important, since the river is a significant recreational resource in its own right, and since a growing number of the recreationists entering the addition for such land-based pursuits as sightseeing, hiking and camping might also reasonably rely upon the river as a principal avenue of access. BLM estimates that 65 percent of the visitors to the lands identified in Alternative 1, use the river for access. Sole NPS proprietorship of the river, adjacent corridor and study area (as opposed to the dual administration envisioned under Alternative 1) would consolidate management under just one Agency and thus simplify efforts associated with visitor and resource protection, interpretation and provide adequate and consistent levels of visitor services.

Inclusion of the Colorado River in this alternative would eliminate waterfowl hunting beginning at the downstream corner of the DOW wildlife management area to the State line.

Due to the steep cliffs north of the river, which limit livestock access, only two grazing allotments (6612 and 6604) will be affected by this alternative. Approximately 3-4 percent of the AUMs in each of the allotments would be affected. (Refer to Appendix C.) These allotments also contain two fencing projects and one small reservoir designed primarily to facilitate livestock grazing operations. The lands adjacent to the river are critical to livestock grazing, considering the river is the primary source of water. As previously stated, unless specifically provided for by legislation, grazing would be ultimately phased out.

The alternative includes approximately 4,883 acres of private land. Approximately 727 acres of the private lands in this alternative have outstanding mineral interests.

This alternative would not affect the status of the existing Denver and Rio Grand Western Railroad right-of-way along the north bank of the Colorado River.

The scenic river corridor north of the river was also withdrawn from mineral location and there are no valid mining claims within the area. While the study area south of the river is closed to mineral leasing, the river corridor north of the river can be leased for oil and gas, but it would be subject to a no surface occupancy stipulation, which means that no development could occur in the corridor. In order to protect the Fruita Paleontological Site, it was withdrawn from mineral location by BLM.

The issue concerning water rights implications related to expanding the monument boundary to include the Colorado River are secondary in that the decision to embrace or reject such rights rests with elected representatives who introduce the enabling legislation that would address such rights (refer to Appendix D).

The same general management concept for managing the paleontological resources identified in Alternative 1 would also apply to the 280-acre Fruita Paleontological Site

included as a part of Alternative 2.

In summary, the socioeconomic impacts associated with this alternative would be the same as those associated with Alternative 1, with the exceptions of the administrative costs (outlined in the following paragraph) and grazing. An additional 40 AUMs to be excluded, representing a total value of \$1,200 to the ranchers. This would also represent an additional decrease of \$74.00 in revenue to the Federal Government as compared to Alternative 1. (Refer to Appendix A.)

Preliminary estimates indicate Alternative 2 would require an annual funding increase of approximately \$45,800 in the budget for Colorado NM to administer those lands that would be added to the monument. Such costs would be subdivided as follows:

#### STAFF

(1) Seasonal (April-October) GS-5 Ranger	\$9,800
(1) Seasonal (May-September) GS-5 Ranger	7,000
(1) Seasonal (April-October) WG-5 Maintenance Worker	10,700
(1) Seasonal (May-September) WG-5, part-time Mntnce Wrkr	4,300

Secondary and long-term costs for management, such as for developing management plans, land acquisition, and involvement by other Agency offices within the NPS are not reflected in the cost estimate. It is also assumed that regardless of which Federal Agency ultimately administers the area, such costs would be similar and attributed to either Agency.

#### EQUIPMENT/OTHER

(2) GSA 4x4 Pickups	6,500
Miscellaneous Costs	7,500
Purchase/install 4 vault toilets, 2 at trailhead and 2 at Loma boat launch (one-time cost)	4,000
Purchase raft and related equipment (one-time cost)	2,500
Enhance radio system (one-time cost)	10,000

Total estimate, one time costs	\$16,500
Total estimate, annual costs	\$45,800

This alternative does not represent significant impacts in terms of development, operation costs, or land acquisition. A small negative economic impact would result from eventually precluding hunting, grazing, and mining. An effective marketing program could generate an increase in tourism (and tourism expenditures) of 10 to 20 percent. Recreation visits to the monument totaled 374,735 in 1988, so each 1 percent increase is the equivalent of about 4,000 visits. Even an increase of 5 percent (as shown in the following table) would result in a net positive impact.

## Summary of Economic Impact

<u>Activity</u>	<u>Value</u>
Hunting loss	\$ -22,000
Grazing loss	-148,000 <sub>1</sub>
AUM fee loss	-4,600 <sub>2</sub>
Mining loss	-1,000
Recreation fee gain	+6,000 <sub>2</sub>
Tourism gain	<u>+360,000<sub>3</sub></u>
Net benefit	\$ +190,400

1. Value to rancher, not revenue to the Government
2. Revenue to Federal Government
3. Conservative 5 percent increase

This summary is based on a detailed assessment included in Appendix A.

### ALTERNATIVE 3: DESCRIPTION

This alternative provides for continued management of the Black Ridge Canyon's WSAs by the Bureau of Land Management. Approximately 68,700 acres of land are included. (Reference Figure 4.)

BLM identifies three basic options that might apply to future management of the study area under Alternative 3. These are: (A) continued management under Interim Management Policy, now in effect pending formal wilderness determination, (B) management, after congressional determination, as part of the National Wilderness Preservation System, and (C) management, after congressional determination, as non-wilderness recreation lands. Though nominally different, the three options are addressed as one alternative because they represent only subtle actual differences in management approach under BLM's multiple use guidelines. In one form or another, each option has already been considered in BLM's approved Resource Management Plan.

#### Analysis of Alternative

This section analyzes the three following options:

**Option A, Existing Management; Option B, Management as Wilderness; and Option C, Management as Recreation Lands.** Since management direction under Options B and C will not vary radically from Option A, Existing Management, only the differences are discussed for the latter two options. All other program management actions would remain the same as discussed under Option A.

**Option A, Existing Management.** The BLM would continue to manage all of the lands they currently administer. The central theme for managing the area described as the WSAs, Figure 4, is based on the concept that the scenery, natural, and other resources would be protected while being utilized to satisfy the broadest possible range of recreational use while continuing to permit certain consumptive uses under the multiple-

use management concept. For additional information on recreation use, refer to Appendices A and B.

The Federal Government owns all mineral rights within the area identified as WSA. There are no mineral leases in the WSA and the area has been classified as not prospectively valuable for oil, gas or coal. The area within the WSA is closed to mineral leasing and mineral material disposal (i.e., sand, gravel, moss rock, and building stone).

The WSA will remain open under the mining laws to mineral location (i.e., gold, silver, platinum, and copper). There are approximately 387 mining claims in the WSA that were filed after the Federal Land Policy and Management Act of 1976 (FLPMA). There are no existing claims with development rights that precede passage of FLPMA, nor are there any approved mining operations. BLM declared all claims with filing dates prior to FLPMA as invalid due to lack of assessment work.

As previously stated, the proposed national scenic river corridor was withdrawn from mineral location when legislation was passed in 1974. Recently, the withdrawal was extended by the BLM/Department of the Interior with a five year emergency withdrawal, which will protect the corridor pending a congressional decision. There are no valid claims within the area withdrawn.

For claims located after the passage of FLPMA, very restrictive development conditions exist because of possible wilderness impairment. Any work on these claims beyond casual use, which is use of non-mechanized equipment, such as taking hand samples, is not allowed without a plan of operations approved by the BLM. A plan of operations would only be approved if the actions proposed would not impair wilderness suitability. The only exception to this would be for the approximately 1,500 acres of non-WSA BLM lands not withdrawn from mineral entry in the study area. Development on these lands and other public lands outside the WSAs would be regulated by the 3809 regulations and would not be allowed if it would cause unnecessary or undue degradation of public lands.

Livestock grazing is allowed in WSAs as a grandfathered right. It is allowed to continue in the same manner and degree that was existing prior to passage of the FLPMA in 1976. This means that grazing in the WSA may continue as long as negative physical and aesthetic impacts resulting from the use do not increase. Refer to Appendix C for data on current grazing allotments. Any new project to support livestock grazing would be closely monitored to assure compliance with the general guidelines stated above. Recently BLM formalized agreements to protect resource values by closing approximately 20,000 acres to grazing. They also converted 23,000 acres from cattle or sheep to only cattle grazing as a precaution for protecting bighorn sheep.

There are several recorded paleontological sites in the WSA. Collecting is allowed only under BLM authorized permit. Permits for collecting are authorized only for scientific reasons. BLM requires a clearance prior to authorization of any activity that could impact fossil resources.

All of the WSA, which excludes the utility corridor on the east side, will continue to be

managed as a Visual Resource Management Class I area. The river corridor north of the river and WSA will continue to be managed as a VRM Class II area. The standards set by these classifications will continue to be applied to any future activities or projects considered for the WSA.

Air quality of the WSA and river corridor would continue to be managed under the Clean Air Act Amendment of 1977 as Class II for prevention of significant deterioration standards.

Eventual acquisition of most private lands within the Ruby Canyon River corridor and bordering the WSA would be in the interest of the public and the land management agency and are suitable for exchange. Most landowners involved have been in contact with BLM concerning the potential mutually beneficial land exchanges or acquisition with Land and Water Conservation funds. Several land and tenure adjustments are being negotiated at this time.

Funds have been appropriated and negotiations are under way to acquire private land adjacent to the Loma boat launch. Negotiations are under way to acquire high resource value shoreline in Ruby Canyon. BLM plans to acquire all private land in Ruby Canyon from willing landowners. These acquisitions are viewed by BLM as essential to long-term management and protection of the study area.

Watershed restoration would be considered only where deteriorated soil and hydrologic conditions threaten life, property, or wilderness values, and where natural recovery would be unlikely. Water structures would be maintained if it is determined they are in the interest of the general public or if they serve a valid existing right, such as livestock grazing. Only actions or projects that maintain or enhance water quality, consistent with the protection of wilderness values, would be considered.

Harvesting of firewood or other woodland products, either commercial or private, would not be allowed in the WSA or river corridor. Tree cutting would only be allowed in fire emergencies or for insect or disease control.

Under wilderness IMP, a wide variety of wildlife-related activities and projects may be allowed as long as they satisfy non-impairment criteria.

Hunting, fishing, and trapping would be permitted by the BLM consistent with Colorado State game laws.

As requested by the Colorado DOW, approximately 25,666 acres of the WSA have been designated as critical deer winter habitat (winter concentration area). The critical deer winter habitat also extends south on BLM lands outside of the WSA. Presently, there is an ongoing study designed to deal with a critical deer wintering problem involving deer concentrations, primarily in the west end of the study area and just west of the study area across the Utah border. Once the results of ongoing studies are known, BLM would work with wildlife officials on hunts, consistent with not impairing the WSA.

All planning, development, and management-related actions will reflect consideration for threatened and endangered species. Such actions will be coordinated with the U.S. Fish and Wildlife Service.

The BLM would continue to work with the Colorado Division of Wildlife for management of the desert bighorn sheep and their habitat and permit hunting of the species.

BLM excluded from the WSA a utility corridor situated between the east boundary of the WSA and the west boundary of Colorado NM. The powerline was in place when the wilderness inventory was done and would remain.

Actions taken to improve access, including construction and maintenance of trailheads and trails would continue.

No target shooting zones would be established on several areas in and adjacent to the WSA for protection purposes. This would include areas such as the Rattlesnake Canyon Arches area and Loma boat launch site, which would remain open to hunting.

Public information on the resources associated with the river and WSA would continue to be provided by both BLM, NPS, and other information centers.

This alternative would not have an economic impact on current uses within the area (i.e., grazing, hunting, etc.). An effective marketing program could increase visitor use over and above the 5 percent increase already estimated for the area. Visits to the area in 1988 were conservatively estimated at 21,500; therefore a 5 percent increase is equivalent to about 1,100 visits. These increases would result in an economic benefit to the region.

**Option B, Management as Wilderness.** Since existing management of the WSA is directed by strict wilderness interim management guidelines designed to protect the WSAs until Congress makes its decision, management as wilderness after designation would change little from present management. There would be the permanence of status and manageable boundaries and perhaps additional funding to go along with the designation, but individual resource program decisions would remain the same, for the most part.

As designated wilderness, the area would be closed to mineral location. As indicated under Option A, there are no valid pre-FLPMA claims or any approved mining operations in the area evaluated. Prior to approving plans for operations on post-FLPMA claims, the BLM would conduct an examination of claims to verify whether a valid claim exists. The validity examination would involve the same procedures as listed under *Option A, Existing Management*.

Prior to approving plans for operations on post-FLPMA claims, the BLM would conduct an examination of claims to verify whether a valid claim exists. The validity examination would consider whether administrative procedures were properly followed by the claimant, whether the minerals claimed are actually there, and whether the minerals, if present, can be mined at a profit.

In the event a claimant is determined to have a valid mining claim and the claim was filed prior to the wilderness area being included in the Wilderness Preservation System and withdrawn from mineral location, the BLM would have to be satisfied of the following before approving a plan of operations for mining.

There would be no unnecessary or undue degradation of wilderness character. Mechanical or motorized equipment, including helicopter and fixed-wing aircraft (beyond casual use) would be used, only if there were no reasonable alternative.

The reclamation measures included in the plan of operations would be adequate to provide for restoration as near as practicable of the surface of the land disturbed.

The wilderness would be permanently closed to mineral leasing, which would mean oil/gas and coal. Also, the study area would be permanently closed to mineral materials sales and free-use permits.

The wilderness would be closed to consideration of new utilities. The utility corridor between the Colorado NM and the wilderness would be expanded to 1/4 mile. The BLM would allow maintenance of the Grand Valley Rural Electric Association powerline within the corridor, consistent with protecting the amenities of the area. Because this is the only utility corridor to provide additional service needs in the Glade Park area, BLM will allow new utilities to be constructed within the corridor, subject to the strict Class II visual requirements for the corridor.

This alternative would not have an economic impact on current uses within the area (i.e., grazing, hunting, etc.). Should Congress designate wilderness, such action would draw attention to the area. An effective marketing program could increase visitor use over and above the 5 percent increase already estimated for the area. Visits to the area in 1988 were conservatively estimated at 21,500; therefore a 5 percent increase is equivalent to about 1,100 visits. These increases would result in an economic benefit to the region.

**Option C, Management as Recreation Lands.** As indicated earlier, if Congress decides not to designate the lands within the WSA as wilderness, protective management would remain very close to existing management. The recommended wilderness would be identified as the Black Ridge Recreation Lands, which is a BLM administrative designation, and managed to preserve and enhance recreation values. Changes from existing management are described below.

The BLM would petition the Secretary of the Interior to withdraw those lands recommended for wilderness designation from mineral location. Strict conditions would apply to development of existing mining claims. A BLM approved plan of operations would be required before development would be allowed. BLM would have to be satisfied that a valid claim exists, with minerals present that can be mined at a profit before approving such a plan. If mining occurred, the BLM would allow it providing unnecessary degradation of public lands did not occur.

The lands designated as recreation lands would also be closed to mineral leasing, except

for a half-mile buffer around the edges, which could be leased for oil and gas, subject to a no surface occupancy stipulation. The recreation lands would remain closed to mineral material sales.

As with Option B, Wilderness, the 1/4-mile utility corridor on the east side of the area recommended for wilderness designation would be authorized, with the remainder identified as unsuitable for public utilities.

Without the wilderness designation or IMP, vehicles would be allowed on designated roads and trails. Some roads closed to protect wilderness values could be opened, such as the BS Road and the Colorado Ridge Road, scheduled to be closed in the future.

This alternative would not have an economic impact on current uses within the area (i.e., grazing, hunting, etc.). An effective marketing program could increase visitor use over and above the 5 percent increase already estimated for the area. Visits to the area in 1988 were conservatively estimated at 21,500; therefore a 5 percent increase is equivalent to about 1,100 visits. These increases would result in an economic benefit to the region.

## **ALTERNATIVE 4: DESCRIPTION**

Given the resources and uses within and adjacent to the study area, this alternative would provide the opportunity to identify and place a national designation on a much larger area either as a National Conservation Area or National Recreation Area. These designations would represent a broader umbrella under which the options described in Alternative 3 could fit without changing their intent.

The NCA or NRA designations are essentially a change in name only and management actions under both would coincide with the way BLM is currently managing the study area. These designations would not affect future emphasis that might be placed on the study area as wilderness or wild and scenic river. Congress could designate a wild and scenic river and/or wilderness area which would be an integral part of an NCA or NRA.

Since the management of the study area would remain the same under NCA or NRA designation and neither would change any of the management options as described in Alternative 3, this alternative basically represents an independent step designed to place "National" emphasis on the WSA and adjacent lands. The exact designation of an NRA or NCA would be determined by a plan or recommendation from BLM and the actual establishment of either would require congressional action. However, for the purpose of this study, BLM identified in Figure 4, what they felt would qualify as an NCA. The management decisions which would govern programs under the designation as an NCA are already in place as a result of the RMP/EIS.

Since the geographic area of the NCA, as identified in Figure 4, would be the same for an NRA, the following analysis describes the general public land resource framework, which includes the WSA and forms the basis for establishing an NCA.

## Analysis of Alternative

Figure 4 identifies the boundary in Colorado for a logical NCA. According to BLM, it is logical to expect that the NCA would also include BLM lands in Utah, should it become a reality. The proposed NCA in Colorado would contain an estimated 118,700 acres of BLM land, 13 acres belonging to the town of Fruita, Colorado, and 9,000 acres of private land. This NCA is consistent with the way BLM presently views management, in that program decisions and resource uses are inter-related and not fragmented by a particular program emphasis area or particular designation. The NCA is rather solidly blocked BLM land with negotiations presently under way to acquire many of the private inholdings from willing landowners.

The NCA would include sites that are known to paleontologists not only on a national basis, but also international basis. Examples of known sites under intensive management either directly by BLM or through agreement with the Museum of Western Colorado, include: Rabbit Valley Research Natural Area, Stegosaurus, Split Rock, Fruita Paleontological Research Natural Area, Dinosaur Hill, Black Ridge Angiosperm. The NCA would include archeological sites that span the entire spectrum of occupation, 10,000 B.C. until Native Americans were moved from the area. Both McDonald Creek and the Little Dolores drainage have been identified in the RMP for active cultural resource management.

The unique recreation, scenic, and biological resources identified in the prior alternatives would be included with the NCA.

The Colorado River with all of its obvious amenities and recreational outlets, would be an integral part of the NCA.

Rabbit Valley is important as an area open to motorized vehicles on roads and trails, to organized equestrian events, to individual activities, and as a group-event area.

The recently developed Kokopelli's Mountain Bike Trail is receiving national attention, and is expected over time to grow in reputation.

The entire NCA provides a broad spectrum of recreational uses for individuals having diverse interests. It would draw local people as well as people from outside of the region.

In summary, BLM lands in the NCA are completely covered by management decisions derived from the RMP/EIS and individual program activity or site development plans. The NCA would remain in multiple-use and retain the existing management decisions. The BLM would submit an NCA plan prepared with public review, to the Congress which would set the unique values to be protected by legislation. National designation would allow for more attention and recognition to be given to the NCA resources and a special designation would be placed on all BLM maps to distinguish it from other BLM lands. The WSA would be a part of the NCA, either under Existing Management, Management as Wilderness, or Management as Recreation Lands.

This alternative would not have an economic impact on current uses within the area (i.e., grazing, hunting, etc.). Should Congress designate an NCA, such action would draw attention to the area. Additional attention would result if Congress also designates wilderness, as described in Alternative 3(B). An effective marketing program could further increase visitor use and result in economic benefits to the region.

**National Recreation Area.** As previously stated, since the geographical area for an NRA is identical to the NCA and all program uses and decisions the same, the NCA discussion also applies to an NRA. The emphasis may slightly differ over time due to the different label.

## **PUBLIC INVOLVEMENT AND COORDINATION**

### **GENERAL OVERVIEW**

During January 1989, the National Park Service prepared and completed a review of the draft task directive for conducting this study. The Bureau of Land Management assisted the NPS in formulating and reviewing the task directive for accomplishing the study. The task directive was approved in February 1989.

During the week of January 23, 1989, public meetings were conducted in Fruita, Montrose, Grand Junction, Delta, and Glade Park, Colorado, to explain the study process and hear public comments and concerns relative to the project and study area. In preparation for these meetings, over 1,400 brochures were distributed to potential interested individuals, special interest groups and various Federal, State, and local Agencies. News releases were distributed to over 200 media outlets. The BLM also assisted the NPS in developing a mailing list of potentially interested individuals. A total of approximately 225 people attended the January public meetings. In July 1989, the NPS published a newsletter informing the public of the status of the studies.

On October 6, 1989, over 800 copies of the draft report were distributed to everyone who expressed an interest in the planning process. The study documents were transmitted under cover letter, which also announced the dates for a series of public involvement meetings to be conducted in November and the deadline for responding with review comments. News releases announcing the availability of the document and scheduled public meetings were also provided to various news media. These releases also identified the deadline for comments.

Thirty-nine days following distribution of the draft boundary study, the first of four public meetings was conducted. Meetings were conducted in Glade Park, Fruita, Grand Junction, and Denver, Colorado, on November 14, 15, 16 and 20 respectively. The primary purpose of these meetings was to explain the results of the study and respond to public questions and concerns. A total of approximately 271 people attended the four public meetings, in which 66 comments were recorded. As of December 1, 1989, a total of 111 written comments were received, some of which contained more than one signature. The public comment period terminated on November 24, 1989; however, all comments that were received by December 1, 1989, were incorporated into the evaluation of the public response.

Following the close of the public review period, the NPS began evaluating comments. This also involved a meeting with BLM, during which each of that Agency's comments was reviewed and discussed. Appropriate revisions were then incorporated into this final document. At the public meetings most of the support voiced was for continued management by the BLM. The opposite was true of the written comments, with the majority supporting NPS management.

## SUMMARY OF COMMENTS

This section represents a consolidated general summary of the comments received as a result of the January 1989, and November 1989 public meetings. Generally the comments and public statements fell into 4 categories, which included (1) continued BLM management under the multiple-use concept, (2) management by the NPS and changing status of monument to national park, (3) compromise alternative that divides management of the area between NPS and BLM, and (4) other comments. The four categories are discussed in more detail below.

### Continued BLM Management

The majority of those who expressed an interest in BLM continuing to manage the study area did not identify a preference in terms of Alternative 3 or 4. The general feeling conveyed by those in this category was to continue management under the multiple-use concept, with emphasis on protecting natural resources and minimizing restrictions on public access and use of the area.

The primary individuals and groups represented by this category included those whose interest and concerns centered around maximum use by all interested, cattle grazing, and hunting for recreation and wildlife population control purposes. The general comments offered as justification for continued BLM management were as follows:

Continued BLM management would have the least economic impact on cattle grazing operations considering the amount of land that would remain open to grazing.

Under BLM management the desert bighorn sheep could continue to be managed and promoted for hunting purposes. Management actions could also be initiated to manipulate the herd in an effort to control numbers and minimize "die-off" due to diseases.

The multiple-use concept will permit the greatest diversity of uses by the general public (i.e., grazing, hunting, 4-wheel-drive vehicles, trail bikes, target shooting, unleashed dogs, etc.).

There were some who simply preferred BLM management because the NPS could not at this time be more specific and detailed on management and development than was presented in the studies, especially in Appendix B. The NPS indicated that detailed management and development plans could not be prepared until the lands were actually transferred to the NPS for management and that the public would then be involved in the planning process to prepare such plans.

Continued BLM management would be the least restrictive in terms of natural resource development opportunities.

There was a fear expressed that fees would be imposed to use the lands under NPS

administration.

Some expressed that BLM offers the greatest opportunity for use by off-road and 4-wheel-drive vehicles.

There was a fear expressed of potential loss/modification/or unknown alternatives required of existing utilities under NPS administration.

The Colorado River, which is of crucial importance to waterfowl hunters should remain under BLM administration.

Under NPS management, hunting would be discontinued and certain negative socioeconomic impacts would result. These would include revenues generated by those hunters who would no longer hunt in the region and payments by the State Division of Wildlife to private landowners who might incur game damage due to overpopulated herds.

There was speculation that under NPS management access and facilities would be improved (i.e., paved roads, major campground developments, etc.), which would increase vandalism, trash, and congestion, and would detract from the wilderness character of the area.

There was also an opinion that if the NPS boundary was expanded, a two-mile buffer zone would be automatically established outside the new boundary, in which no hunting or ORV use could occur.

Some expressed support for BLM management as a National Conservation Area, providing that enabling legislation included language designed to provide specific statutory protection for specific values and subordinate other multiple uses to the protection of those values.

## **Management by the NPS and changing status of monument to national park**

The majority of those who expressed an interest in expanding the monument in relation to Alternative 1 and 2 did not actually express a preference for either alternative. However, the majority of those who fell into this category did express the desire to see legislation introduced to change the status of the monument to national park.

The general rationale for supporting this alternative included the following:

Because the resources have been determined to be nationally significant, they should be given the highest form of long-term protection possible. The NPS has a long-term tradition of preservation-oriented management that fully prepares it to properly manage the area. It is the most capable based on experience and complementing policy.

The NPS has been the most successful of the Federal Agencies in obtaining funds

and completing research necessary to properly protect significant resources, which is an essential component in achieving management objectives. Traditionally BLM has been less effective in this area.

The NPS historically provides for routine ranger patrols to monitor and correct environmentally damaging activities, provide visitor information and education services and conduct scientific research to guide in management decisions.

Certain uses, such as grazing, which would be eliminated under NPS management yet permitted under the multiple-use concept of management could have long-term cumulative impacts on soils, vegetation, archeological sites, and other resources. To constantly monitor and manage for such impacts will be costly.

Expanding the monument to include the Black Ridge Wilderness Study Area would greatly enhance the scenic, wilderness, wildlife and recreational values of an area that is already noted nationally as a national monument. The expansion into the Black Ridge Wilderness Study Area would justify a change in the monument's status to national park, increasing its notoriety and potential to draw greater numbers of visitors and thereby increase economic benefits.

Considering the increasing popularity of the area as a national attraction for sightseeing, hiking and camping, etc., and BLM's and the DOW's effort to promote the area for hunting purposes, it appears that there is an ever-increasing potential for serious conflicts related to visitor safety.

### **Compromise Proposal**

In response to the draft report, a number of civic organizations and elected bodies announced at the second series of public meetings their preference for, and endorsement of, a compromise that they hope would create both an expanded national park under NPS administration and a new national conservation area under BLM administration. Among those supporting this concept were the Grand Junction Area Chamber of Commerce, the Mesa County Commissioners, the Fruita Chamber of Commerce, the Fruita City Council, the Mesa County Planning Department, the Grand Junction City Council and the Concerned Citizens Resource Alliance.

Precise recommendations vary somewhat from group to group, but generally call for a partitioning of the study area somewhere along the Colorado Ridge divide between Rattlesnake and Mee Canyons, with 30,000 to 40,000 acres of land to the north and east coming under NPS administration, and the lands to the south and west remaining under BLM administration.

Depending upon where the actual boundaries are drawn, the NPS would gain administrative control over a number of major drainages, including Rattlesnake Canyon and its collection of natural rock arches, over several miles of frontage on the Colorado River, and perhaps over the large alcove in Mee Canyon and some of the more important fossil-bearing exposures on Black Ridge. The BLM would retain much of the acreage

now utilized for grazing and the Agency's cooperative holistic management experiments, and hunting would continue to be permitted on those lands considered to be most susceptible to over-populations of mule deer.

Based upon the public interest in this initiative, it would appear that a compromise proposal, with some refinement, could be a workable and widely accepted alternative. The NPS also feels that a sufficient quality and diversity of resource values would be represented in the enlarged NPS management unit to warrant its consideration for National Park status.

If further action on this proposal were mandated by the Secretary of Interior or by Congress, the NPS would recommend that, as a first step, the NPS and BLM meet to negotiate the specific boundaries necessary for the most effective management of those lands each Agency would eventually administer.

### **Other Comments**

The NPS received comments from the Grand Junction District BLM office - many of which are represented in the various categories above. Some of the other comments received from BLM dealt with issues concerning consistency and level of analysis, range of NPS alternatives, method of dealing with public comment in the scoping sessions, interpretation of data provided by BLM to conduct study, full presentation of BLM management of key study area resources, economic analysis requirements, and specific comments concerning changes in text. The NPS met with the BLM and discussed these comments and made revisions where appropriate.

The NPS was asked if it would be possible to just change the national monument status to national park, without any additional resources being added. To be able to simply change the status of an area without justification and for the sake of giving it "greater status" would jeopardize the credibility of the concept for recommending status. Furthermore, such action and flexibility would in itself degrade the very meaning and importance of status and negate any benefit derived from changing to national park status.

An area that qualifies for national park status represents an area that contains a multitude of resources, all of which have been determined to be nationally significant. These various resources are individually identified in the enabling legislation. Colorado National Monument was established and designated as a monument in view of its erosional features. Although subsequent proclamations have expanded the area's purpose, in the opinion of the NPS, the existing national monument does not contain the diversity of nationally significant resources essential for justifying national park status.

Finally, a number of comments received addressed matters considered to be beyond the scope of the study and are not referenced in this document. All comments received however, will be retained on file as a record of public involvement.

## APPENDIX A: SOCIOECONOMIC AND VISITOR USE ASSESSMENT

**Social setting.** Social values and lifestyles within the planning area are characteristic of rural counties in western Colorado. Lifestyles are primarily rural and a high value is placed on independence, open space, and outdoor recreational opportunities. Thus, the resources managed by the Federal Government are of interest to much of the population.

Many residents value the rural character of the area as an important part of their lifestyles. An appreciation for the wide-open spaces, natural values, solitude and personal freedom is widespread. Many residents resent control of land or any kind of outside interference. Government participation in projects is generally solicited only when problems cannot be solved locally.

**Population.** The Grand Valley has long been the transportation, communications and service center for western Colorado and eastern Utah. Mesa County is consequently the most populous in western Colorado and will likely remain so. About 90 percent of the county population lives in the Grand Valley between Palisade and Loma. Population per square mile of private land is similar to that of counties in the Denver suburban area.

<b>Population</b>		
<u>Area</u>	<u>1983 Population</u>	<u>1970-1983 Change</u>
Fruita	3,079	69 percent
Grand Junction	30,693	52 percent
Rest of Mesa County	54,172	67 percent
 Mesa County	 87,944	 62 percent

Source: Bureau of Economic Analysis

**Population growth.** Until the 1970s, population growth lagged behind the State average. After 1970, however, the rate of growth increased, averaging just under 7 percent a year between 1977 and 1980. Most of the increase was due to immigration brought about by the development of energy minerals. Population growth came to an abrupt halt in 1982 with the closure of several large oil shale projects and a slowdown in development of other energy resources.

The magnitude of future population growth is highly dependent on the degree to which western Colorado energy fuel resources are developed. Without significant energy development, growth is expected to be less than 1 percent annually. Active energy development might result in an annual growth rate in excess of 2 percent, a rate similar to that of the early 1970s.

**Employment.** In 1982, 42,301 people were employed in Mesa County jobs. Employment in three sectors - retail trade, services, and government - makes up almost 60 percent of Mesa County's total wage and salary employment, reflecting the county's role as western Colorado's trade and service center. The local economy is more diversified than those of other western Colorado counties.

### 1982 Employment by Sector

<u>Sector</u>	<u>Mesa</u>
Farm	2 percent
Agricultural Services	1 percent
Mining	6 percent
Construction	9 percent
Manufacturing	7 percent
Transportation & Utilities	7 percent
Wholesale Trade	5 percent
Retail Trade	22 percent
Finance & Real Estate	4 percent
Services	21 percent
Government	16 percent

Source: Bureau of Economic Analysis

Mesa County employment increased 34 percent between 1977 and 1983. The majority of this increase occurred in the retail and services sectors. Unemployment has tended to parallel State levels. A sharp upturn in late 1982 was the direct result of the slowdown in energy development activities.

The size and complexity of Mesa County's economy reflects its role as a supplier of goods, services, and labor to a large part of western Colorado and eastern Utah. Because it relies on activity over such an extensive area, the economy is less sensitive to management changes on nearby Federal lands. None of the alternatives considered in this plan will have a measurable impact.

**Coal, Oil, and Gas.** There are presently two coal mines operating in Mesa County. Each mine employs about twenty people. Sizeable tracts of Federal coal have been leased in the area during the last decade but development has been slowed due to the lack of demand.

In 1980, the oil and gas industry directly employed over 1,500 people. Subsequent declines in oil and gas production resulted in substantial layoffs and business closures.

BLM classifies the study area as *not* prospectively valuable for oil/gas or coal. No mineral leases exist in the study area and it is closed to future leases.

**Other minerals.** The study area is closed to mineral material disposal, typically classified as saleable minerals. Examples of this category are sand and gravel, moss rock, and building stone.

Most of the study area is still open under mining laws to mineral location. This involves minerals such as gold, silver, platinum, and copper, which are classified as locatable minerals. There are approximately 577 mining claims associated with Alternative 1. The lands added as a result of Alternative 2 are within the scenic river corridor, which is free of any claims. A one-half mile strip along the river corridor has been withdrawn from mineral location pending a decision on designation as a National Scenic River. None of the mining claims is in this area.

BLM requires an approved plan of operations (with very restrictive development conditions) prior to any mechanized work on a claim. This approval process should prevent any action that would impair wilderness suitability. This restriction does not apply to the 1,500 acres outside the WSA. BLM proposes to withdraw the entire study area from mineral location to provide long-term resource protection for recreational values.

**Agriculture.** Although agriculture still exerts a strong influence on the character of the region, employment and income data emphasize the diminished economic role of agriculture. Farm labor makes up only 2 percent of the total work force. Farm proprietors' income has become an erratic and declining contributor to area personal income, averaging less than 1 percent of the total over the years 1977 to 1981.

Most of the study area is utilized for livestock grazing. Elimination of this grazing would have only a very small effect on the local economy. Due to declines over the last decade, livestock production has ceased to be a major economic factor. In 1980, about 1.5 percent of the county's total employment and less than 1 percent of the county's total income were tied to livestock production.

However, a few individual ranchers could be significantly affected by reduction of their allotments. Four livestock operations depend upon forage from the study area. While the forage supplied by this grazing is only a portion of that used by the ranching operations, most of the forage is used during the winter and spring, which can usually only be replaced by expensive feeding operations and is usually critical to the success of a ranching operation. All four ranchers indicate that without the forage supplied from the

study area, their operations would experience a severe negative impact.

The four livestock operations are allowed a maximum of approximately 4,899 AUMs within the study area. At \$30 per AUM this represents a total value to these ranches of \$146,970. The *actual* use in recent years has been approximately 2,388 AUMs. At the present charge (\$1.86 per AUM) the Federal Government realizes an average revenue of \$4,442 per year from the grazing. By way of contrast, in 1988, Colorado NM generated \$112,118 in Federal recreation fee revenue.

Strictly speaking, the above grazing impacts apply to Alternative 1. Alternative 2 would have a slightly greater impact (\$1,200) due to the inclusion of an additional 40 AUMs. This would also represent a decrease of \$74.00 in Federal Government grazing fees as compared to Alternative 1.

**Forestry.** Mills in the area produce about 10 million board feet of lumber annually, but only small amounts of that currently come from BLM lands and none from the study area. The primary product from these woodlands is firewood. Within the study area, BLM prohibits harvesting for any private or commercial purpose. Tree cutting is only allowed for fire emergencies or for control of insects and disease.

**Income.** Per capita income for Mesa County in 1981 was estimated at \$9,821, slightly less than the Colorado State average of \$10,033. The cost of living in the Grand Junction area is slightly less than that of most American cities.

**Tourism.** Public use of the study area is related to two basic geographic features: the uplands and canyons of Black Ridge, and Ruby Canyon on the Colorado River. The uplands and canyons of Black Ridge are managed as Wilderness Study Areas.

**River use.** The Colorado River corridor from the Loma boat launch to the Utah State line is generally known as Ruby Canyon and is considered flatwater (Class I). Immediately downstream in Utah is Westwater Canyon, which contains major whitewater rapids (Class III+). About 65 percent of access into the study area is via boating on the Colorado River. This provides camping and hiking access from the mouths of several canyon systems.

Most of the use of Ruby Canyon is by non-motorized floatboat users. About 75 percent of the floating is done in inflatable rafts with the rest distributed between canoes and kayaks. About half of the floatboat users continue on through Westwater Canyon, making typically a two or three day boat trip involving shoreline camping and hiking.

Approximately 40 percent of the floatboat use is conducted by 23 commercial river outfitters under Special Recreation Permits issued by BLM. Almost all of these trips continue on through Westwater Canyon. The remaining 60 percent of floatboat use is by private boaters, typically in smaller groups. In most years, the majority of floatboating occurs in April through October.

BLM plans to continue their attempt at informal campsite use rationing in Ruby Canyon.

No use restrictions have been implemented but a permit system may be necessary in the future to allocate and/or ration use.

BLM is currently working to expand the capacity of the Loma boat launch. This expansion is viewed as a key to proper management of river use and use of surrounding areas.

About 5 percent of the river use is by motorboats, primarily hunters (waterfowl and deer). Motorboats are also used in the spring and fall for catfish fishing.

### 1988 Recreation Visits

Colorado National Monument (TOTAL)	374,735
Black Ridge study area (TOTAL)	21,500 (conservative estimate)
day hiking	5,000
backpacking	500
mountain biking	1,200
off-highway vehicle (to arches)	1,700
floatboat users	6,000
motorboat users	1,000
shoreline camping (by boaters)	4,500
fishing (mostly? by boaters)	500
deer hunting (partly by boaters)	400
waterfowl hunting (partly boaters)	700

Much of the study area use (especially floatboating) is by visitors from outside the region. This results in some overnight stays in the adjacent communities and in Colorado National Monument.

**Vehicular use.** The study area has been designated a WSA and vehicle traffic has been restricted to a few designated roads. BLM plans to continue this restriction regardless of possible wilderness designation.

Approximately 1,700 motorized users and 1,200 mountain bike users came in 1988. Both types of use appear to be increasing at least 5 percent per year. About 35 percent of access is by motor vehicle, usually high-clearance four-wheel-drive. Most of this use is to gain access for hiking to the arches in Rattlesnake Canyon, but other significant uses include mountain biking, deer hunting, and hiking in other canyon systems such as Knowles and Mee canyons. BLM plans to close some existing roads in Ruby Canyon.

There is a noticeable urban influence zone and correspondingly higher level of public use in the Devils, Flume, and Pollock Canyon area, which is accessible by two-wheel-drive vehicle virtually year-round. In the winter, mud and snow results in the remainder of the study area being impassable to motor vehicles.

**Hunting.** Two hunting outfitters have Special Recreation Permits to operate in Ruby

Canyon. The entire study area is open for hunting (primarily waterfowl and deer). 1,100 hunters used the area in 1988. Target shooting is allowed throughout the area but restrictions will be imposed at the Rattlesnake Canyon arches and at the Loma boat launch.

Since virtually all of these hunters are local residents, their average daily expenditure while hunting is probably quite low. If they spent \$20 per day, expenditures attributable to the study area would total \$22,000.

**Visitation projections.** BLM has increased visitation to the study area through public information and a long-term effort to advertise the entire area through the press. There may be potential to increase visitation a little more through increased highway signing and by providing information to national monument visitors. Distribution of BLM's planned Black Ridge trail map will also increase visitation somewhat.

BLM estimated that most categories of visitation are increasing by at least 5 percent per year. Off-highway vehicle use has decreased as a result of recent closures inside the WSAs. However, use of all-terrain vehicles and mountain bikes is increasing at a rate greater than 5 percent annually. This growth may soon slow since such use is now restricted to the road providing access into the Rattlesnake Canyon arches.

Deer hunting use has leveled off and is not projected to increase. Hunting of Bighorn Sheep is projected to increase in the future but will always remain very low.

The most optimistic reasonable increase for the Black Ridge area would be doubling of visitation between 1988 to 1998. While this would represent a large percentage increase, the actual increase in visitors (21,500) would be equivalent to less than 6 percent of existing 1988 recreation visitation (374,735) to the national monument. The greatest potential for increased visitation will result from lands presently included within the monument. The fact that recreation visits at the monument increased 34 percent from 279,492 in 1983 to 374,375 in 1988 underscores this potential. Total visits, recreation and nonrecreation, increased from 795,180 in 1983 to 920,898 in 1988.

None of the alternatives would automatically result in an increase in tourism, and in the absence of vigorous promotion, simply changing the designation of a unit from monument to park status might have no measurable effect on visitation. On the other hand, tourism can be expected to increase in response to active marketing efforts, and indeed, an expanded monument or park envisioned by Alternatives 1 or 2 would directly and strongly appeal to two of the three marketing groups specifically targeted by the Colorado State Tourism Board -- the market that prefers a touring vacation experience (families with children, senior citizens and others interested in sightseeing, attending cultural events, visiting historic sites, etc.) and the market that prefers outdoor vacation experiences (usually young, well-educated singles and families who prefer participation in camping, white-water rafting, cycling, hiking, riding, etc.). Only those seeking an up-scale resort vacation experience (ski area, dude ranch, or golf or tennis resort) would not be specifically attracted to the expanded monument or park discussed in Alternatives 1 and 2, though they might visit enroute to their primary destinations. The success of any

tourism promotion would depend upon the energy put into it and upon the quality and diversity of attractions to be marketed. Considering the increased name recognition associated with a change in status from monument to park, the new mix of land and water-based recreational opportunities afforded by the addition of the WSA and river corridor and the fact that recreational visits at the monument increased 34 percent from 1983 to 1988, an effective marketing program could realistically stimulate a 5 to 20 percent increase in tourism and related revenues.

Every increase of one percent in recreational visitation to the monument is equivalent to about 4,000 visitors. If each additional visitor, and particularly those of nonlocal origin, were to spend an average of only \$18 in Grand Junction and environs, the immediate economic benefit of each percent of increased visitation would amount to some \$72,000 per year, for a total of from \$360,000 to \$1,440,000 annually based on the modest 5 to 20 percent projection noted above. Each percent increase would also generate an additional \$1,200 in Federal recreation fee revenues. According to a 1986 survey, fully 45 percent of the monument's summertime visitor entries at Colorado NM reflected an out-of-State origin, and another 25 percent hailed from Colorado's front-range communities.

## **APPENDIX B**

### **ALTERNATIVES MATRIX**

The primary purpose of this appendix is to give a general overview of the management differences and tradeoffs associated with the alternatives considered for managing the resources determined to be nationally significant. To accomplish this, the following Alternatives Matrix is provided.

ALTER. <sup>*1</sup>	DESCRIPTION OF A	DIFFERENCES	
			MINERALS LEASABLE/SALABLE/LOCATABLE
1 (NPS)	Provides for expanding the boundary of the lands east of the Utah State line of COLM and then south from the Cañon rim of Little Dolores River Canyon, San Juan Ridge. *2, *3		Closed to all mineral entry. Valid existing rights are honored, existing claims (577) judged invalid are extinguished. Wilderness recommendations are subject to all mineral interests being relinquished, acquired, exchanged or otherwise being eliminated in the near future.
2 (NPS)	Provides for expanding the boundary of the lands in Alternative 1 plus the area to protect the scenic values of the Utah State line east to the Loma border includes the Fruita Paleontological		Same as Alternative 1.
3 (BLM)	Option A, Existing Management, (BLM) Includes those lands identified by BLM. BLM will continue to manage the area under the Interim Management Policy and under wilderness review (IMP). *3		Closed to all mineral leasing. Open to mineral location. Restrictive development conditions exist because of possible wilderness impairment. Closed to mineral material disposal (sand and gravel, building stone, etc.).
	Option B, Wilderness Includes those lands identified by BLM. If designated as wilderness by Congress, BLM managed by BLM in accordance with the 1964 and the Resource Management		Same as Alternative 1, except approximately 387 claims would be involved.
	Option C, Recreation Lands Includes those lands recommended for designation. If Congress decides on Wilderness, the area will be identified as Black Ridge Recreation Lands by the	ing. A identified at and	The area will be closed to mineral leasing except for a half mile buffer around the edge, which could be leased for oil and gas, subject to a no surface occupancy stipulation. BLM will petition the Secretary of the Interior for a withdrawal from mineral location and strict conditions will apply to development of existing mining claims. The area will not be open to mineral material disposal.
4 (BLM)	National Conservation Area (NCA), Area (NRA) Includes those lands in Colorado only. This represents a any of the options under Alternative		Probably same as Alternative 3, Option A, but would depend on specific language in any enabling legislation.

<sup>\*1</sup> The missions of the NPS and BLM are uniquely different and affect management. This is also basically true for NPS lands designated as our nation's resources. In reviewing each alternative, one's potential are identified under "MANAGEMENT DIFFERENCES" column. This different management guidelines. For reference purposes, actual use of the area if designated as wilderness.

NPS MISSION  
 Continue to be managed in accordance with BLM's current Resource Management  
 Conserve the scenery and the natural and historic objects and the wildlife therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations (Organic Act 1916)  
 Additional 5,200 acres, which extend into Utah. The total area recommended for

# APPENDIX B ALTERNATIVES MATRIX

ALTER. <sup>*1</sup>	DESCRIPTION OF ALTERNATIVE	ACREAGE INVOLVED			MANAGEMENT DIFFERENCES		
		BLM	PRIVATE	OTHER	GRAZING	WOODCUTTING	MINERALS LEASABLE/SALABLE/LOCATABLE
1 (NPS)	Provides for expanding the boundary of COLM to include all of the lands east of the Utah State line to the west boundary of COLM and then south from the Colorado River to the north rim of Little Dolores River Canyon, Sieber Canyon, and Black Ridge. *2, *3	73,517	3,700	13 Town of Fruita  Water Storage Site	In short term existing permits usually allowed to continue for time specified by Congress in enabling legislation. Eventually all grazing (avg. annual use = 2,388 AUMs, auth. annual use = 4,889 AUMs) would be phased out to promote, as near as possible, a natural ecosystem. Routine use of motorized equipment and unacceptable levels of development to facilitate grazing would preclude consideration for wilderness.	Not Allowed.	Closed to all mineral entry. Valid existing rights are honored, existing claims (577) judged invalid are extinguished. Wilderness recommendations are subject to all mineral interests being relinquished, acquired, exchanged or otherwise being eliminated in the near future.
2 (NPS)	Provides for expanding the boundary of COLM to include all of the lands in Alternative 1 plus the area withdrawn by BLM to protect the scenic values of the Colorado River from the Utah State line east to the Loma boat launch area. This also includes the Fruita Paleontological site. *2, *3	78,701	4,885	13	Same as Alternative 1 except, (avg. annual use = 2,428 AUMs and auth. annual use = 4,939 AUMs).	Same as Alternative 1.	Same as Alternative 1.
3 (BLM)	<b>Option A, Existing Management, (IMP)</b> Includes those lands identified by BLM as WSA in Colorado. BLM will continue to manage the WSA in accordance with the Interim Management Policy and guidelines for lands under wilderness review (IMP). *3	68,737 *4	NA	NA	Allowed at current auth. levels. (Avg. annual use = 2,388 AUMs; auth. annual use = 4,899). Occasional use of mechanized equipment may be justified to repair/restore stock dams & other grazing-related developments. Staff & funding needed to monitor & mitigate potential impacts on paleo/archeo., T&E species & vegetative resources.	Same as Alternative 1.	Closed to all mineral leasing. Open to mineral location. Restrictive development conditions exist because of possible wilderness impairment. Closed to mineral material disposal (sand and gravel, building stone, etc.).
	<b>Option B, Wilderness</b> Includes those lands identified by BLM as WSA in Colorado. If designated as wilderness by Congress, lands will be managed by BLM in accordance with the Wilderness Act of 1964 and the Resource Management Plan. *3	68,737 *4	NA	NA	Same as Alternative 3, Option A.	Same as Alternative 1.	Same as Alternative 1, except approximately 387 claims would be involved.
	<b>Option C, Recreation Lands</b> Includes those lands recommended by BLM for wilderness designation. If Congress decides not to designate as Wilderness, the area will be identified and managed as the Black Ridge Recreation Lands by BLM.	68,737 *4	NA	NA	Same as Alternative 3, Option A.	Potentially open for harvesting. A portion of the WSA was identified as suitable for management and harvest of piñon/juniper.	The area will be closed to mineral leasing except for a half mile buffer around the edge, which could be leased for oil and gas, subject to a no surface occupancy stipulation. BLM will petition the Secretary of the Interior for a withdrawal from mineral location and strict conditions will apply to development of existing mining claims. The area will not be open to mineral material disposal.
4 (BLM)	<b>National Conservation Area (NCA) or National Recreation Area (NRA)</b> Includes those lands identified by BLM in Colorado only. This represents a larger area within which any of the options under Alternative 3 could occur.	118,700	9,000	13	Same as Alternative 3, Option A, except that additional allotments would be included north of river.	Same as Alternative 3, contingent upon the option in effect.	Probably same as Alternative 3, Option A, but would depend on specific language in any enabling legislation.

\*1 The missions of the NPS and BLM are uniquely different and represent an important and necessary concept in the management of our nation's resources. In reviewing each alternative, one must keep in mind that such differences often result in considerably different management guidelines. For reference purposes, the missions are as follows:

## NPS MISSION

Conserve the scenery and the natural and historic objects and the wildlife therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations. (Organic Act 1916)

## BLM MISSION

Provide for the protection (including fire suppression), orderly development, and use of the public lands and resources under principles of multiple use and sustained yield. (FLPMA 1976, Government Manual)

\*2 A change in status to national park would not significantly affect management. This is also basically true for NPS lands designated as wilderness. Any uses that could eventually affect wilderness potential are identified under "MANAGEMENT DIFFERENCES" column. This column also identifies management guidelines that may impact use of the area if designated as wilderness.

\*3 It is assumed that all BLM lands outside the WSA will continue to be managed in accordance with BLM's current Resource Management Plan.

\*4 The BLM recommended wilderness also contains an additional 5,200 acres, which extend into Utah. The total area recommended for wilderness by BLM is 73,937 acres.

ALTS (CONT.)		T	UTILITIES
<b>1 (NPS)</b>	Ma na in re ve wh		Seek feasible alternative routes. If unavailable, work with utility company to minimize visual intrusion. relocate transmission lines within right-of-way so as to minimize visual intrusion.
<b>2 (NPS)</b>	Se		Same as Alternative 1. Status of D&RFW Railroad would not be effected.

	OFF-ROAD VEHICLES	CAMPING	BOATING	FISHING	PACK/SADDLE
<b>1</b> (NPS)	The use of licensed motorized vehicles and mountain bikes limited to designated roads. The use of unlicensed vehicles not permitted	Permitted. Open campfires are prohibited to protect biomass, reduce risk of forest fire and preclude contamination of dateable prehistoric hearth deposits. Backcountry use may be regulated if warranted by increased levels of public use, to discourage crowding and attendant resource impacts	Motorized and nonmotorized craft permitted to land on shore. Public use will be managed to prevent unacceptable impacts.	Permitted subject to State of Colorado regulations.	Permitted. Overnight users may be required to pack in processed feeds to reduce grazing impacts and potential for introduction of exotic plant species.
<b>2</b> (NPS)	Same as Alternative 1.	Same as Alternative 1	Motorized and nonmotorized craft permitted to land on shore. Public use will be managed to prevent unacceptable impacts on aquatic resources or adverse effects on visitor enjoyment.	Same as Alternative 1.	Same as Alternative 1
<b>3</b> (BLM) OPTION A (IMP)	Licensed, and unlicensed vehicles and mountain bikes limited to designated roads. Special permits may be issued for administration of livestock grazing allotments.	Same as Alternative 1 except open fires are generally permitted. Camping can be restricted in areas of concentrated use, i.e., Rattlesnake Canyon and Ruby Canyon along the Colorado River.	Same as Alternative 2	Same as Alternative 1.	Permitted.
<b>OPTION B</b> (WILDERNESS)	Same as Alternative 3, Option A.	Same as Alternative 3, Option A. As noted in GJ-BLM Draft RMP/EIS, primitive rec. use projected to increase 10-15% annually.	Motorized and nonmotorized craft permitted to land on shore. Public use will be managed to prevent unacceptable impacts.	Same as Alternative 1.	Same as Alternative 3, Option A.
<b>OPTION C</b> (REC. LANDS)	Allowed on designated roads and trails. Some roads now closed could be reopened. May be increased trail-oriented ORV use	Same as Alternative 3, Option A	Same as Alternative 2	Same as Alternative 1.	Same as Alternative 3, Option A.
<b>4</b> (BLM) (NCA/NRA)	Some areas could be zoned for ORV use	Same as Alternative 3, Option A	Same as Alternative 2.	Same as Alternative 1.	Same as Alternative 3, Option A

ALTS (CONT.)	&	SOCIO-ECONOMIC IMPACTS
1 (NPS)	search ing on EMTs nforce	Eventual phase out of grazing could have an adverse impact on individual permittees. Any economic benefits of sport hunting would be adversely impacted by its elimination. These adverse impacts would be offset at least partially, if not fully, by increased attraction to the area due to traditional name recognition of NPS areas. Watchable wildlife opportunities would at least partially offset any adverse impact of hunting closure.
2 (NPS)		Same as Alternative 1.
3 (BLM) OPTION A (IMP)	h one search limited Wildlife te and	Little change from present.
OPTION B (WILDERNESS)		Same as Alternative 3, Option A.
OPTION C (REC. LANDS)		Same as Alternative 3, Option A.
4 (BLM) (NCA/NRA)		Could vary depending on management emphasis and zones.

ALTS (CONT.)	MANAGEMENT DIFFERENCES			
	COLLECTING	DOGS	LAW ENFORCEMENT/SEARCH & RESCUE	SOCIO-ECONOMIC IMPACTS
<b>1 (NPS)</b>	Casual collecting is not permitted. All resource values are fully protected. Collecting of non-endangered plants, animals, and geologic specimens and fossils for serious academic research may be authorized by specific permit.	Permitted in vehicles and on leashes in developed areas. To eliminate potential for conflicts with other visitors and impacts on wildlife, not permitted on trails or in the backcountry.	NPS maintains round-the-clock law enforcement and search and rescue liability, with four commissioned rangers living on site. EMS capability includes four Colorado certified EMTs living on site. Concurrent jurisdiction enables NPS to enforce broad spectrum of both State and Federal laws.	Eventual phase out of grazing could have an adverse impact on individual permittees. Any economic benefits of sport hunting would be adversely impacted by its elimination. These adverse impacts would be offset at least partially, if not fully, by increased attraction to the area due to traditional name recognition of NPS areas. Watchable wildlife opportunities would at least partially offset any adverse impact of hunting closure.
<b>2 (NPS)</b>	Same as Alternative 1	Same as Alternative 1.	Same as Alternative 1.	Same as Alternative 1.
<b>3 (BLM) OPTION A (IMP)</b>	Collecting of rock specimens permitted. No vegetative matter can be collected without a permit. Collecting permits may be issued for serious academic research.	Permitted	BLM maintains round-the-clock law enforcement with one commissioned ranger not living on site. Coordinates search and rescue under direction of Mesa County Sheriff. Limited EMS capability. Proprietary jurisdiction and State Wildlife authority enable BLM ranger limited enforcement of State and Federal Laws.	Little change from present.
<b>OPTION B (WILDERNESS)</b>	Same as Alternative 3, Option A.	Same as Alternative 3, Option A.	Same as Alternative 3, Option A.	Same as Alternative 3, Option A.
<b>OPTION C (REC. LANDS)</b>	Same as Alternative 3, Option A.	Same as Alternative 3, Option A.	Same as Alternative 3, Option A.	Same as Alternative 3, Option A.
<b>4 (BLM) (NCA/NRA)</b>	Same as Alternative 3, Option A.	Same as Alternative 3, Option A.	Same as Alternative 3, Option A.	Could vary depending on management emphasis and zones.

ALTS (CONT.)		FACILITIES DEVELOPMENT
1 (NPS)	Congress, in any bill, include or exclude water rights would be under State law, the new reservation necessary to protect purpose.	Would be determined upon completion of General Management Plan but immediate concerns would include sanitary facilities in areas of concentrated visitor use and routine grading of access road to Rattlesnake Canyon. Additional facilities restricted to developed zones along perimeter. If designated as wilderness facilities, would be limited to the types and number essential to meet minimum requirements for administration as wilderness area.
2 (NPS)	Same as Alternative 1.	Same as Alternative 1.
3 (BLM) OPTION A (IMP)	The only situation considered for another river designation, water rights.	To date, developments limited to signing, delineation of trails and trailhead parking and the grading of road to Rattlesnake Canyon Arches and the Loma Launch site. Any future development will be consistent with the RMP and related program activity plans.
OPTION B (WILDERNESS)	Same as Alternative 3.	Same as Alternative 3, Option A.
OPTION C (REC. LANDS)	Same as Alternative 3.	Same as Alternative 3, Option A, plus through revisions to the RMP, area could be open to new development based on the multiple-use concept and administrative needs.
4 (BLM) (NCA/NRA)	Same as Alternative 3.	Depending on zones, some development may be needed.

ALTS (CONT.)	MANAGEMENT DIFFERENCES			
	WATER RIGHTS	PRIVATE LANDS	MANAGEMENT OF LANDS & ACCESS BY ONE AGENCY	FACILITIES DEVELOPMENT
1 (NPS)	Congress, in any future enabling legislation, could specifically include or exclude reserve water rights. If included, any water rights would come from water then unappropriated under State law, would have a priority date as of the date of the new reservation, and would be for the minimum amount necessary to prevent defeat of the reservation's primary purpose.	Long-range goal is to acquire all private lands within park on willing seller/buyer basis. Lands would be restored as near as possible to natural condition. Proposed development, if contrary to park values, could result in acquisition by condemnation.	Primary overland access to area is through Colorado National Monument. Under NPS management, there would be a uniform policy relative to recreation fees, public information, and resource and visitor protection.	Would be determined upon completion of General Management Plan but immediate concerns would include sanitary facilities in areas of concentrated visitor use and routine grading of access road to Rattlesnake Canyon. Additional facilities restricted to developed zones along perimeter. If designated as wilderness facilities, would be limited to the types and number essential to meet minimum requirements for administration as wilderness area.
2 (NPS)	Same as Alternative 1.	Same as Alternative 1.	Same as Alternative 1.	Same as Alternative 1.
3 (BLM) OPTION A (IMP)	The only situation where reserved water rights could be considered for any BLM management option would be scenic river designation. No other designations would confer reserved water rights.	Long-range goal in WSA is to acquire all private lands on willing seller/buyer basis. Outside WSA goal is to acquire for needed developments, resource protection, access, and/or for manageability of the area. Agency has authority to negotiate land exchange.	Primary overland access to area is through Colorado National Monument. Potential for conflicts relating to imposition of recreation fees. NPS and BLM will continue to work cooperatively to provide visitor information.	To date, developments limited to signing, delineation of trails and trailhead parking and the grading of road to Rattlesnake Canyon Arches and the Loma Launch site. Any future development will be consistent with the RMP and related program activity plans.
OPTION B (WILDERNESS)	Same as Alternative 3, Option A.	Same as Alternative 3, Option A, except the term WSA above would be substituted with the word "wilderness".	Same as Alternative 3, Option A.	Same as Alternative 3, Option A.
OPTION C (REC. LANDS)	Same as Alternative 3, Option A.	Same as Alternative 3, Option A, except the term WSA would be substituted with the words "Recreation Lands."	Same as Alternative 3, Option A.	Same as Alternative 3, Option A, plus through revisions to the RMP, area could be open to new development based on the multiple-use concept and administrative needs.
4 (BLM) (NCA/NRA)	Same as Alternative 3, Option A.	Same as Alternative 3, contingent on the option in effect.	Same as Alternative 3, Option A.	Depending on zones, some development may be needed.

ALTS (CONT.)		
		SHOOTING
1 (NPS)	ally to age ally rol. ble	Loaded weapons of any kind not permitted in NPS units in order to provide for visitor safety and to reduce potential for poaching and vandalism.
2 (NPS)		Same as Alternative 1.
3 (BLM) OPTION A (IMP)	ns.	Generally permitted. Target shooting can be restricted in areas of concentrated use (examples - Rattlesnake Canyon arches, Ruby Canyon and Loma Boat Launch). Entire area however would remain open to hunting.
OPTION B (WILDERNESS)		Same as Alternative 3, Option A.
OPTION C (REC LANDS)		Same as Alternative 3, Option A.
4 (BLM) (NCA/NRA)		Same as Alternative 3, Option A.

ALTS (CONT.)	MANAGEMENT DIFFERENCES			
	VISITOR SERVICES	PUBLIC ACCESS	HUNTING	SHOOTING
1 (NPS)	Information, interpretation & visitor assistance services available on site 7 days/week at existing facility adjacent to resource. Scheduled services provided during peak seasons through ranger-guided walks & campfire programs. Publications available throughout the year. Special programs available on request.	NPS works toward encouraging public access where private lands prevent same through easements and land acquisition. Provide access through trailheads and primitive trails. Vehicular access restricted to perimeter of area. River access by motorized and non-motorized craft.	Not permitted except where specifically authorized by Federal law. Reduced ability to control wildlife numbers may result in damage problems to adjacent lands. This may be partially offset by elimination of predator control. Probable Increase in opportunity for watchable wildlife.	Loaded weapons of any kind not permitted in NPS units in order to provide for visitor safety and to reduce potential for poaching and vandalism.
2 (NPS)	Same as Alternative 1.	Same as Alternative 1.	Same as Alternative 1.	Same as Alternative 1.
3 (BLM) OPTION A (IMP)	Visitor Information and publications are available at BLM offices during regular hours and at cooperating visitor centers seven days a week. BLM personnel are also on duty during critical weekends or holidays.	Agency proposes acquiring some private lands blocking access. Vehicles restricted to Rattlesnake Canyon access and perimeter of study area. River access by motorized and non-motorized craft.	Permitted subject to State hunting regulations.	Generally permitted. Target shooting can be restricted in areas of concentrated use (examples - Rattlesnake Canyon arches, Ruby Canyon and Loma Boat Launch). Entire area however would remain open to hunting.
OPTION B (WILDERNESS)	Same as Alternative 3, Option A.	Same as Alternative 3, Option A.	Same as Alternative 3, Option A.	Same as Alternative 3, Option A.
OPTION C (REC LANDS)	Same as Alternative 3, Option A.	Certain roads could be reopened. River access by motorized or nonmotorized craft.	Same as Alternative 3, Option A.	Same as Alternative 3, Option A.
4 (BLM) (NCA/NRA)	Same as Alternative 3, Option A.	Agency proposes acquiring some private lands blocking public access. Vehicle access south of Colorado River restricted to Rattlesnake Canyon and perimeter of study area. North of river existing roads and trails would remain open.	Same as Alternative 3, Option A.	Same as Alternative 3, Option A.

RMR/BLCA, COLM

## Memorandum

To: Superintendent, Black Canyon National Monument  
Superintendent, Colorado National Monument

From: Chief, Water Rights Branch, Water Resources Division

Subject: Possible Unit Expansions—Water Rights Implications

As requested of the Chief, Water Resources Division, the following assessment of the water rights implications of the possible expansion of Colorado National Monument (COLM) and Black Canyon of the Gunnison National Monument (BLCA) is prepared for your information.

It is our understanding that integral to deliberations surrounding possible expansion of BLCA and COLM is the issue of Federal reserved water rights. Specifically at issue is Congressional language to explicitly exclude such water rights from the enabling legislation. This memorandum is prepared to provide perspective on the ramifications of such action.

**RECENT TRENDS**

Until recently, the creation of a National Park, Monument, Forest, or other Federal reserve has not been attended by the explicit reservation or rejection of water rights under the Federal reserved water rights doctrine. However, the creation of Great Basin National Park, and El Malpais, Hagerman Fossil Beds, and City of Rocks National Monuments has seen the inclusion in their enabling legislation of explicit language regarding Federal reserved water rights. This language (attached) has neither uniformly embraced nor rejected such rights. To understand the meaning of such language, it is appropriate to briefly describe the history and nature of the Federal reserved water right before proceeding further.

**BACKGROUND**

First, it is important to note that the Federal reserved water rights doctrine is a creation of the courts. It began in 1908 with a finding by the U.S. Supreme Court regarding an Indian reservation. The Court determined that, even though there was no treaty language addressing water rights and State law governed the ownership of the right to use water, water rights were engendered by the Federal Government's creation of the Fort Belknap Indian Reservation. The doctrine was gradually expanded until the early 1970's when the Court began to limit its application.

In summary, a simplistic description of the doctrine of reserved rights is—a right for the Federal Government to use unappropriated water arises, by implication, on the date of (and by the act of) the Federal Government's creation from the Public Domain of a reservation for specific purposes. The water right is for the primary purposes of that reservation and is only for the minimum amount necessary to prevent the defeat of those purposes.

#### THE COLM/BLCA SITUATION

On the basis of the foregoing we may view the COLM/BLCA situation as follows. Any reserved water rights created, implied, or explicitly stated in the enabling legislation, would come from water then unappropriated under State law, would have a priority date as of the date of the new reservation, and would be for the minimum amount necessary to prevent defeat of the reservation's primary purposes. As a practical matter, such a water right would not likely be very good in this particular instance. It would be in a basin whose water has been allocated under terms of an interstate compact and, within the State, is probably fully appropriated. A late 1980's or early 1990's priority date would have little real significance in providing water for the reservation. Furthermore, because the Federal reserved water right is for the minimum amount to prevent defeat of the primary purposes of the reservation, significant debate would likely surround the determination of the quantity of water actually reserved.

It is important to note that a water right, even a very junior one, has implications which could be viewed as either problematical or advantageous, depending upon perspective. In Colorado, as in most western states, changes in existing water rights (e.g., changes in location of diversion and/or use and changes in timing or type of beneficial use) must be approved by the State through either court or administrative action. Before such changes are approved, however, it must be demonstrated that junior appropriators will not be injured. Such a determination may be made more difficult by the existence of a Federal reserved water right, especially if that right were for in situ uses such as instream flow or environmental protection/enhancement. Thus, those interests which look for future changes in water development may perceive a Federal reserved water right, implicit or expressed, as a potential limitation upon future development opportunities.

On the other hand, while actual amounts of water which could be secured for present and future use may be limited, a Federal reserved water right could provide a limited degree of assurance that existing resource conditions may be protected into the future. Further, in view of the fact that water deliveries are required to downstream states and the Federal reserved water right might be non-consumptive in nature, a late date reserved right could possibly be created and met through interstate deliveries. The shortcoming of such a scheme would probably be found in the longer term average nature (10-year mean) of the delivery requirement in contrast to the annual needs of a National Park/Monument.

#### WILDERNESS

Because part of the land proposed for expansion is now a wilderness study area under Bureau of Land Management jurisdiction, another aspect of the COLM/BLCA situation that needs to be considered is Federal reserved water rights associated with wilderness designation. This was the focus of a Supplemental

Solicitor's Opinion dated July 26, 1988, which was affirmed in a memorandum signed by the Attorney General on July 28, 1988. Briefly, the opinion concludes that, without express language to the contrary, Federal water rights are not reserved when wilderness areas are designated. The opinion reasoned that Congress intended that the original reservation of the land, be it National Forest, National Park, or National Preserve, would carry with it water rights sufficient for primary reservation purposes. Subsequent wilderness designation was a "secondary purpose" for which no water was reserved. The original reserved water rights would be sufficient for the new "purposes."

However, in the case of most of the land administered by the BLM, designation as wilderness would likely be the original reservation. Thus, it could be argued that water should be reserved for wilderness purposes. Ignoring, for argument's sake, the Supplemental Solicitor's Opinion, the designation of a wilderness overlying a National Monument could be viewed as a new reservation, even though secondary, which could be construed to expand the purposes of the area and thereby expand the reserved water rights. In either case, these water rights would carry a priority date coincident with the date of reservation as wilderness and would have the characteristics of junior water rights discussed earlier.

Having said this, it should be noted that the Supplemental Solicitor's Opinion stands and designation of land in Colorado as wilderness is doubtful in the near future because the question of water rights continues to be debated.

The decision to include in enabling legislation language addressing reserved water rights rests with elected representatives. So, too, the decision to embrace or reject such rights. With regard to National Park Service (NPS) management of these areas if expanded, the existence of such a right could provide the NPS with opportunity to limit, through action by the State in its protection of junior water rights holders, impacts to primary reservation purposes. However, this opportunity represents uncertainty and potential conflict in the eyes of those who have expectations of future water resource development or change.

I hope this information is of value to your assessment effort. If additional assistance, clarification, or background information is required, please call me at (303) 221-8301. If a legal opinion is needed from either the Office of the Solicitor or the Department of Justice, the Water Resources Division will be happy to assist in the formulation of a request.

## **GLOSSARY OF ACRONYMS**

<b>ACEC</b>	Area of Critical Environmental Concern
<b>AUM</b>	Animal Unit Month
<b>BLM</b>	Bureau of Land Management
<b>COLM</b>	Colorado National Monument
<b>DOW</b>	Division of Wildlife
<b>FLPMA</b>	Federal Land Policy and Management Act
<b>IMP</b>	Interim Management Policy
<b>NCA</b>	National Conservation Area
<b>NM</b>	National Monument
<b>NP</b>	National Park
<b>NPS</b>	National Park Service
<b>NRA</b>	National Recreation Area
<b>ORV</b>	Off-Road Vehicle
<b>PSD</b>	Prevention of Significant Deterioration
<b>RMP</b>	Resource Management Plan
<b>RNA</b>	Research Natural Area
<b>SRP</b>	Special Recreation Permit
<b>TSP</b>	Total Suspended Particulates
<b>USGS</b>	United States Geological Survey
<b>VRM</b>	Visual Resource Management
<b>WSA</b>	Wilderness Study Area

## GLOSSARY

**AIR QUALITY CLASSES.** Classifications established under the Prevention of Significant Deterioration portion of the Clean Air Act, which limits the amount of air pollution considered significant within an area. Class I applies to areas where almost any change in air quality would be significant; Class II applies to areas where the deterioration normally accompanying moderate well-controlled growth would be considered insignificant; and Class III applies to areas where industrial deterioration would generally be considered insignificant.

**ALLOTMENT.** An area of land where one or more operators graze their livestock. It generally consists of public lands, but may include parcels of private. The number of livestock and period of use are stipulated for each allotment.

**ANIMAL UNIT MONTH.** The amount of forage necessary to sustain one cow or its equivalent for a period of one month.

**BIG GAME.** Larger species of wildlife that are hunted, such as elk, deer, bighorn sheep, and pronghorn antelope.

**CANDIDATE SPECIES.** Any species not yet officially listed, but which are undergoing a status review or are proposed for listing according to Federal Register notices published by the Secretary of the Interior or the Secretary of Commerce.

**CONCURRENT JURISDICTION.** The United States and the State jointly hold and exercise all powers of enforcement. Thus, the United States may enforce not only Federal laws and regulations, but also assimilate and enforce applicable State statutes.

**CRITICAL RANGE.** The portion of land used by a population or herd of a wildlife species that is vital to the survival of that population or herd.

**CULTURAL RESOURCES.** Those fragile and non-renewable remains of human activity, occupation, or endeavor reflected in districts, sites, structures, buildings, objects, artifacts, ruins, works of art, architecture, and natural features that were of importance in human events.

**ENDANGERED SPECIES.** Any species, or significant population of the species, in danger of extinction throughout all or a significant portion of its ranges. Usually refers to those on lists of species recognized by Federal and State governments to be endangered.

**ENVIRONMENTAL IMPACT STATEMENT (EIS).** A formal public document prepared to analyze the impacts on the environment of a proposed project or action and released for comment and review. An EIS must meet the requirements of NEPA, CEQ guidelines, and directives of the Agency responsible for the proposed project or action.

**EXISTING ROADS AND TRAILS.** Roads and trails identified through a road inventory process.

**FEDERAL LAND POLICY AND MANAGEMENT ACT (FLPMA).** The Federal Land Policy and Management Act of 1976 (Public Law 94-579, 90 Stat. 2743, 43 USC 1701).

**GENERAL MANAGEMENT PLAN.** A plan that sets forth the management concepts for park units; establishes a role for the units within the context of regional trends and plans for conservation, recreation, transportation, economic development, and other regional issues; and identifies strategies for resolving issues and achieving management

objectives, usually within a period of 15 years. All other plans are consistent with the direction established in this lead planning document. No new development or major rehabilitation may be undertaken without an approved GMP.

**HABITAT.** A specific set of physical conditions that surround a single species, a group of species, or a large community. In wildlife management, the major components of habitat are considered to be food, water, cover, and living space.

**HABITAT SITE.** A mapped unit of land containing a distinct set of vegetation characteristics.

**LEASE.** An instrument through which interests are transferred from one party to another, subject to certain obligations and considerations.

**LEASABLE MINERALS.** Those minerals or materials designated as leasable under the Mineral Leasing Act of 1920. They include coal, phosphate, asphalt, sulphur, potassium and sodium minerals, and oil and gas. Geothermal resources are also leasable under the Geothermal Steam Act of 1970.

**LOCATABLE MINERALS.** Minerals or materials subject to claim and development under the Mining Law of 1872, as amended. Generally includes metallic minerals such as gold and silver, and other materials not subject to lease or sale (some bentonites, limestones, talc, some zeolites, etc.). Whether or not a particular mineral deposit is locatable depends on such factors as quality, quantity, mineability, demand, and marketability.

**MINERAL ENTRY.** Claiming public lands (administered by the BLM) under the Mining Law of 1872 for the purpose of exploiting minerals. May also refer to mineral exploration and development under the mineral leasing laws and the Material Sale Act of 1947.

**MINERAL MATERIALS.** Common varieties of sand, building stone, gravel, clay, moss rock, etc., obtainable under the Minerals Act of 1947, as amended.

**MULTIPLE-USE.** Management of the various surface and subsurface resources so that they are jointly utilized in the manner that will best meet the present and future needs of the public, without permanent impairment of the productivity of the land or the quality of the environment.

**OFF-ROAD VEHICLE (ORV).** Any motorized vehicle capable of or designed for travel on or immediately over land, water, or other natural terrain. (Same as off-highway vehicle [OHV].)

### OFF-ROAD VEHICLE DESIGNATIONS.

**OPEN.** Designated areas and trails where off-road vehicles may be operated (subject to operating regulations and vehicle standards set forth in BLM Manuals 8341 and 8343).

**LIMITED.** Designated areas and trails where the use of off-road vehicles is subject to restrictions such as limiting the number or types of vehicles allowed, dates and times of use (seasonal restrictions), limiting use to existing roads and trails, or limiting use to designated roads and trails. Under the designated roads and trails designation, use would be allowed only on roads and trails that are signed for use. Combinations of restrictions are possible such as limiting use to certain types of vehicles during certain times of the year.

**CLOSED.** Designated areas and trails where the use of off-road vehicles is permanently or temporarily prohibited.

Vehicle use can be permitted for emergency purposes and special permitted uses.

**OUTSTANDING.** 1. Standing out among others of its kind; conspicuous; prominent. 2. Superior to others of its kind, distinguished, excellent.

**PARK LAND.** Land administered by the National Park Service.

**POST-FLPMA.** After October 21, 1976, the date of approval of the Federal Land Policy and Management Act.

**PRE-FLPMA.** Before October 21, 1976, the date of approval of the Federal Land Policy and Management Act.

**PROPRIETARY JURISDICTION.** The United States enjoys all the rights of a private landowner and may also enforce certain Federal regulations and laws. It lacks, however, the legislative authority to assimilate and enforce any State statutes.

**ROAD.** Vehicle routes that have been improved and maintained by mechanical means to ensure relatively regular and continuous use.

**SIGNIFICANT.** Representing an outstanding example of a particular type of resource, possessing exceptional value or quality, offering superlative opportunity for recreation, public use and enjoyment, and retaining a high degree of integrity as a true, accurate and relatively unspoiled example of a resource.

**SOLITUDE.** 1. The state of being alone or remote from habitations; isolation. 2. A lonely, unfrequented, or secluded place.

**THREATENED SPECIES.** Any species, or significant population of that species, likely to become endangered within the foreseeable future throughout all or a significant portion of its range. Usually includes only those that have been recognized and listed as threatened by Federal and State governments.

**VALID EXISTING RIGHTS.** Legal interests that attach to a land or mineral estate that cannot be divested from the estate until that interest expires or is relinquished.

**VISUAL RESOURCE.** Land, water, vegetation, animal and other visible features.

**VISUAL RESOURCE MANAGEMENT (VRM).** The inventory and planning actions taken to identify visual values and to establish objectives for managing those values; and the management actions taken to achieve the visual management objectives.

**VISUAL RESOURCE MANAGEMENT (VRM) CLASSES.** Identify the degree of acceptable visual change within a characteristic landscape. VRM classes are assigned to public land through management decision, using the guidelines of scenic quality, visual sensitivity, and visibility. The value of land uses that may be affected plays an important, constraining role in determining VRM decisions.

**CLASS I:** Preserve the existing character of the landscape. Includes congressionally authorized areas (e.g., wilderness) and areas approved through the RMP where the goal is to provide a landscape that appears unaltered by man.

**CLASS IV:** Provide for management activities which require major modification of the landscape. The level of change to the characteristic landscape can be high.

Management activities may dominate the view and be the major focus of viewer attention. However, every attempt should be made to minimize the impact of these activities through careful location, minimal disturbance, and other landscape management practices.

**WILDERNESS.** An area formally designated by Act of Congress as part of the National Wilderness Preservation System. The definition contained in Section 2(c) of the Wilderness Act of 1964 (78 Stat. 891). "A wilderness in contrast with those areas where man and his own work dominate the landscape is hereby recognized as an area where the earth and its community of life are untrammelled by man, where man himself is a visitor who does not remain. An area of wilderness is further defined to mean...an area of undeveloped Federal land retaining its primeval character and influence, without permanent improvements or habitation, which is protected and managed so as to preserve its natural conditions which (1) generally appears to have been affected primarily by the forces of nature, with the imprint of man's work substantially unnoticeable; (2) has outstanding opportunities for solitude or primitive and unconfined types of recreation; (3) has at least five thousand acres of land or is of sufficient size as to make practicable its preservation and use in an unimpaired condition and (4) may also contain ecological, geological or other features of scientific, educational scenic, or historical value."

**WILDERNESS STUDY AREA (WSA).** A roadless area determined to have wilderness characteristics as described in Section 603 of FLPMA and Section 2(c) of the Wilderness Act of 1964 (78 Stat. 891).

**WITHDRAWAL.** An action which restricts the use of public land and segregates the land from the operation of some or all of the public land and mineral laws. Withdrawals are also used to transfer jurisdiction of management of public lands to other Federal Agencies.
